Blood moon minecraft command

From Feed The Beast Wiki Bloodmoon is a mod created by Lumien. This mod adds a lunar event in which the moon is red blood, and causes an increased spawning speed of enemy creatures. The moon, sky and earth will have a foggy red tint during this event. Enemy creatures will appear much more often and closer to the player, on the surface of the world. The event of the blood moon has no effect on the spawning of the underground mafia (e.g. in caves). By default, a blood moon event has a 5% chance of performing every night. When it starts, you'll see a chat message that says: Blood Moon is rising.... Mod adds a configuration option that will prevent players from sleeping for nights when a blood moon event occurs. It also adds a configuration option that will cause all mobs to be born during the blood moon event when the sun rises.
