Many fights have been lost because of poor execution of order and control activities. One major reason for the success of Temporary Dessert Operation was the way each unit maintains and supports a command and control structure. A comprehensive knowledge of higher and lower scale in the area of assigned operations to a seabe bation is critical to implementing command personnel and control functions. This chapter provides detailed information about combat operations centers (COC). Also, described in this chapter is marine Air-Ground Task (MAGTF). NOTE: During combat operations, Seabee units are normally assigned to a MAGTF. ORGANISATION OF THE MARINE AIR-GROUND TASK FORCE (MAGTF) A Marine Air-Ground Task Force (MAGTF) is normally formed for combat operations in which substantial marine and marine aviation are involved. Trends in national strategy show that the most probable work of MAGTFs will be in the execution of force-in-preparation missions. The fulfillment of these missions requires the staff of MAGTFs as landing forces to encryption operations and later enhance operations. MAGTFs must have the ability of these commitments to operate in tight coordination with other Armed Forces and Allied nation forces. MAGTFs are characterized by operational concepts, organizational structures, equipment, and systems purchased for hr in Marine, Joint, or Combined Operations. The fact that a Seabe battery is attached to a MAGTF during combat makes it critical that you understand the MAGTF organization. Regardless of how large, a MAGTF consists of at least four elements and the map elements (Figure 1-2) are as follows: . Component Commandments (CE) . Combat Ground Components (GCE) . Combat Aviation Elements (ACE) . Component Support Service Combat (CSE) Figure 1-1.- Primary MAGTF Engineer Advantage. Figure 1-2.- Component of a MAGTF organization. THE COMMAND ELEMENT (CE) Command element (CE) is the MAGTF headquarters and is established for effective planning and execution. It extends and completes the capabilities of MAGTF subordinate components but does not copy them under normal circumstances. direct bonding among the four components is desirable to achieve the necessary coordination to require the effective conduct of air-ground operations. A CEC officer attached to the Command Element, staff engineer. The CEC officer serves as an adviser to the MAGTF engineer officer on matters related to the capabilities and staff of the Naval Construction Force. A large portion of the MAGTF Command Element is and matters involving higher, adjacent, and supportive commands. Component Ground Combat (GCE) Combat Element (GROUND) is a work organization prepared for the conduct of ground maneuver operations. The GCE is constructed around a combat infantry unit, and it also includes appropriate combat support and combat service support (CSS) units. Normally, there is only one GCE in the MAGTF. A requirement for more than one GCE can occur in certain operational situations, such as joint or combined operations. AVIATION COMBAT ELEMENT (ACE) normally, there is only one Combat Aviation Component (ACE) in a MAGTF. This element is task-organized for the conduct of operation when tactical. It includes the aviation commands (including air control agencies), combat support agencies, and combat service support units required for the mission. Aviation resources vary from a marine wing (MAW) and appropriate force units to provide these capabilities. At the Navy's Expedition Forces (MEF) and Marine Expedition Forces-Forward (MEF-F) levels, the ACE includes both fixed-wing assets and helicopters well as an air defense capability. Air operations are performed under the principle of centralized control at the MAGTF level. When the MAGTF commander conceded responsibility for control of air operations, he or she exercises control of the installations provided by the ACE. He normally appoints the ACE commander to act as commander when MAGTF Tactics (TAC). COMPONENT SUPPORT SERVICE COMBAT (CSE) Component Component Support Combat Services (CSSE) provides the combat service support (CSS) of MAGTF which is beyond organic capabilities of the subordinate components. Starting from the assigned mission, it is organized work provides all the following functions: equipment for, maintenance, engineer, medical/dental, automatic data processing, material-handling equipment, personnel services, food service, transportation, military police, unleash, and financial management. Management.
