The MC3190 is a workhorse, recommended for several years by Balloon 1 for use in ambient storage environments. With a variety of communication, scanning and keyboard options, there's probably a perfect MC3190 for your operation. A key feature of the MC3190 is connecting to wireless networks, and this video is intended to be a how-to for any user to configure the headset to connect to a wireless hot spot. This video includes connecting to a normal visible network, and a separate video includes connecting to hidden networks. This video also applies to the veteran MC3090, which otherwise had a black and white display - the menu options are very similar if not identical. .
