## Reading a solubility chart worksheet

Most processes can be viewed visually by using a process flow chart. The concept of the flow chart was once associated with the realm of software development, where it was necessary to analyze the algorithms that were programmed. Since a process can be seen as a kind of algorithm, the practice spread into the business world. Charts are designed to show where action needs to be taken, where decisions need to be made and what the results of these decisions can mean. Once you've learned to read the symbols, it's easy to read and implement a process from a flowchart. Find the beginning of the process. This will normally be a capsule-shaped object with the word Start Inside, but sometimes this symbol is omitted and the first step in the process is depicted as the starting point. Follow the arrow to the next box. Identify the type of box that the arrow leads to. Traditionally, rectangles and rounded rectangles represent process steps and alternate steps respectively, and diamonds represent decision points. For most process flow charts, these are the only symbols you want to see. Perform the action required in the block. If you just read the chart, perform the task mentally and go to the next block. If the block is a decision point, select one of the options available and follow the arrow for that option. Come back later and follow the second option. Repeat the process of identifying and executing until you have covered the entire process. Candlestick charts were originally developed centuries ago by a rice trader in Japan. They have become one of the most popular methods for mapping market movements in day trading. Many day traders believe they can predict share price changes by looking for certain patterns in the candlestick charts. Understand the parts of a candle. The part that is filled in is called the body. It starts at the opening price and ends at the closing price. The thin line under the body is called the tail. It ends at the lowest price of the stock for the day. The thin line above the body is called the shadow. It ends at the highest price of the stock for the day. Determine the time frame of the chart. Each light on the chart represents a specific time period. The time frame can be anywhere from two minutes to several months or years. The bottom of the chart is marked with time intervals. Determine whether the share price went up or down during the trading period. The color of the light tells you if the stock closed higher or lower than it opened. Red or white means the share price went down. Blue, green or black means the share price went up. Most mapping software will let you choose the colors you want. Find open and close off trading for the day. If the light is red or white, it is open on top of the light and close is at the bottom. If the light is blue, green, or the open is at the bottom of the light and close is on top. Determine the scale of trading for the day. Look at the length of the whole light from tail to shadow. A long light means that prices varied widely during the day. A short light means that the stock is traded within a narrow price range during the day. Interpret the length of the body. If the body is long, it means that the price made a big change during the day. If it is short, it means that the closing price of the stock was very close to the opening price. Interpret the length of the tail and shadow. A long tail means prices dipped low, but came back up before the end of trading. A long shadow means that prices rose, but came back down before the end of trading. Put it all together. For example, a short red light with a long tail means that prices fell during the day, but closed near the opening price. Tip Learn to recognize basic patterns in candlestick diagrams. Look for candles with short bodies and long tails or wicks. They often signal reversals in stock trends. Most mapping software allows you to choose Candlestick Charts as an option. Warnings Remember that candlestick patterns can be interpreted in many ways. Always wait for confirmation of a pattern before investing. In the long run, a company's share price depends on the basics. How profitable a company is and how well it wins and maintains market share and growth in revenue and earnings ultimately determines the value of the stock. But over short periods of time (days, weeks or months), most stocks tend to follow trends that shift back and forth. Analyzing these trends and trading the stock accordingly is the bread and butter of short-term stock trades. The stock chart is among the most important tools for these traders, and knowing how to read stock charts is important. Print a sample inventory chart to examine (see More resources, below). Stock charts can be defined in a daily, weekly or long-term format, but they all follow the same basic plan. Start at the top where you want to see the stock symbol and the date of the chart. Also at the top are the current high, low and closing price and the volume of shares traded. Look directly below the top line of information. You will see an entry that says MA (30), MA (60), or another number. This is the moving average. That's the average price of the stock over recent past. The number in parentheses tells you how many days moving average covers. At the very bottom of the chart, there should be a bar graph. This gives you the volume of stocks traded every day the chart covers. Examine the main graph between the top and the volume bar chart at the bottom. Every day's trading is usually represented by a short bar or candlestick. The top of the bar indicates the high for the day and the bottom the low. If there is a graph line that passes through the indicates the closing price. Note which way the graph of the share price is pointed. If it's heading for the upper right corner, the stock is in an upward trend. If it is pointed in the bottom right, it is in a downward trend. Sometimes the graph does not seem to move one way or the other, and traders call this a period of consolidation. Understand the function of a stock chart. The point is to discover trends early so you can buy early in an upward trend and sell early in a downward trend. Traders use a number of indicators to do this. For example, look for price supports. A price support is a price below which the stock rarely falls. As it approaches price support, it is likely to reverse the downward trend and start moving upwards. A price resistance is the same in reverse: a price the stock falls short of. If it comes close, the share price tends to reverse direction and decline. Tips There are many online resources that provide stock charts or allow you to create your own. Most major brokerage firms make these online tools available to traders. Do not fail to pay attention to news that affects a company whose stock you are trading. A fall in profits or the introduction of a new product line can start stock moves in a way stock charts cannot predict. Long-term investors should make use of stock charts. While you can plan to hold a stock for years, it makes sense to buy at as low a price as possible. Using stock charts and trend analysis, you can discover when a stock you're interested in sells at a particularly good price. Last updated on December 18, 2020 Inherent, the 20-000 travelers double as a social butterfly. They can strike up a conversation on a whim and somehow manage to

find common ground with individuals from all walks of life. Travelling on your own can be incredible eye opening and enriching, but it will also equip us with skills necessary to succeed. Communication and interpersonal skills are qualities that can be learned and honed. These skills apply in everyday life and can be translated into professional environments. We are inherently closed for my first lonely travel experience. I had just come to San Francisco for an external ship. There was a problem with our train and we had to switch to a new train on the next platform. A gentleman who had done polite conversation decided that it was now his task to help me move my things to the next train. Even though I was well-meaning, I was appalled. I wasn't used to strangers' kindness, in fact I thought he was trying to rob me or worse. Kindness is somewhat regional. And growing up in the tristate area, I had been conditioned to be extremely skeptical. Interaction with strangers seemed incredibly taboo. It is shameful to admit, but social skills have fallen in We've forgotten how to talk, each other. The idea of breaking up a conversation with a stranger is borderline terrifying. But more frightening still, the lack of effective communication will eventually lead to a lonely life. Keep the passion aliveA very wise man once said that before he fully commits to anyone, take them on a trip. This wise man is Bill Murray - and he's telling the truth. Travel can be a very vulnerable time for many, often it can bring out the worst in humans. But if you are able to overcome the inevitable obstacles that will arise during the trip, travel has proven to strengthen relationships. It gives yourself and your partner an opportunity to share in a common goal. Just being in a different environment, free of all your daily commitments that tend to get in the way, will help reignite romance and intimacy. It will give you both the opportunity to return to some problems that would normally initiate an argument- in a safe, romantic setting. Couples who regularly travel together have reported having more effective communication with each other than those who do not. You'll never see the world the sameThe greatest revelation you can experience when they immerse themselves in the tourism style is the realization that not everyone thinks the way you do. Not everyone lives the same way you do. Different cultures have different philosophies and priorities. Breathe, relax, enjoy Growing up in a place where the results are expected instantly, I did not take good to the idea of waiting. I mean, what's waiting? I placed my order, and I want it now. There was clearly impatience smeared all over my face. The server that took my order ever asked me so innocent: Why do you look upset? You have a few extra moments to just enjoy life before you receive the food. He was so right. Why did I get upset? I had nowhere to be. So I took his advice. I took a deep breath, taking in all the beauty that surrounded me. Patience is a virtue. And when you travel, you have no choice but to be patient. Learn to roll with punchesTo everything works out as planned, things are going to have to go wrong. When you travel, you are exceptionally vulnerable to these mishaps, with very little certainty if things happen to not go your way. This can be incredibly scary the first few times around. This can even deter someone from deciding to continue. But if you can hack it and take hits as they come, you will eventually develop the patience of Saint. Bad things are going to happen; let them. You'll find another way. When things don't work, you need to be patient not only, but also adaptable. You need to be able to remember and strategist, or at least accept the situation at hand and roll with it. It's not the situation- it's your reactionIn an avalanche of positive effects, your increase in patience and will again make you a kinder, less skeptical person. Because at this point, you get it. We are all human beings, do our best to get by. So just stay cool. Conflicts are going to arise, and how you choose to deal with them will determine the outcome. Alternative forms of communicationEvery new and unknown can seem intimidating. Especially when traveling abroad, especially if you are traveling alone. If you're something like me, you're enjoying the somewhat abrasive kind of culture shock. Everything is so alien, so incredibly different. This can make communication difficult. I literally don't speak their language. Chances are, I'm not going to be floating overnight or anywhere in the near future. But I can still ease my struggle by learning some important phrases in the language where I visit to get by in everyday life. More likely than not, I will slaughter the pronunciation. The average person will get most of what I try to say and appreciate the effort - regardless of the poor execution. Non-verbal communication will be your saving grace. You will develop the ability to convey your opinion without words. Without realizing, you can begin to mirror the behavior of those around you to establish a foundation of common ground. Only in this short time do you develop. You've picked up new manners that will channel into your existing personality and habits. This experience literally becomes part of you, changing how you think and how you behave. Photo Credit: VideoHive via [videohive.net](https://www.videohive.net)
