Dsc trouble code 8

Is the yellow 'trouble' LED lit on your alarm keyboard? DSC uses LED codes to indicate problem details for all keyboards that do not have an LCD reading screen. The following applies to all PowerSeries panels, which include PC1616, PC1832, PC5010, PC5015 and others. To view system problems, press: service required (press [1] for more information) low battery (main battery in the panel) system circuit system trouble system rig control system RF jam detection PC5204 low PC5204 AC failure AC ac current ac failure is not present in the panel (the system runs on backup battery power. The phone line problem does not detect an active phone line board. Tampering area (press [6] for more information) The system has detected manipulation of one or more sensors on the system. Press [6] to show the keyboard the area that was tampered with. Full (AC and battery), the time and date need to be reprogrammed. Programming time, press [*] [6] [main code] [HH:MM] [MM:DD:YY] need more details? Click here to download the full user guide (pdf) for PC1616 / PC1832 / PC1864. There is an active problem in your system. Your system will generate a trouble code that can be used to unscrew the actual problem of the condition. Click on '*' followed by '2'. This will create a small number in the view window. This number corresponds to the state of disturbances on the system. Here is a summary of each code and how to resolve: 1) Light number (1) refers to the required service requirement. If this number appears - press (1) again and you will receive another number indicating a problem exactly. Here's a list of those trouble icons: a low plate battery. The backup battery in the painting box is low and potentially needs to be replaced. If you have a recent power outage, allow 12-24 hours for the battery to recharge. If not, it's time to replace the battery. Alternative batteries can usually be purchased from retail outlets such as Radio Shack & Batteries plus. Alternatively, you can contact CPI Customer Service at 800-948-7133 for information about the cost of replacing the CPI panel battery. Bill/Century Trouble. This condition will require service – it indicates a problem with the siren/sounder connected to your alarm system. Call us at 800-948-7133 to make an appointment. Public order This case requires service. Call us at 800-948-7133 to make an appointment. Public order is in vain. This case requires service. Call us at 800-948-7133 to make an appointment. General supervision of the system. This case requires service. Call us at 800-948-7133 to make an appointment. 5205 low battery power supply unit. This case requires service. Call us at 800-948-7133 to make an appointment. 5204 AC power unit failed. This case requires service. Call us at 800-948-7133 to make an appointment. 2) AC failure. This indicates that the alarm panel does not receive electrical power. If there is a power outage in the house, the backup battery will keep the alarm plate operational and the condition must be restored as soon as the power is on. If you have power at home, check that the adapter is securely connected and that the socket you are connected to is receiving power. If all these checks are in them, contact our customer service department at 800-948-7133 to schedule the service. 3) Phone line trouble. This indicates that the alarm panel is unable to detect the phone line connection. Please make sure that your phone system is turned on. If not, contact the phone holder to resolve the issue. If it works, contact our customer service department at 800-948-7133 to test your system and schedule the service if necessary. 4) Lack of communication. This indicates that the alarm panel was unable to send an event to our central station. This is very similar to the previous trouble case. Make sure your phone system is ready to work. If not, contact the phone holder to resolve the issue. If it is operational contact our customer service department at 800-948-7133 to test your system and service schedule if necessary. 5) Error area. Press the '5' key and you will receive the corresponding number for the affected area. The area referred to contains an error that prevents it from working properly. Please contact our customer service department at 800-948-7133 to schedule the service to check the device in question. 6) Tampering area. Press the '6' key and you will receive the corresponding number for the affected area. The area referred to detects a state of absurdity. This usually indicates that the device is not assembled properly and usually occurs after the battery is replaced at the contact. Please remove the cover and try to redraw it correctly. If tampering fails to remove clarity, contact our customer service department at 800-948-7133 for further diagnosis. 7) Low battery area. Press the '7' key and you will receive the corresponding number for the affected area. The area referred to read the battery case is low and you need an alternative battery. Replace the battery in the contact and condition Clear. If the battery change does not resolve this, please contact customer service at 800-948-7133 for further troubleshooting. 8) Reset the time and date. This indicates that your alarm panel has lost its time and date and needs to be reprogrammed. This usually happens if the system is powered all the way down. To set the time and date: Press the * key followed by the '6' key. Enter the 4-digit main code. Enter the time and date together as described (Note: Time must be entered at military time) - <military time=><mddy>. For example it is 6:49pm on 10/5/2015. This was entered as: 1849 100515. 1849 corresponds to the entry of military time from 6:49pm and the date is entered with the year as two digits. Then press the '#' key to set it. It may take several minutes for the time to be updated to reflect on the offer. Is the yellow 'trouble' LED lit on your alarm keyboard?
