Jeremy lovejoy rate my professor

French mathematician Sylvie Corteel is a French mathematician at the National Centre for Scientific Research and the University of Paris Diderot, editor-in-chief of the Journal of Combinatorial Theory, Series A.[1] His research focuses on the enumerating combinations and algebraic combinations of permutations, paintings and partitions. Training and Career After graduating in 1996 from Compiègne University of Technology, Corteel worked with Carla Savage at North Carolina State University, where she earned a master's degree in 1997. She obtained her doctorate in 2000 at the University of Paris-South under the direction of Dominique Gouyou-Beauchamps,[2][3] and obtained an authorization in 2010 at the University of Paris Diderot. She worked as a member of parliament for conferences, then as a research fellow at the CNRS at the University of Versailles Saint-Quentin-en-Yvelines from 2000 to 2005, also doing postdoctoral studies at the University of Quebec in Montreal in 2001. From 2005 to 2009, she was associated with the University of Paris-South and in 2009 she moved to Paris Diderot, where in 2010 she became research director. Since 2017, she has been a visiting professor at the University of California, Berkeley. Together with his colleagues O. Mandelshtam and L. Williams, Corteel developed a new characterization of symmetrical and non-symmetrical Macdonald polynomials in 2018 using the combination exclusion process.
