**Case 1840 skid steer service manual pdf**

690 bar (10,000 psi) pressure gauge to the test port. 2. If the hydraulic oil is not operating, start the engine with a full throttle and hold the bucket control lever in the rollback position for 30 seconds. Then return the bucket control lever to neutral for 15 seconds. Repeat this cycle until the oil temperature is at least 52Q C (125Q F). 3. Start the engine at low idling speed. Lift the seat bar and slowly move the directional control levers forward until the parking latch pins start each drive-wheel. 4. Continue to drive the engine with a full throttle. Watch the control lever for the test circuit, which is half the full walk distance, and watch the pressure gauge. When the pressure stops increasing, read the pressure gauge and move the control lever to Neutral. 5. The correct pressure is 280 to 300 bar (4060 to 4350 psi). If the pressure is not correct, use a new chain disconnect valve. You can temporarily repair the forward circuit by exchanging a functioning reversing circuit switch valve with a forward circuit switch valve. Image not availableColor: Item location: Englewood, Colorado, United States Shipping to: United States Excludes: Angola, Cameroon, Cayman Islands, French Polynesia, Libya, Mongolia, Suriam, Guyana, Panama, Mauritius, Brunei Darussalam, Chad, Madagascar, New Caledonia, Bahamas, Bermuda, Iran, Saint Kitts-Nevis, Western Sahara, Bolivia, Laos, Republic of congo, Seychelles, Sudan, Guadeloupe, Venezuela, Somalia, Burma, Cuba, Reunion, Yemen, Barbados, Belize, Liberia, Sierra Leone, Central African Republic, Martinique, Dominica , Niger, French Guiana, Saint Pierre and Miquelon Change Country: -Select- United States 2 items available.
