Page 2 Top Rating The most recent Top Rating I found this book to be a great overview, inform and interesting for me as someone who is interested in this topic but who never really learned much humanities when I was in university majoring in other subjects. This book covers a lot of important things that are not too dense with details. There is a nice selection of images that support very well, and the book is laid out very nicely and reasonably. This is clearly a textbook and is presented as such, with a summary of topics and learning questions at the end of each chapter. For a real Humanities major, this may be too much of a general survey, but I'm enjoying it a lot for my own purposes. I know a lot of humanities 1 course is currently using this writing specifically for introducing survey type clases. There are a few different versions of this text out there. This includes short readings selected at the back from the various classics that have been mentioned in the chapters... such as works from Plato, Iliad and Odyssey, etc. The translations of the ancient texts are quite good and modern in style, easy to understand and interesting to read, and provide a good feeling for the nature of the famous template of the first material. Note that there are other versions of this text that do not include readings, which are also sold in separate volumes of just the readings. If your instructor has specified the text the reading but you do not require a card access to supersite for textbooks, this is one of the orders. You can safely order a version of this used. Another version says that it comes with an Access Card Print Resource Center (this will only with a new textbook, be aware you will not get cards with any used books) but that one does not include readings, which will then have to be purchased separately if they are needed in a class. The version of this book is out somewhat confusing, so if ordering for a class be careful which one you order. I would suggest getting the #ISBN for the correct text needed in your class, and that way you will get the correct text.
