A fast and easy option is to use the Driver Update Utility for Maxtor to scan your system for free. The utility tells you which specific drivers are out-of-date for all your devices. Step 1 - Download your driver to get the latest drivers including Windows 10 drivers, you can choose from the list of the most popular Maxtor downloads. Click the Download button next to the matching model name. After completing your download, go to step 2. If your driver is not listed and you know the model name or number of your Maxtor device, you can use it to find our driver collection for your Maxtor device model. Just type the model name and/or number in the search box and click the search button. You may see different versions in the results. Choose the best match for your PC and operating system. If you don't know the name or number of the model, you can start narrowing your search by choosing which category of maxtor devices (such as printers, scanners, videos, networks, etc.). Start by selecting the right category from our list of Maxtor device drivers by category. Need more help finding the right driver? You can request a driver and we will find it for you. We employ a team from around the world. They add hundreds of new drivers to our site every day. Tech Tip: If you're having trouble deciding which one is the right driver, try the Driver Update Utility for Maxtor. This is a software utility that will find the right driver for you - automatically. Maxtor updates its drivers regularly. To get the latest Windows 10 driver, you may need to visit the Maxtor website to find the driver for your specific Windows version and device model. Step 2 - Install your driver after downloading your new driver, then you need to install it. To install a driver in Windows, you need to use a built-in utility called Device Manager. It allows you to see all the devices recognized by your system and the drivers associated with them. How to open Device Manager in Windows 10 and Windows 8.1, right-click on the Start menu and select Device Manager in Windows 8, swipe from anywhere down on the desktop, or right click and swipe all apps -> or scroll right and select the control panel (under Windows System section) -> Hardware and In Device Manager Windows 7, Click Start-> Control Panel -> Hardware and Sound -> Device Manager in Windows Vista, Start-> Control Panel-> System Maintenance in Windows XP - > Device Manager, Start-> Control Panel - > Performance and Maintenance - > System - > Hardware tab - > How to install device manager how to install drivers using Device Manager Find device and model, in which the issue is taking place and double click on it to open the Properties dialog box. Select the Driver tab. Click on the Update Driver button and follow the instructions. In most cases, you have to reboot your computer to make the driver update take effect. Tech Tip: Driver downloads and updates come in different file formats with different file extensions. For example, you might have downloaded an EXE, INF, ZIP, or SYS file. Each file type has a slightly different installation process to follow. If you're having trouble installing your driver, you should use the Driver Update Utility for Maxtor. It is a software utility that automatically finds, downloads and installs the right driver for your system. You can also back up your drivers before making any changes, and return if there was a problem. Try it now to securely update all your drivers in a few clicks. Once you download and run the utility, it will scan for out-of-date or missing drivers: When the scan is complete, the Driver Update utility will display a results page showing which drivers are missing or out-of-date. You can update individual drivers, or all required drivers, with one click. For more help, visit our driver support page for step-by-step videos on how to install drivers for each file type. Type.
