We take a look at the best mods for Minecraft 1.16 that are currently available. Although not everything you're used to is updated yet, there's still a lot of good stuff out there and we've sift through everything to give you the top options to change your current build of the game. One of the biggest things about Minecraft is the ability to play it in its own way. While there's a solid base game that you can enjoy happily, you can boost it as far as you want to go with so many amazing mods. You can change all the gameplay, or you can simply add a simple mod or two just to alleviate a part of the game that you might not find overly enjoyable. Be sure to read through the description of each mod! Some require specific libraries and mod loaders to work properly. All the best Minecraft 1.16 mods list If you are looking to really vary your next Minecraft world, then one of the best ways to do it is to install the Biomes O' Plenty Mod. This will add a ton of beautiful new biomes that you can explore in the Overworld and Nether! There are coniferous forest, meadows, Alps, cherry blossom groves, seasonal forest, pumpkin paving, maple wood, pasture, lavender field, grove, tropics, volcano, crystalline abyss, undergrowth and much more! If any of these sound is interesting for you, make sure to pick up this mod right away! When you start a brand new game, check out our Minecraft 1.16+ Seeds! Mecanism This is less a mod and more of a total game changer! If you are ready to really improve your machines, then you can add Mekanism as your next game modification. This adds a ton of new things such as seismic vibrators, cables, boilers, and even allows you to create a hydrogen-powered jetpack to fly around! If you want to try a whole new experience in Minecraft, then this mod will help you do it! Proper If you are tired of the same old Minecraft UI, then neat is a mod that will modernize it for you. This reminds me of some of the things you do in World of Warcraft where you can clean up your toolbar add name tags to enemies! It's a simple mod, but this will make a big difference in terms of clutter on your screen. Memory drawers If you are a bit of a nice freak, then you will welcome this mod! This will give you a number of different storage options that will make your construction area look like a well-organized shop. You can create memory with multiple different sizes and have a number of different drawers: Half-size 2x2: Saves 4 stacks per drawer. Half-large 1x2: Stores 8 stacks per drawer. 2x2 full size: Stores 8 stacks per drawer. 1x2 full size: Stores 16 stacks per drawer. 1x1 full size: Stores 32 stacks per drawer. Use all of these to make things really easier for you if you want to build the space where you have the majority swirling! Decorative blocks This is again for the decorative builder out there who needs more blocks to work with. This mod will give you some wonderful new additions to the game that can add really immense details to your builds. You will receive a campfire, straw, wooden palisades, wooden beam blocks, brifiers, chandeliers, rocky dirt, stone column, large chain, bar plate, grids, wooden seats and wooden supports! That's a whole lot of extra blocks to bypass your next home. AppleSkin If you're a hardcore survival player, you probably know the battle to keep yourself fed and saturated. However, this process can be made much easier with the AppleSkin Mod! Instead of just seeing your hunger status, you'll now see a visualization of your saturation level. This gives you much more information about when and what you need to eat. If you choose a food, it will also show how much hunger and satiety it will replenish! Xaero's minimap If you don't want to deal with maps in Minecraft that can be a bit cumbersome, then it's a good idea to grab a minimap. Xaero's version is pretty good and keeps the spirit of Minecraft in its design. I love card mods because I tend to explore some seeds and they make things a lot easier. If you want to go further, you can also get Xaero's world map to give yourself a lot more scare. Gravestone Mod If you are tired of mining for hours and then die terribly to lava or a creeper then this mod could help ease some of your frustration. This gives you a death note when you die, which has the exact coordinates for the place where you died. If you go to where your body should be, you'll find a tombstone instead. If you use the tombstone your whole booty will pop! Fast Leaf Decay (Forge) One of the strange things about trees in Minecraft is that if you chop one the leaves for a while. They are slowly disappearing, but this can be confusing and strange. So, the Fast Leaf Decay mod tries to make this better by fading much faster. By default, with mod, it only takes about five seconds for them to evaporate from existence. Iron Chests This is a very popular mod that adds the ability to create a ton of different chests with different qualities that have a whole lot more storage potential! There are chests that you can make of dirt, iron, gold, diamond, obsidian and much more. Only enough items A very popular mod that will allow you to see the recipes and all and everything needed for making a particular item. It has a great search system and even allows you to search for items from other mods! Ara's Bridges While this is a fairly simple mod, it adds a pretty fine feature to the game. While you would normally put in a way of creating your own bridge, this mod will give you some beautiful looking blocks to create with. They can be all of the different types of wood, as well as a lot of the different stone that is available in the game. If you like to have a beautiful look and feel to beat your world, then you will want to have some beautiful looking bridges! Miner's helmet If you want to give yourself a bit more of an authentic mining feeling, then why not go to the caves with a mining helmet! Instead of placing a ton of torches anywhere, you can attach this helmet, which has a light on it, to illuminate dark areas where you explore. If you don't want to tinker with it yourself, you can always look for a few zombies that have the ability to spawn with the helmet and an iron pickaxe! How-to Install Mods First, you need to have a PC version of Minecraft. Not only that, you must have the Java version of the game. If you have the Windows 10 version, there are some very limited addons that you can install, but they are nowhere near the mods that can be added to the Java version. Now that you have the square away, you will want to download Forge, which has been updated for 1.16. Make sure you download the installer version unless you have a good idea of what you're doing. This will install it automatically in your Minecraft folder, and you will be able to launch the Forge version from the Minecraft Launcher. Go ahead and start Minecraft, you'll now see a mods selection on the first screen you see when you open Minecraft. Click on that then click on the Open Mods Folder button in the lower left corner. You can now simply drop all the mods you download directly into this folder and manage them in-game with Forge! Forge!
