WB Shield: TM © WBEI. (s20) June 22, 2020 Version 1.3.1 LEGO® MOVIE 2™ Movie Maker, make sure you are a parent and manage your child's consent with LEGO Movie 2™ Movie Maker Using a secure method is even more secure with our updated account verification®.verified account unlocks the full LEGO®MOVIE 2™ movie maker experience, but without confirmation, your child can still browse and enjoy the app.Perform a one-time credit card check to make sure that the person who confirmed it is an adult. Verification is free and does not enable in-app purchases or card storage. I really liked the original better. It was really user-friendly and my art students were really able to do a lot of things. For example, the original app had previous ghost photos, so you knew how much to move your numbers. It didn't make so much sense! Open the app and go straight to working mode. Can I even go back later to save an unfinished movie and work on it? Now I feel like I have to use another app to teach stop motion to my student bc of ghost frames with limited movie length. Take it home! If I use the app now, I think there will be too many frustrated kids. I'll probably have to use Stop Motion Studio. Wow, it's great to hear that you're using our app to teach students about stop motion 😊 don't worry about ghost frames, we didn't let that feature disappear like Ghost, they're actually available in the latest update of the app. We've also tried to keep our app simple, so no matter how small a director can jump in and start making small masterpieces, having a menu would definitely be great to be able to make useful and long blockbusters. We hope our fans have a great experience with our app, so we're sorry to hear that the app crashed on you, which should be frustrating. You should usually try reinstalling the app to fix such a problem. We really value the feedback of our fans. That's why I told all of your suggestions to the developers. Gabriella, LEGO Customer Service - Dear Lego, I finished to see what new features were added when the app update was completed - thank you for taking the time to give us your feedback. I was glad to open the app and see that you can add video to the stop motion. I made a movie and joined the editor. I was a little disappointed to see that a lot of music was gone. My favorite track was still in it, so I was fine with this. Then I went into effect and was surprised to see the new features. I moved and was sad that there were no more filters or stickers. Then I finished and submitted my work. About an hour later, my movie was almost over. Then the app crashed and all my efforts were wasted. I was disappointed with the new quality and what was once a great app was ruined by the new update. - Lego film producer. Hello! It's great that you've get the latest updates.Thank you very much for your quick feedback on the new version. We take all your feedback very seriously and are always looking to improve the app if necessary. We are very sorry that all effort was lost due to the crash. We are investigating the crash issue and will fix it as soon as possible. Once again, thank you for your honest and constructive feedback. Continue to enjoy the LEGO® Movie 2 Movie Maker app!- Samuel, LEGO® Customer Service - My daughter loves to play with this app, but it's impossible to actually save the video. I spent a week tapping one video at a time to go through moderation so that I can now save it to my hard drive. It should only take a few minutes for it to be approved. Each time, the Wait for Approval animation rotates for more than an hour. For about a third of the time, the video is actually approved and nothing happens for the rest of the time. When I tried for the first time, I spent the whole night waiting for each video to pass through the severity. I wasn't going to save them until they all went through the severity. I checked in in the morning and all of them had lost their approval and had to go through the severity again! The process of trying to save a video is too time consuming and frustrating. This is not the experience we want LEGO fans to have! This may take some time, but if this happens frequently, you may experience a bit of a bug. If you don't mind losing content stored in your app, uninstall and reinstall the app. This will fix all bugs. 😊 would like LEGO fans to love the app, thank you for your feedback!- Luigi, LEGO Customer Service Developer Website App Support Privacy Policy It gives students the tools to start animation instantly and is involved. Students will probably need to check out the video on Lego's YouTube page. A lever not linked from within the app, these videos provide detailed and explicit steps on how to get the most out of your app's features. In fact, the steps section is pretty bare bones and the app is easy to use, but students may not level up their understanding without more detailed tutorials. In addition, some features appear shorter: the range of frames per second (FPS) must exceed 10 FPS, and sound effects options are displayed along the main navigation bar with other features such as music, effects, and speed. But at best, LEGO Movie Maker may introduce students to a suite of tools used by professional stop-motion animators and inspire them to think creatively about how they communicate with the right context and guidance.Presenting information in this unique medium. Help your child's LEGO characters live up with the LEGO Movie Maker app. This fun, child-friendly app brings the whole family together to create custom LEGO Stop Motion movies on any topic. Whether you're a child, teen, or just young in mind, anyone can use this innovative and pretty powerful app to create movies using Hollywood-style stop-motion animation technology. First, create a movie set using regular LEGO building blocks or Lego playsets. Then collect a handful of your favorite Lego mini-figures into animations so that they can star in movies. The app works with any toy or action figure. Then, from within the LEGO Movie Marker app, you can edit individual frames, add music, capture special effects, add main titles, and place these elements together to create digital high-resolution movies. Lego has also set up a movie gallery where app users

can share their movies with others and watch uploaded and shared movies. Using the LEGO Movie Maker app, anyone can bring their Lego toys and imagination to life in a very creative way. The app itself teaches the basics of stop motion animation and is easy to use. Tested on the iPad kids enjoy the freedom to shoot on their own and shoot what they like - observe the nursery experts Now I need to move him there to take the next shot - he's going to talk to this - I'm making my own movie! - I'm making my own movie! - A great app for kids where a 7-year-old boy will increase his imagination and increase his imagination. Kids will create their own LEGO movies using the camera on the iPad. It is easy to use with clear instructions. This app is great for enhancing creativity and allowing kids to runaway their imaginations. We like that this app can be used as a way of writing. Kids can build their own videos and write their stories (or vice versa) - an excellent resource for hesitant and reluctant writers. We love the addition of mini clips to give kids an idea, it's very good for those who have a hard time getting started and need a little help. We feel this is even better if kids have a microphone feature that allows them to add speech to their videos. Video.
