Body by Design is a wonderfully special book. It teaches secondary anatomy and the ergy of the human body, but it does so from a creative and liberal artistic point of view. This includes a discussion of Haeckel's 19th-century summary theory, a theory that says that an embryo passes through abbreviated evolution stages like the 19th-century developmental stages of the ancestors (page 32). The author points out that this discredited theory continues to appear in popular texts and journals to support the theory of evolution. While the book includes illustrations and vocabulary typical of biological texts, it often tracks historical perspectives and develops an understanding of the topics (liberal artistic perspectives that I call). The last two chapters are a particularly interesting shift from traditional texts. They are 2015: Classical and Contemporary Discovery in the Human Body and Body Wisdom. Among the topics mentioned are pathogen theory, genome project and intelligent design. Creative/evolutioning questions are addressed to build evidence for the Creator's intelligent design concept. Questions Test your understanding at the end of each chapter that challenges students' understanding of biological systems and functions and, sometimes, about evidence for design (e.g., Listing evidence for human eye design). Heavily illustrated in black and white, the book has both a term board and an index. At 170 pages, considering redirection into history, biography, and smart design, the book doesn't include as much data type information as standard text can. This makes it awkward to figure out how it fits the curriculum. In my right, coverage is very suitable for the art of self student-oriented and those looking for a access to education. However, it needs to be enhanced to include a full-year course or be used as a supplement to a standard text. You can consider expanding anatomical and er20m research with further investigation into the topics introduced in the book and/or reading one or two books from those referenced in a list at the back.
