Classroom norms examples

Google Classroom is a free web app that teachers can use to manage all the documents they typically share with and collect from students in the classroom. Developed by Google and provided for free, it uses G Suite for Education (or any Google account) to let teachers share and post documents, and students can also use their own Google Accounts to upload their own files. You can think of Google Classroom as a centralized dashboard to simplify all teacher/student communication. Google Classroom is a front end or dashboard that teachers can use to manage the classroom and all the included documents. Although Google previously required you to have a G Suite for Education account to get started with Google Classroom, that's no longer the case, which means parents and homeschoolers can more easily take advantage of Google Classroom now. If you haven't done Google Classroom before, you can get started by going to classroom.google.com and following the instructions to set up an account. After you create a classroom, the Google Classroom home page displays a class code. Share this with students so they can join the classroom and access the documents and information you share there. Google Classroom makes it easy to share a wide variety of documents with students and keep them engaged with the teacher, whether it's in the classroom or remotely with students who can access from home. Here are the key features: Publish announcements. As a teacher, you can post messages and announcements on the Google Classroom cover page. This is free form and unstructured, so these can be simple greetings, motivational statements, task reminders, assessment posts, or anything else you need to communicate. Create tasks. Google Classroom is a comprehensive tool for creating class assignments. You can use Google Docs to upload files students must complete their assignment, enter the rubric and deadline, and other information you need to request. Students receive notifications about their assignments and can post the completed assignment to Google Classroom when they're done. Conduct tests and quizzes. Teachers can create quizzes and post them. Google provides a lot of flexibility; quizzes can be any length and complexity, with options for multiple choice and short answer, for example. Act as a document library/repository. Google Classroom acts as a friendly front-end to Google Drive, so you can make documents available to your students in this way. Google Classroom has a number of compelling features that make it a smart alternative to a more traditional paper-based curriculum. It's available wherever students and teachers are. With students increasingly learning remotely from home, teachers can stay actively engaged with students wherever is. There are mobile versions of Google Classroom for both iOS and in addition to the website. It can test for originality. With plagiarism as a constant concern in the classroom, Google Classroom has the ability to report on student work and indicate whether it appears to reuse the wording from another source. It offers centralized grading. Google Classroom can manage students' grades and make this information available to both teacher and student. After student assignments are turned in, teachers can return assignments to students for extra work and selectively allow students to revise assignments and turn them back in. External students can use Meet for face-to-face education. Each classroom can have its own unique Google Meet code, which allows teachers to set up video sessions with students in Google Classroom. Skip to content You probably already know the basics of pondering your child for school success: Read with her regularly, get to know their teachers, and try to be involved in school activities. But there are many other important lessons that parents can learn from those who spend every day at school: teachers. We rounded up top teachers from all over the country - many parents themselves - to share wisdom drawn from their years in the classroom. Here are teachers' best insider tips: Essays and open questions often account for a large part of the grade on school tests, and doing well on them can mean the difference between a so-so score and a big one. But what do teachers really look for when considering these questions? Details and more details, said Lynn Livingston, a fourth-grade special education teacher at Old Farmers Road School in Long Valley, New Jersey. Her insider test-taking tips: When answering essays or open questions, students should pretend to teach the teacher about the subject by explaining the concept and giving examples to back it up. Many children assume that a detailed explanation is unnecessary because, as they say, the teacher already knows this, Livingston points out. But the truth is that in order to get a good grade, students must go into detail. It's the only way they can show the teacher that they really know the material. Help your child prepare to score well on essay questions by getting her to give you mini-lessons on concepts that are likely to be covered on the test. Maybe you think a teacher's assignments are stupid or the school's exam policy is too demanding, and you can have a point. Nevertheless, resist the urge to voice these criticisms to your child, and make sure he is out of your ears if you share your concerns with your spouse or another parent. If a child thinks his parents have critical views of school, it gives him permission not to do his best, says Betsy Wiens, a seventh- and eighth-grade teacher at Washburn Rural Middle School in Topeka, Kansas. A better tactic to air your concerns, she says, is to talk to your child's teacher directly. If you are not able to resolve the situation by meeting the teacher, then talk to the principal. While it may be tempting to keep your family's personal affairs strictly private, it's important to let your child's teacher know about important events like childbirth, divorce, remarriage, or a death, because a change at home can lead to social, academic and behavioral changes at school, said Jeanine Ryan, a kindergarten teacher at Tradewinds Elementary School in Coconut Creek, Florida. For example, the arrival of a new sibling or stepfather can cause a child to act out to get attention. Knowing what's behind this helps the teacher respond more appropriately. And this applies to children of all ages. Talking to the teacher is as important in middle school as it is in preschool, Ryan adds. Children need visits to libraries, museums, zoos, gardens and even restaurants, says Betsy Rogers, a first- and second-grade teacher at Leeds Elementary School in Leeds, Alabama. These learning experiences increase a young stunner's knowledge of our world, offer early exposure to art, inspire creativity and strengthen language development in conversations. The more children know about the world around them, the better prepared they are for school, Rogers explains. So plan day trips to places like science centers and aquariums that offer interactive programs for children. Is your son or daughter crazy for something furry or feathered? Pencil in a trip to a zoo or work farm. Junior star-gazers will find a planetarium ride out of this world. To make the most of your outing, always end your visit by discussing with your child the many things she saw. You can even have young children draw a picture or write a story about what they've learned, Rogers suggests. Older children can make a special scrapbook dedicated to the excursion. High standards are good, but sometimes even the most well-meaning parents can fall into the trap of putting excess emphasis on good grades. Pushing too hard for the kid to excel may not be the best strategy. In fact, focusing heavily on grades can have the opposite effect. If parents put too much emphasis on getting A's, then the child is not going to perform that well, said Jane Webster, a third-grade teacher at Booker T. Washington Elementary School in Clarksdale, Mississippi. The Rx? Relax and lean on your child's teacher for help. If a parent explains that things are stressful at home because the child doesn't live up to expectations, the teacher can suggest low-pressure ways to help the child learn what he's missing, Webster says. For example, a teacher can pair a child with a classmate or introduce a game to reinforce a concept. These things can make learning fun and help students relax. © Copyright . Getty Images AsiaPac/Getty Images News/Getty Images Cultural norms include trivial daily activities, such as answering the phone with hello, using a medium-pitched tone of voice during conversations, wearing appropriate clothing and driving or walking on the right side of the road and sidewalk. Cultural norms are defined as standard or acceptable behavior and attitudes espoused by a group of people, such as citizens of a country, a click in school or a tribe. Cultural norms affect almost every part of everyday life, and often become so routine that participants are unaware of their specific behaviors and actions. Although people often largely do not realize that they practice cultural norms, these actions still play a significant role in determining how people dress, act and interact with others. Cultural norms exist in all societies, but vary widely between different groups and populations. In high school, many students identify with certain groups of peers. These groups have their own standards of behavior, including the style of dress and attitudes, that group members must adopt to fit in. Some groups adopt and encourage positive behavior, but cultural norms may include engaging in deviant activities such as smoking tobacco and using alcohol. Cultural norms are sometimes passed through peers, but also exist in families and religious sects. Sects.
