Cans and pots improve drainage and create air bags for better aeration and healthier soil. Check out this lawn and yard maintenance and gardening tips. Our experts are weighing on the best tips on how to get healthy and beautiful lawns and gardens. Family handyman lay on the edge of the lawn, garden, or flower bed, 2x6. Drive a flat spade along the edge of the board while you are kicking the board. Move the board as needed to create a clean, straight line. Check out this 23 hack tools that'll make your life easier. These simple and smart updates for everyday yard tools will make outdoor chores much easier this season. Family Handyman Family Handyman Do You Have a Hard Time To Start Seeding or Cutting? Try a soda bottle greenhouse. Cut a 2 liter soda bottle and remove the label. Each seed gets its own micro greenhouse! If the seeds germinate and the cutting takes root, remove the greenhouse. You've also checked out these 10 creatives. Hacking will improve your life. This home hack solves everyday problems with the stuff you already have. Family Handyman is an easy and green way to start seeds, store toilet paper and paper towel tubes. Cut the tube to 2 in length and place it on a waterproof tray. Fill the tube with potted soil and plant seeds. When the seedlings are ready to go to the garden, they are planted directly in a cardboard tube. The corrugated cardboard is disassembled. The tube should be placed below the surface of the soil, so it does not dehydrate the roots. Check out 20 great ways to use hangers, rubber bands and corrugated tubes around your house. Family handyman fertilizer is needed to get fertilizer to the base of plants such as bushes or other dense plants, so I use a length of 2 PVC. Push one end to the plant base and pour the fertilizer into the pipe. Cut the top of the pipe at 45 degrees and pour it into the fertilizer and give a larger opening. – Check out Gordon R. Watson for this 10 grass management myth that you really need to stop believing. To cope with this problem, cut the old sponge and place it on the bottom of the pot. The sponge retains moisture and creates the necessary air space. It also prevents water from flowing to the floor. The sponge acts as a water sanctuary and keeps the soil moist. Getting a family handyman flower and mulch close to the bushes makes it easier if the mulch is in a small container. So I place the bucket and the barrel in the cart and fill it with mulch. It doesn't matter if the mulch misses the bucket and lands on the cart. When you dump a bucket, you roll it out of the open space for what is left in the cart. — When Eric Swartz is next to the lunch salad bar, save the plastic shell container. It can be reused as a mini greenhouse for starting seeds in the spring. Wash the container thoroughly at the end of lunch. Use awl and hammer to drill a few small holes in the top part of the container to airflow. Then fill the bottom half with potting mix or soil to start your own special seed. Plant the seeds and spread them into containers as suggested in the seed packet. Drink the seeds a little bit of water and close the lid. Place your courage in a clear place and patiently wait for the seeds to sprout! The transparent plastic container acts like a greenhouse, allowing the sun and warmth to reach the plant while maintaining moisture. A clean coffee cup with a lid makes a great water ingenues. The hole in the lid is the perfect size for slowly pouring water, so do not spray water on the plant. This fast watering is especially useful for plants such as aloe vera and cactus that do not require much water. Or, in the case of an office factory, go clean Cups with lids are usually readily available. Wash the cup, thoroughly rinse the lid and reuse it as waterable. Every spring, I spend a lot of time decorating my deck with flowers. I love porting seedlings, spilling water every day, relaxing in lounge chairs and enjoying their beauty. But there's one thing that has driven nuts. I had trouble keeping the dust flowing out of the bottom of my pots when I asked them. I tried to use a larger stone on the bottom of the pot, but it didn't completely solve the problem. The solution was to place the coffee filter on the bottom of the pot before filling it with dust. A coffee filter does not stop dust and let the plant flow through water while the water flows. Now I can fix one of my little pet and move on to my life! — Kevin Daniel Plus: 12 DIY potted boxes to build in a day. I can only water one, so I need to refill all the water of the plant 4-5 times in my patio. Use an old milk kettle instead of buying more expensive watering cans. I drill a few holes in the cap, fill the kettle with water and I'm good. — Harrison Berg Epsom Salt (magnesium hydration sulfate) is known for home remedies, but the garden may be the most luminous place. Like fertilizers purchased in stores, Epsom salts contain magnesium, which helps germinate seeds, produce chlorophyll, and absorb important nutrients such as nitrogen and phosphorus. Most plants grow better at a rate of 2 teaspoons of water per month. It can also be diluted with water in the bottle and applied with foliar spray. Leaving the plant in fog greatly increases growth. This works especially well on vegetables and roses. — Taylor Peterson We spend a lot of time planting, modifying, and watering our flowers. On one occasion, he dragged a hose across the yard and accidentally destroyed flowers across the garden. My solution was to use wickets in my croquet set to create a path for the hose. When I was given water, I fed the hose through the ticket gates and kept my flowers safe. — Ryne Rover Plus: Build a comfortable cedar bench for your backyard with this easy-to-follow project plan. Getting my vines runs the way I want it tricky. To create a vine, tie the zipper tie around the stem and tie it to everything that is stable. Do not tie the vines too tightly. They must be able to move and grow. — Craig Sullivan checks out another amazing zip tie hack. The family handyman went to terracotta potted plantmaking, a brick vendor and bought a clay chimney year liner 3 feet long (\$15 each). Cut to different heights using a circular saw fitted with abrasive cutting wheel. You can put it on the deck or patio, or accent the yard where you want - just pick your spots and bury them A little in the soil. Fill the liner with gravel for drainage, leave 8 and port the soil. Because water can be drained, freezing will not break the liner. Or put a pot on the gravel and bring the plants during the winter. — Nancy Belmont Family Handyman is very useful for landscaping projects with nothing but durable waterproofing. Excellent for moving leaves, weeds, soil and small rocks (among other materials) quickly and safely when working in the yard. It can also be used to cover plants or landscaping materials on truck beds when transporting trucks, or to protect projects from fierce storms. Don't leave a tarpaulin lying on the lawn for too long, and you can kill the grass. Check out this pro grass and garden tip. Hidden behind shrubs near the Family Handyman Garden, the mailbox provides a convenient home for tools. A small mailbox like this costs less than \$20 in hardware stores and home centers. A king-size model costs about \$35. — Lean sample DIYers tend to accumulate all sorts of tools for all kinds of projects. But the key to maintaining efficiency is always to make sure you have the right tools in your hand. Check out these 21 ideas to keep your tools organized! Family handyman we have a really big vegetable garden and I'm older, so I have to spend less time bent on my hands and knees, the better. When he was ready to plant new vegetables, he set aside the soil and picked up the hole excavator. Just jump into the soil for one or two each plant and have a perfectly sized hole for all my crops! — Barbara McGreefamily Handyman pickup trucks are great for carrying big objects, but small objects have a way to slide around. To solve the problem, I made a simple caddy in 2x4s and fixed it with deck screws. Parcels help you keep small items, such as nurseries. — Make this hack for tom lawson truck bed to reach the stick. When a family handyman brings new flowers or shrubs to my garden, I don't spice them up in their plastic pots by stem because it can hurt the plants. Instead, I use a sharp knife to cut two or more sides of each pot, be careful not to tear the roots when liberating the plants and separating the soil from the container. — Leslie PoehlerFamily Handyman Hack ensures that the tools are always ready and clean. Find a pot or a small bucket and fill it with clean sand. Take some of the most used landscaping tools and hold them in the sand - they stand upright and are easy to catch this way. At the end of the day, spray a quick coat of mineral oil and tools and put them back in the sand. Over time, a combination of mineral oil and sand will help to clean the tool and avoid dulling it quickly. Check out this fun backyard project! Family Handyman Grapefruit, Orange and Other Citrus Peels This is the right size to start a new seedling. I make a hole at the bottom of each one for drainage and add the seeds with a wet seed start mix. Then, when it's time to move out, I plant a whole piece on the ground - peel and all. Citrus can make the soil more acidic, however, so I do this with plants that only love acids such as radish, peppers and so on. — Judy Wilder Family Handyman 5 gallon buckets are convenient in the garden as well as collecting weeds. You can load with all the gardening tools and perform easily in places. When it starts to rain, protect the tool with a lid. But the best part is to double it into a portable chair when you need to rest or prune. The only problem is that the lid can be difficult to peel off. Block everything but two plastic tabs to fix it. The lid turns on and off with a snap. — Julie Abbott check out this 15 brilliant 5 gallon bucket hack for your home. Originally posted: April 17, 2019 Do it right, direct! Yourself!
