Device spoofer apk

Download Device Spoofer 1.4.2.apk APK Black Files version 1.4.2 com.scheffsblend.devicespoof Size is 129748 md5 is 51d529e398a4c83eb4005e66c3e97030 Updated In 2013-09-07 By 2013-09 By 201 higher Comid: com.scheffsblend.devicespoof Keywords: scheffsblend, devicespoof, tools, device, spoofer Version: 1.4.2 (7 code) Dev: Scheff request: Eclair 2.1 API level 7, NDK 3 or higher Updated: 2013-09-07 size: 126.71 KB (129748 Byte) MD5: 51d5 29e398a4c83eb4005e66c3e97030 Cpu: Screen: SMALL 1.4.2 -Fixed reported CC and updated default database with 400+ device build.prop info. 1.4.1 - Fixed FC when starting and updating to a new database moved to new URL - Added display of current device information 1.3 - Fixed a nasty error where build.prop will be empty 1.2 - Added authentication after spoofing. An on-screen notification indicates whether the spoofing was successful or not. 1.1 - Device support without cp command. Other Devices Spoofer APK version for Android NOTE: You must have the Xposed Framework installed on your device in order for this app to provide all the features. This app allows Xposed users to spoof their devices on much more modern devices to bypass restrictions in many apps that contain in-app blacklists and whitelists. This can also be useful when developing application is released for production is still very new, therefore expect additional features to come out soon. I have some great ideas in my head that can be used to distinguish them from other similar applications. I also try to fix bugs and read reviews, so if you have any problems, feel free to contact me. Features - Spoofing Manual Input Device - Allows users to manually enter their own device properties if they feel comfortable or want to be faked as a specific device. → Included device templates, including Samsung Galaxy Note 3, Samsung Galaxy S7 Edge and Huawei P8 and some others to be used as spoofing devices. (Please note that more devices are being added in the future). - Specify identity spoofing apps - Unlike other apps alone. This integration allows Spoof My Device to be more secure because system applications that rely on the properties of the actual device cannot fail. Spoof My Device [Xposed] 2.0.2 Description Spoof My Device [Xposed] is developed by Prashant B. (PBombNZ) and the latest version of spoof my device [Xposed] 2.0.2 was 4. Spoof My Device [Xposed] is in the Tools category. You can check all applications from the developer Spoof My Device [Xposed] and find 67 67 spoof my device [Xposed] on Android 4.0.3+ on APKFab or Google Play. All APK/XAPK files on APKFab.com are genuine and 100% safe with guick download. Note You must have the Xposed Framework installed on your device in order for this app to provide all the features. This app allows Xposed users to spoof their devices on much more modern devices on much more modern devices and whitelists. This can also be useful when developing applications in an emulator where real information is needed. Although this application is released for production is still very new, therefore expect additional features to come out soon. I have some great ideas in my head that can be used to distinguish them from other similar applications. I also try to fix bugs and read reviews, so if you have any problems, feel free to contact me. Features → Spoofing Manual Input Device - Allows users to manually enter their own device properties if they feel comfortable or want to be faked as a specific device. → Included device templates — Allows users to also select various device templates, including Samsung Galaxy Note 3, Samsung Galaxy S7 Edge and Huawei P8 and some others to be used as spoofing devices. (Please note that more devices are being added in the future). - Specify identity spoofing apps - Unlike other spoofing apps, Spoof My Device only spoofs apps that users want to be fake and leave all other apps alone. This integration allows Spoof My Device to be more secure because system applications that rely on the properties of the actual device cannot fail. Spoof My Device [Xposed] 2.0.2 Update I listen actively for your feedback and improve the application experience based on crash reports as well.* Fixed an error where pressing the on-screen button back on the Device Selection page would cause the app to crash. Automatic Virus Scanner Get rid of spam & amp; other unwanted files! ONLY FOR ROOTED DEVICES! Have you ever wondered why an app or game you hear about people who don't hear about it doesn't appear on the market for you? It's likely that the developer has decided not to add your devices. Maybe there's an app that offers some special offer to a specific device or device brand, and you're one of the unfortunate ones who doesn't have a brand or device. Well, if any of these scenarios happened to you, then there's something you can do about it without burning more money on another device to make it look like a completely different device. It's as easy as: 1. Back up up up-to-date information Device. 2. Select the device you want to fake, 3. Press the Spoof button of the selected device, Spoofer equipment an ever growing database can stay up to date and contain all the information needed to spoof almost any other Android device, **FYI** For the market to see your device as newly fake, you must first download the app from the market. Once you do this, the device appears to register under your account and then appears as a fake device. ** WARNING ** Developers may have good reason not to support your actual device. Please do not contact them if you have a problem with their app or game. Chances are good that if it doesn't work directly on your device, the developer was aware of this issue and decided not to support it. With that in mind, please enjoy! ** PROBLEMS ** If you have any problems or problems using this app, feel free to use the Send email link listed in the Android Market. Please do not leave a comment if you have any problems with this app. Instead, write to me so I can work with you to solve the problem. This app has been developed and tested on multiple devices, including nexus one and custom ROMs. Write external storage Allows you to write to external storage, such as an SD card. Internet Allows access to the Internet network. Read external storage Allows you to read from external storage, such as an SD card. Card.
