Years later, Gray decided to move on to other things, and the cone shifted gears to the baby gear, which he teamed up with an engineer. Their first product is a children's swing inspired by an external glider used for newborn soothing by a colleague. The unique swing was a moment's hit and put Graco on the baby's product card. Graco is already one of the world's leading manufacturers of baby products. Performance comparison Jetsetter Graco folds to third parties to make a compact shape suitable for those with limited space. Credit: Brech Watford The Jetsetter is 13.7 lbs and measures 4,246 cubic inches when folded. The folded size is relatively small, with only 3 other trolleys folding smaller. However, the smallest product in the review is almost half the size, so if space is a commodity for you, smaller options are available. The weight is heavier than average, with much of the competition weighing less. The Jetsetter has a carry-on bag that long-term storage. Credit: Abriah Wofford The Jetsetter comes with a carry case that can be useful for traveling with your stroller, especially if you plan to check it out at an airport. Jetsetter scored above average for ease of use with functionality that is a little intuitive and natural. Credit: Abriah Wofford Ease of Use The Jetsetter is relatively easy to use with results that may sound low but are still good compared to the competition of umbrellas that are traditionally lacking. Fold and unfold this Graco with one hand folded and stand by itself once folded. There's no lock, but it's closed without one. This trolley folds to third, resulting in a shorter, more compact package than the other umbrella folding options. The folding results are that your seat hits your arm/arm (see video below), which is not painful, but looks poorly designed. Brakes Brakes Jetsetter brakes are one action with a pedal located next to the wheel (top right). While the pedal is small, it's easy to press and release with a smooth enough edge to use comfortably while wearing sandals. Warehouse container Jetsetter storage has a maximum weight permissible 10 lbs. We were able to fit our medium-sized diaper bag inside. Access is about medium with a better distance at the back (top left) than the front (top right). There's not much room when the diaper bag is in there. This Graco has a pocket for car seat adapters. Jetsetter's canopy is larger than Brusco's on Graco Breeze, but there's no window that's annoying to some parents. Credit: Abriah Wofford Sunshade This Graco has a large canopy with a UV 50 rating and no peek-a-boo window. The canopy does the job better than many umbrellas, but does not match the impressive canopies of some of the competition. Jetsetter's straps connect to the waist belts before entering the lock, which is placed and can be difficult to increase the likelihood that some parents will disavow the belt altogether. Win: The Watford Jets are not our favourite buckle. The buckle has two parts where the straps can be separated from the waist strap. They always fall apart when they're slothing. Jetsetter has an adjustable leg rest, but the slope is not very deep leaving heads to lie down while napping. Credit: Abriah Wofford Seat This Graco seat has a sling-style seat pad. The leg rest is adjustable with a narrow leg, which will hold only heels. It has a medium level of wrapping with a plastic switch that is easy to tilt and harder to lift. Jetsetter is compatible with all Graco Click Connect child seat carriers and can be used without removing the canopy. Credit: Abriah Wofford Car Seat Compatibility This trolley is compatible with all Connect Connect graco car seat holders. Adapters come with the trolley and you don't need to remove the canopy to attach the supporting structure to the frame. Easy setting Jetsetter took us almost 5 minutes to assemble without tools. The leadership is not remarkable, but it is not disappointing. Jetsetter is the hardest cart in the review to press and turn. Credit: Abriah Wofford's manoeuvring Although we prefer a style of wheels in front with one wheel on each leg, jetsetter is hard to push and spin with one of the lowest test scores in the group. The front wheels are small and plastic (above left) with the ability to lock the rotating wheel in place (above right) to push over rougher terrain where the rotating wheels can struggle. Jetsetter's frame has a lot of flex and this makes pushing difficult, the more you press, the more it bends before it starts rolling. Although difficult on flat and paved surfaces, it grows more difficult as the road becomes uneven. Graco's Jetsetter uses lower quality materials that come together to form a product with a significantly flexible feel and a slight feel. Credit: Brya Woffer Quality Jetsetter undergoes compared to quality competition. While Jetsetter has a lower price than some of the competition, materials and construction are still disappointing compared to similar price options with several products scoring higher at lower prices. The materials and the way the trolley is produced lead to a cheaper, fragile feel product.
