If you encounter problems with the installation, updates, website or if you are unsure if the detected error is an actual error or a feature, please go over to our support subforum and let's see if we can fix it there. Do not hesitate to open new threads if you are unsure if it is related to similar reports. The amount of support we can provide is quite limited, you can read more over here. Questions, history discussions and other similar topics can be found in the other Enderal-related sub forums. Let's go back to the subject: the tracker. To create a ticket you need to create an account, this prevents robots from spamme tracker. You will receive email notifications when your ticket was updated or resolved. The tracking isn't linked to our forums or wiki, so you'll need to create a new account. Things you may want to consider before creating a ticket.: Do you have the latest update installed? Have you tried verifying your game files via Steam? Is the error reproducible (= can be made over and over again, more than once)? If so, how is it reproducible - take notes for the ticket. Saving a previous storage fix error? Is it an actual error or could it be a feature? If you are unsure, feel free to ask in the forum. Is it caused by mods? Skyrim mods are not necessarily compatible. Disable mods to determine if they are causing the problem. Is there already a similar ticket? Use the search function by clicking Show Problems on the left. Search for keywords your ticket may contain, such as mission names, NPC names, place names, spells, talents etc. - please note that there may be spoilers. There are some Skyrim-Engine bugs, which we can not solve, use Google to search for a solution. Create your ticket: You can create a ticket with and without having an account. Click Report Problem in the upper-right corner of the main page of the track. Now select a category. If you are unsure which category the error would fit in, just select some of the categories, we will eventually move it to the correct. But most categories should be self-explanatory. Fill out the given form and be sure to give us as much information as possible. It is often necessary to attach your bearings. Be sure to attach both the .ace and the .skse file, otherwise we can't help you. Be communicative. Often we need additional information, storage or descriptions of your error to analyze and fix it. Sometimes it is possible, that we can not solve the error right away - be patient. Do not get angry or rude - this is not of benefit to anyone. If you find the cause or an actual solution for an error, please let us know. Support Enderal was downloaded 1.4 million times (April 2017). The release of Enderal on Steam will bring in a lot of new people, which is amazing! We are very grateful for all the feedback. But many players result in many problems. As you may know, we do this project completely in our spare time in addition to our daily life (jobs, education, university etc.). Because of our limited time, we have only limited opportunities to support and solve problems. We have to rely heavily on you, society, to help each other. If you know how to fix a problem with another player, you can help! The team also tries to help and solve problems, but we mainly check the bug tracker. Troubleshooting There are some known issues and tips: Enderal saves are stored in ...documents\mygames\enderal\saves\). Do not load Enderal bearings into Skyrim or vice versa. They could be destroyed. Do not load saves created in the old non-Steam Enderal installation in the Steam version of Enderal. This will result in inevitable errors. No support will given in this case. If the game crashes during the first and shows an error Skyrim has crashed because an object reference with form ID: ..., you need to close the game and launcher and remove Enderal.ini and EnderalPrefs.ini in ...documents\my games\enderal\ and launch Enderal afterwards. Random crashes (while changing places etc.) can happen occasionally and we can't really do anything about it. We have optimized the worst areas and will continue to do so. So there is no need to report them. If the game crashes is reproducible under certain circumstances we will try our best to fix it. A ticket on the bug tracker would be useful. Thanks! If an ingame video originates, turn off (or on) OneTweak in Enderal Launcher. Usually this gets rid of the problem. You don't have to report it. Enderal uses the engine to its limits, FPS Drops can happen in certain regions. If you encounter a mission error (or something similar), don't try console commands on your own. [[#Bugtracker] Let's take a look at your rescue first], before accidentally destroying the rescue. General information about mod use We can not support mods for Enderal officially. Most Skyrim mods cause problems when loaded together with Enderal, because they are not aligned and optimized for it (Enderal uses its own modified masterfiles, scripts and assets). But Enderal has his own category on Nexusmods.com. Check it out, if you want to mod Enderal. Be careful: Some mods cannot be updated for the latest version of Enderal and cause errors. Uninstalling Uninstallation is simple: Right-click Enderal in your Steam Library and select the uninstall option from the context menu.
