Avoid overpaying with the following pricing services: • Car Clearance Deals • CarsDirect • MotorTrend With these services you can: • Force sellers to compete for your business. • Start your own online price war. • Many prices are not advertised online. • It's free and unbound. Visit Car Handling Offers, CarsDirect & MotorTrend. Subaru and Mazda are known for producing quality vehicles that are offered at affordable prices. If anyone is looking for a lot on a compact car, the 2020 Subaru Impreza and 2020 Mazda3 would be two models to consider. These vehicles are modern, sporty and efficient, and have many high-tech features for drivers and their passengers to enjoy. The 2020 Subaru Impreza can come as a traditional sedan or five-door hatchback. The four available rails, with both style points, are base model, Premium, Sport, and Limited. There is a basic model on Mazda, and the other rails are referred to as packages. Select a package, the preferred package, and the premium package are options, with the level of sophistication being highest in the premium package. This overview will provide potential customers with a comprehensive comparison of the Subaru Impreza and Mazda3. Hopefully anyone in the market for a compact car will be able to get a good sense of which vehicle would be best for him. Powertrain in Subaru Impreza, there's an engine that provides drivers with 152 horsepower and 145 pounds-feet of torque. This should be sufficient for most drivers, especially those on the market for a smaller vehicle. Transmission varies depending on the trim. The basic model has a five-speed manual transmission as standard. However, acknowledging that not everyone who may be looking at the most affordable Impreza may not want to drive a stick shift, Subaru has given customers the opportunity to get Lineartronic's seamlessly variable transmission. Lineartronic (CVT) is supplied on all other linings as standard, and the Sport five-door gearbox can be equipped with either a CVT or a manual transmission. On each Imprez there is a symmetrical subaru all-wheel drive system. The way the engine is positioned, along with the ability to send power to all four wheels, gives the car a very balanced feel. All-wheel drive can improve performance, not only when it snows or ices out, but potentially in all types of conditions. This feature improved acceleration, stability and control. Sports and limited rails have an additional component that can add to the performance factor. The Subaru Intelligent Drive, known as SI-Drive, gives people the ability to choose from different drive modes. Someone can choose an intelligent mode where efficiency is preferred, while Sport mode is ideal for those times when the driver wants to have a faster response when accelerating and shifting. Just as the Impreza is limited to one engine choice, so is the Mazda3. It runs on a SKYACTIV-G DOHC engine that is larger than the one in impreza. With a displacement of 2.5 liters, it can generate 186 horsepower and 186 pound-feet of torque. This engine works with a six-speed electronically controlled sport automatic transmission. Although all-wheel drive is not available on the basic Mazda3 model, it is an option on select, preferred and premium packages. Mazda calls its i-ACTIV AWD system, and when extra traction is needed, the engine can send power to all four wheels. It's similar to a Subaru all-wheel drive. The reason why the force is not constantly sent to all four rounds is that it reduces efficiency; is reserved for those times when extra traction is needed. This would be how excellent cars get if people are concerned about their gas consumption. Impreza can reach up to 36 miles per gallon (mpg) on the highway and 28 mpg in the city. (Sedan Sport, because of its slightly different design, falls just shy of these numbers.) Mazda's fuel economy with front-wheel drive3, at 36 mpg on the highway and 27 mpg in the city, is almost identical to the Impreza. With all-wheel drive, the numbers drop to 33 mpg and 25 mpg respectively. It's always nice to hear about guarantees when buying new cars, because the warranty can give people a lot of reassurance. For both models, the limited powertrain warranty is suitable for up to five years or 60,000 miles, depending on which milestone is reached first. Mazda and Subaru had to think with these cars about how to incorporate advanced components and sought-after equipment, all while keeping the total cost to a minimum. Most would agree that they did quite well. Driving in both models is comfortable. In the Subaru, this nice ride is partly the result of four-wheeled independent suspension. There are MacPherson struts with a stabilizer at the front and a double-alcohol suspension system at the back. The Sport has a special, sporty suspension that can handle bumps a little better. The sport also has active torque vectoring, which strategically uses brakes to improve controllability during rotation. Independent MacPherson struts are found in mazda3 as well. Its rear suspension uses a torsion beam axle. Like Impreza, the Mazda3 has several mechanisms in place to help maintain control. G-Vectoring Control Plus makes small adjustments to engine torque and braking pressure to ensure that the car remains properly balanced when changing direction. Due to their compact size, impreza and Mazda3 are ideal for urban environments or for any place where space could be tight. The Mazda3 has a wheelbase of 107.3 inches and a total length of 183.5 inches. The Impreza sedans are almost identical in size, with a wheelbase of 105.1 inches and a length of 182.7 inches. 5-door Imprezas measures 176.2 inches from head to tail. Both the Impreza and the Mazda3 are about five inches above the ground. Most people these days are looking for vehicles that are practical except that they are easy to drive. Anyone looking for cargo space will surely be fascinated by the five-door Impreza. It has 20.8 cubic feet of storage behind the rear seats, and when these seats are folded down, the maximum cargo capacity is 55.3 cubic feet. That's close to what you could get with a smaller SUV. With the Impreza sedan, the trunk has a volume of 12.3 cubic feet. This is not as big as what mazda3 has to offer, which is a trunk volume of 13.2 cubic feet. These strains should provide enough space for most situations, and some people just don't need more space than that. If someone is planning on transporting adults in the back seat, it might be a good idea to look at the second row of foot space. In these two models there is only enough space for taller people to fit in the back, although things are far from spacious. The Impreza has 36.5 inches of legroom at the back, and it is on par with the rear seat-foot space in the Mazda3, which is 35.1 inches. The technology is used to advantage the driver in these cars. Vyšší výbava Subaru Impreza keyless access, pin-code access and start with a button that can be very convenient. The Impreza has a USB port in the front seat, and the higher rails can have up to two USB ports at the front and two at the back, giving everyone a way to keep their devices charged. Automatic temperature control is included in the limited. The 6.5-inch STARLINK touchscreen is the standard on impreza and includes Apple CarPlay, Android Auto, Bluetooth and Pandora radio. Mid-level trims, gets upgraded with cloud-based apps, CD player, and SiriusXM All Access Radio and Travel Link. Touch screens on higher models measure eight inches and include HD Radio and 4G LTE Wi-Fi in addition to all of the above components. If anyone wants the best of what Subaru has to offer, Limited comes with the ability to get integrated navigation. Mazda3 also has a comprehensive infotainment system and other technological components. It can be equipped with an automatic climatic system with two zones, as well as a keyless input with a button start. While its entry-level model doesn't have a smartphone connection, it has an 8.8-inch center screen, HD Radio, Pandora radio, and Bluetooth. Apple CarPlay and Android Auto are included in the Select Package level and have SiriusXM satellite radio and a premium Bose audio system with 12 speakers. Purchase tip: To avoid overpaying a new car, first buy prices online. Get forward prices before you go to the dealership. We recommend the following free services; Car handling offers, CarsDirect & MotorTrend. These free services will offer you the lowest prices and give you more competitive bidding. You will know the best price before you visit the seller. Safety Many components have been integrated into these cars to keep passengers safe. Some components, such as airbags and three-point seat belts, will do their job if anyone ever gets involved in an accident. More advanced mechanisms have been developed to reduce the chances of getting any type of unfortunate situation. These mechanisms are considered active rather than passive. The Subaru has given all Impreza drivers an advantage by having a rear-vision camera and brake assist. The brake assist ensures that the maximum pressure is applied to the brakes whenever the vehicle appears to be involved in an emergency situation. Available on the base model and standard for all other rails is EyeSight Driver Assist technology. This includes lane departure warnings and horns, lane keeping assist, adaptive cruise control that can automatically adjust speed to maintain the correct distance with other vehicles, and collision braking. This latest system can sense when a head-on collision is imminent and can put pressure on the brakes to try to prevent before it happens. On the higher equipment of the impreza there are more assistance systems for drivers. High-beam assist may be suitable because it automatically turns on with high beams when the road is particularly dark; blind spot detection comes with lane change assist and rear cross traffic warning to give people a better idea of what's around them; and reverse automatic braking can reduce the likelihood of reversing into an object when it can be difficult to see behind the Impreza. The Mazda3 has a very similar setting in terms of safety. It has a large number of airbags, special headrests to reduce whiplash, brake assist and anti-lock brakes. It also has some of the same driver assistance technologies as the Impreza. The difference is that these systems are incorporated into Mazda3, starting with the basic model. On Mazda3, they are standard: lane departure warning, lane keeping assist, advanced cruise control, automatic high beams and driver attention alerts. In addition, the Mazda3 has smart brake support, which works in a similar way to pre-wosted braking. At higher levels, drivers can take advantage of blind spot monitoring, rear transverse traffic alerts and adaptive front lighting. Which is the best value? Looking at the prices, the Mazda3 is a bit easier as it has four trims. The vehicle starts at \$21,500, while the select package is priced at \$22,700. Many people eventually opted for the Select package because of its more comprehensive security and technology packages. A small jump of up to \$24,200 accompanies an upgrade to a preferred package that gives people an eight-way driver's seat, driver's seat memory function and heated front seats. If a customer wants luxury features like leather seats and a power moonroof, the premium package would be the one to get it, and that's priced at \$26,500. There are four Impreza rails, but there are technically eight models, because each can be configured as a sedan or 5-door. Other than the Sport, the Impreza is about \$500 more expensive if a 5-door style is selected. The basic Impreza model is under \$19,000, which means it can attract a customer on a limited budget. Premium equipment, which comes with driver assistance systems, is valued at around \$22,000. The sport jumps up to around \$23,000, and it appeals to some types of customers who like its edgy aesthetic. Finally, Limited is priced at about \$26,000, and at that price, customers will be treated to a leather-wrapped steering wheel, leather seat, and driver's seat driver. Which is better? When deciding between a Subaru Impreza and a Mazda3, these are mostly personal preferences. From a price point of view, they fall within the same range. However, the basic Impreza model is cheaper than the basic Mazda3. Since it starts below the \$20,000 mark, could pop up on many people's radars. Of course, customers look at more than just prices when buying new cars. The Mazda3 packs a little more punch, but what impreza has to work for it is that it comes standard with symmetrical all-wheel drive. This is an option on most Mazda3 equipment, but at an additional cost. There are several other important factors to think about. The Mazda3 can have a safe advantage, and the Impreza can be a winner in the technology department. The five-door Impreza shines for cabin space, but the sedans also have comfortable interiors. Mazda3 can appeal to people with finer tastes because it is elegant, elegant and powerful. Impreza can be more practical, especially if a five-door package is selected and its driver information and entertainment system will appeal to many customers. Customers.
