# Bmi calculator android studio

Hello, I create that thread to present you a tutorial aiming to learn you how to create a Body Mass Index Calculator for Android. This tutorial is ideal for beginners that want to discover how to create a first application. You can discover the tutorial in video on Youtube : Create a Body Mass Index Calculator for Android The Body Mass Index (BMI) or Quetelet index is a value derived from the mass weight and height of an individual. The BMI is defined as the body mass divided by the square of the body height, and is universally expressed in units of kg/m². By analyzing the BMI value, we can determine a diagnostic. First step for the application is to define a layout letting users to enter weight and height values to calculate the BMI index. Besides, we will need a button to launch the BMI calculation and also a TextView to display the result. The layout will have the following form : Code: Now, we can write the Java code in our MainActivity : Code: package com.ssaurel.bmiccalculator; import android.os.Bundle; import android.support.v7.app.AppCompatActivity; import android.view.View; import android.widget.EditText; import android.widget.TextView; public class MainActivity extends AppCompatActivity { private EditText height; private EditText weight; private TextView result; @Override protected void onCreate(Bundle savedInstanceState) { super.onCreate(savedInstanceState); setContentView(R.layout.activity\_main); height = (EditText) findViewById(R.id.height); weight = (EditText) findViewById(R.id.weight); result = (TextView) findViewById(R.id.result); } public void calculateBMI(View v) { String heightStr = height.getText().toString(); String weightStr = weight.getText().toString(); if (heightStr != null && !"".equals(heightStr) && weightStr != null && !"".equals(weightStr)) { float heightValue = Float.parseFloat(heightStr) / 100; float weightValue = Float.parseFloat(weightStr); float bmi = weightValue / (heightValue \* heightValue); displayBMI(bmi); } } private void displayBMI(float bmi) { String bmiLabel = ""; if (Float.compare(bmi, 15f) 0 && Float.compare(bmi, 16f) 0 && Float.compare(bmi, 18.5f) 0 && Float.compare(bmi, 25f) 0 && Float.compare(bmi, 30f) 0 && Float.compare(bmi, 35f) 0 && Float.compare(bmi, 40f)
