Landline text error

Usually when I list something for sale online and someone wants to contact me by phone, I give them my home number, a stable phone. I don't often hear from them again. Could you send me a message? If you send text to a stand-in line, will you get an error message or will it jump back as an email sent to a bad email address that says it could not be delivered? It depends on the carrier. I got an automated response that shows that the number I was trying to text was stocked. I'm sure verizon's position lines will respond by saying their message mentions a way to convert your text into a smail voice message (voice send?). I'm not sure about the other carriers. This still seems like a Google-capable question.... you won't get an error message, you can test it yourself, send text to your home number. SINCE the above announcement is that certain services may give you one, it is irrelevant to you under your circumstances. Last edited: Sep 26, 2019 On my phone returns and tells you it is land and wants to know if you want to forward your billing message, yes, that's what Sprint does. It depends on the carrier. I got an automated response that shows that the number I was trying to text was stocked. I'm sure verizon's position lines will respond by saying their message mentions a way to convert your text into a smail voice message (voice send?). I'm not sure about the other carriers. This still seems like a Google-capable question..... ^ Yes, I got this message when I sent a message last week to a machine guy who gave me his land number by error. I got Verizon. Im buying..... I have AT&T, I just sent my grandfather's home phone test. I got this back from AT&T: at least you got the message back. It seems that some senders don't notice that their message never got through. So it depends on the sender's mobile phone laptop and not the stam. Leverage google voice as your number and you can get texts and calls (any phone) with a single number. Last edited: Sep 26, 2019 Leverage google voice as your number and you can get texts and calls (any phone) with a single number. So I need to turn on my computer and log on to Google every time I want to check if I got a call? Leverage google voice as your number and you can get texts and calls (any phone) with a single number. So I need to turn on my computer and log on to Google every time I want to check if I got a call? No. You can use the GV app on your phone or all texts and calls are forwarded to your mobile number. When you reply, it appears as your GV number. It's flawless for both you and the other person. Another option about Google Voice is very good junk messaging messages I plugged our user number to GV (via mobile phone for use) and used the Obihai device to connect. With this we can keep the old number of the contact number and we can receive and receive calls for free. Not that we do it anymore, but there are still some people who have a number and we hardly receive unwanted calls at home. Leverage google voice as your number and you can get texts and calls (any phone) with a single number. So I need to turn on my computer and log on to Google every time I want to check if I got a call? At least you got the message back. It seems that some senders don't notice that their message never got through. So it depends on the sender's mobile phone laptop and not the stam. Carriers probably have the ability to know whether the phone number is assigned a mobile # or a stable phone. If they do, they can automatically respond with a message as mentioned above that says this is not a mobile number..... That would be from the sender's phone company. If you see an automatic message that says that your text has been sent to a line of accounts, but it can be converted to voice mail, that is, from the recipient's phone company. Leverage google voice as your number and you can get texts and calls (any phone) with a single number. So I need to turn on my computer and log on to Google every time I want to check if I got a call? No. You can use the GV app on your phone, or you can set it up so that all texts and calls are forwarded to your mobile number. When you reply, it appears as your GV number. It's flawless for both you and the other person. But the point of giving a home number is that I don't have to use a cell phone. But the point of giving a home number is that I don't have to use a cell phone. Okay, but you give them google voice number, neither your cell nor your home number. That's just what they see, not your real numbers. Yes, I get this, but to access messages, I have to turn on my computer and log on to Google every time I want to check if I got a call, right? With my contact line answering machine, I know there's a message when the light flashes and you can press one button to listen to it. Yes, I get this, but to access messages, I have to turn on my computer and log on to Google every time I want to check if I got a call, right? With my contact line answering machine, I know there's a message when the light flashes and you can press one button to listen to it. No, you'll get messages or calls directly or through the Google Voice app. Either way, they come in real time. Google Voice also has a voicemail feature, so if you don't want to take the call right then you don't have to do it. He's going to record the call and provide a transcript. If you do not set it up to forward calls and messages, they will not be forwarded to your mobile but stay on Google Voice and can be obtained through an app or web. But if you turn around Forwarding then come to your mobile phone as a normal call or text would be made, but using your separate Google Voice number, which is all the dialer will see. Page 2 To get this, but to access messages, I need to turn on my computer and log on to Google every time I want to check if I got a call, right? You don't have to turn on your PC, but you need to check your mobile phone's in receipt. With my contact line answering machine, I know there's a message when the light flashes and you can press one button to listen to it. And your mobile phone will similarly let you know that someone has tried to call your Google Voice number and leave you a voicemail or text you. You are trying to solve the problem that would give customers your home numbers a staune number and then don't know if they may have tried to text you on that number. AFAIK, there is no solution to this problem. You can only hope that the mobile service provider used by the customer gives them a notification that the text could not be delivered, but not all mobile carriers do so, as has already been mentioned. You are trying to solve the problem that would give customers your home numbers a staune number and then don't know if they may have tried to text you on that number. AFAIK, there is no solution to this problem. yes, that's it. When you send an e-mail message to an invalid e-mail address, it returns. Why doesn't that work with all the texts? Why doesn't that work with all the texts? If you want an acceptable answer, you won't get it. It's not working. SMS (a technology that sends and receives text messages) does not have a protocol to confirm that the message has been received until the other end. The other end simply does not answer the message rec'd. He doesn't do that. Period. This isn't e-mail. Email protocols have this ability, but email is not SMS and SMS is not email. Think about it: You want the voice service to talk to text-based services. Incompatible systems (normal). For those who prepare to say that they know if a message sent from an iPhone on another iPhone tells them that it has been delivered and in some cases, the message has been read, nepe, a different system. This is iMessage, not SMS. Yes, I get this, but to access messages, I have to turn on my computer and log on to Google every time I want to check if I got a call, right? With my contact line answering machine, I know there's a message when the light flashes and you can press one button to listen to it. If you have voice mail enabled, you can call your Google Voice number and get messages. Otherwise, it will ring on your answering machine. You can also send text or email to have voicemail there if you enable voice mail on it. It is extremely flexible and worth the test. This makes trading people on CL or FaceBook etc. a reasonable experience. Be aware that people under the age of 30 to 35 do not understand when the person hands out a phone number. Last edited: Sep 26, 2019 You are trying to solve the problem that would give customers your home numbers a shable number and then don't know if they may have tried to text you on that issue. AFAIK, there is no solution to this problem. yes, that's it. When you send an e-mail message to an invalid e-mail address, it returns. Why doesn't that work with all the texts? In your ad, type a note that the contact's phone number can't receive text messages and leave a message. You are trying to solve the problem that would give customers your home numbers a staune number and then don't know if they may have tried to text you on that number. AFAIK, there is no solution to this problem. yes, that's it. When you send an e-mail message to an invalid e-mail address, it returns. Why doesn't that work with all the texts? In your ad, type a note that the contact's phone number can't receive text messages and leave a message. Only my opinion, but if you really want to sell something, you have to make it easier for people to buy. This includes the ability to communicate via text because so many younger generations communicate these days. If you're not willing to make it easier for others to buy your stuff, why are you wrong? I can also say if someone really wants what I'm selling, they'll try to contact me. I don't expect them to use the pigeon carrier. You see something for sale on the Internet, you use Internet communication, such as E-mail. At least for the initial contact. I can also say if someone really wants what I'm selling, they'll try to contact me. I'm sure you've never worked in sales before. You see something for sale on the Internet, you use Internet communication, such as E-mail. At least for the initial contact. You've been out of touch for 10 years. You claim to be using a modern method of selling goods, but do not match today's primary method of communication. Tip: This is a message or similar messaging service. Hint #2: Younger people, especially 30-35 and younger, will use email as their secondary method of communication. 1. Text, WhatsApp, FB Messenger, Snapchat messages, Instagram messages, Twitter DM 2. E-mail 3. Phone (voice) You can accept and customize this, or you can complain about it and you can't get anywhere. Your choice... I can also say if someone really wants what I'm selling, they'll try to contact me. I don't expect them to use the pigeon carrier. You see something for sale on the Internet, you use Internet communication, such as E-mail. At least for the initial contact. Yep, if someone wants to really buy something they see on-line, it will fund a way to contact the seller, even if it means actually making a phone call on their phone instead of sending text. I don't think anyone's going to say: I really want to check out and maybe buy it, but the guy can't get a text message, so I'm just going to forget about it. If so, the world is fast becoming a very sad place. I can also say if someone really wants what I'm selling, they'll try to contact me. I don't expect them to use the pigeon carrier. You see something for sale on the Internet, you use Internet communication, such as E-mail. At least for the initial contact. Yep, if someone wants to really buy something they see on-line, it will fund a way to contact the seller, even if it means actually making a phone call on their phone instead of sending text. I very much doubt that someone will say, 'This is something I really want to unsue and maybe buy, but the guy can't get a text message, so I'll just forget about it.' If so, the world is fast becoming a very sad place. Sending messages is a simple question that is still available, even if a person is accessible to text or a call. It's generational, but I don't usually respond to a call unless I have an expectation or know who it is. I wouldn't be wrong to leave a message, because a person can turn around at a random time. If your business sells, make it easier for any customer. I think op doing it for money so as not to get rid of stuff stuff
