Part of the DIY community since 1978, attend car shows, listen to customers and see first-hand how our products are used in vehicle manufacturing that our customers take pride in offering. The solution, which combines over 4,000 of our over 4,000 unique products with do job right methods, in-house product design, development and testing with a strong history of high quality products, innovations used and trusted by leading creators to start ordering produces surfaces that are more resistant to chipping and wear than other surfaces, and the color selection is almost unlimited. With high gloss and low metal and clear finish. For the best combination of color, safety and affordability, use the PPCCo powder coating. It also creates more dynamic effects and takes less time to dry. Our powder coating equipment has everything you need for amazing results at a low price, also known as electrostatic coating, PPCCo powder coating gun provides professional results for a fraction of the cost. Choose from over 100 colors including metal powder, translucent candy and chrome powder, our incredible one-step Assortment of 30 plugs of various sizes used to waste the bolts and support parts in the oven during curing. Reusable Silicone Plug - Prevents the accumulation of powder in critical endurance areas such as spiral holes and other reusable silicone caps. These bottles with lids are conveniently stored for all your powders. The cup will thread directly to the 10198 and 11676 Eastwood powder guns. This polyester tape has silicone adhesive and is suitable for powder coating. and can also be used for electronic coating, plating and anodized. More details Customer Reviews QUESTION & Quick change or home shop. Coat and heal in less than an hour! Easy to use very durable finish, guick change color 11,000 volt output This innovative, affordable powder coating gun allows you to work professional-looking powder coatings at home. What you need to add is a compressed air source (5-10psi) from a portable tank with a controller or compressor). Electric oven or dedicated toaster oven and powder paint, why powder coating? You will find the powder coating surface is resistant to chipping, scratching, fading and wearing over other finishes and selecting virtually unlimited colors. And thanks to the UV resistance of many powders, the color remains bright and vibrant. The selection of surfaces ranges from smooth to wrinkled or matte surfaces, as well as rough surfaces designed for hiding surface imperfections; one 8 oz powder bottle (not included) covers the same area as 2-3 cans of spray paint and cleaning is easy, since you can sweep oversprayed powder, no environmentally harmful solvent. Import the original HotCoat gun with power source and instructions using a disposable dust mask. When handling or using powders, such as regular powder hanging in high-concentration air can explode to reduce the risk of explosion - sweep up, do not airtight powder from the ground. Treat the powder in a well-ventilated area. The polyurethane powder we sell releases a very minute volume of isocyanates when the powder flows out. This usually happens about 3-5 minutes after putting the parts in the oven for baking, wearing a respirator such as our SAS Bandit ventilator (11455 or 11456), cartridges when curing or monitoring progress flow. A: for better flow (less orange peel), Bake the coated parts at 500 degrees F until the powder flows out (about 3-4 minutes for light sheet metal parts), then reduce the heat to 400 degrees F for 15 full minutes. Q: What are the electricity requirements? A: This hot gun coat requires 110-125VAC, 2amps at 50-60Hz. Can be used with voltage transformers such as 220-240VAC to 110-125VAC as long as the transformer can support 2 amps, diy hotcoat powder coating gun is traditionally an innovative system that will help you benefit from coating small powder parts instead of coating with paint. All you need is a compressed air source (5-10 PSI from a portable tank with a controller or compressor) and an electric oven. The powder coated gun comes with a 1/4 male entrance, so you'll need a female Bayonet. It also requires pipes (male ends) and female joints, also comes with stepdown transformers that allow it to be driven from the main outlet 230-240Vac UK, powder coating allows you to coat and maintain metal parts in less than an hour and provide a very durable surface with seams and chip resistance. It prevails over liquid coating, it is easy to use with drip or overspray and without environmentally harmful solvents 3 steps: strip and clean your metal parts before coating the coat all parts—You can not overcoatcure your part in an electric oven for about 20 minutes. Professional effect Quick color change finish ensures setting, easy to use, and easy to clean excellent liquid. Depressed switch activates the power gun Powdercoat to charge the powder, moving the gun at slightly different angles to ensure that all areas of the section are covered. The coating surface is opaque, dull - after being treated in the oven, it has a glossy surface. Make sure that all areas of the parts are coated evenly. Place in the oven and bake for 15 - 20 minutes at 400 deg. All you need is a compressed air source (5-10 PSI from a portable tank with a controller or compressor). Mains power supply and dedicated electric oven Different colors of hotcoat powder coating are also available.
