We are also working on community categories that will be released in the near future. Download PS4 Remote Play and play your favorite PS games on your PC and join our fan community. PS4 Remote Play PS4 allows remote access to the game, so you can play on any connected device. The performance of the client device is almost non-critical because the PS4 performs all processing. So here are some tricks on which device you use, so you can enjoy the game wherever you are. Play some awesome action games on your PS4, with dual shock in your hands, how good it is to sit on your big 4K TV! That's how it should be. But if you're standing somewhere or your TV family occupies watching some shows, you're the only one who doesn't like... Well, there is still a way. The remote play feature integrated into the PS4 allows you to act as a game server to run games, receive controller commands, and broadcast photos to remote devices, regardless of computer or mobile. Let's see how this feature works. First, you'll need to enable this feature on your console, no matter which device you're using to prepare your PS4. This means that you turn on the PlayStation 4 and scroll down to the Remote Play Connection settings to check the box for remote playback connection settings, then go to the account management selection enabled settings to the default PS4, and select the available features in the remaining mode slot settings to keep the internet connected and now set to PS4. When you activate through your account, you turn it on and off without having to manually use it. Therefore, make sure that it is always powered and connected to the Internet. There will be some limitations. Say, you can't get 4K content through Remote Play, it's limited by 1080p. But on most mobile devices or PCs you will be fine with this. Some games are not supported. Then it's up to the developer to activate the feature. Updates: There is no way to overcome this. Why play on your PC? There are several reasons you may need to prefer remote mode from your PC in order to play the game yourself. Let's list some of them. TV is now occupied by families watching something. If you don't want to sign up, you will be good at playing away. You need to record some gameplay videos or create screenshots directly on your PC. There are other ways, but this one is pro. Although you are away from home, you want to enjoy your favorite games. Fortunately, this feature works not only over the Internet, but also over the local network. So you need an internet connection and ps4 remote play PC application. There is also a PS4 Remote Play Mac app. Both are available for free, and, officially, both are set up in almost the same way. It requires a dual shock gamepad, but it's easier to carry than a full console with a good enough screen. So, connect to your PC and start the app. It connects to the PS4 as soon as it loads, and the settings allow you to adjust the video resolution, frame rate, and text input method. To activate the connected gamepad, press the options button, as the instructions said. You can then use remote control by viewing familiar interfaces and controlling them regularly. PS4 Remote Play Mobile. Native games aren't enough today's mobile devices while boasting high performance and high screen resolution, as well as play PS4 games with them. It's easier for Android users because Sony offers the official Remote Play app on the Play Market. If your Google service isn't installed, you may need to download and manually install the PS4 Remote Play APK file with the same effect. You have direct access to the PS4 library and you can choose which games to play. The performance of your phone or tablet is not important (unless it is very miserable), because most of the work is done by PS4 hardware. PS4 Remote Play Android devices are responsible for the video, so you need to provide a reliable connection. Android devices can handle almost any wireless gamepad, including the official dual shock. But you can use virtual controls on the screen, mimicking the dual shock layout. Sony says it can get the best experience with its Xperia smartphone, but in fact other vendors can do a little trick on deep-rooted phones to activate it. To use PS4 Remote Play on an iPhone, iPad, or iPod Touch, you just need an official app. - It cannot be found in the app store. Therefore, a third-party solution called Remote Play - R-Play for PS4 is required. This is the only payment in the PS4 Remote Play Review because the official release remains (or I hope it will appear once). The second problem is that you need to purchase an MFi-certified gamepad to enjoy the physical controls. Jailbreak can help you connect the original dual shock you should own, you can find instructions for it, but it takes too much mayhem (and still guaranteed). So maybe it is usually quite cheap to buy some MFi devices is worth it. Keep in mind if you want to play on ps4 literally everywhere, you just have to follow a few rules: always stay online. If you enable all of the features like the one mentioned above, you don't have to keep it on. However, the connection should not be interrupted. Wired connections are generally faster and more reliable, so they are better for ps4 than Wi-Fi. Wired controllers work better for the same reason, but good wireless controllers are fine. Make sure your computer, phone, or tablet is connected to at least 5MBPS. This is sufficient for reliable streaming on the client side. If you're leaving for a long time, it's a good idea to make sure that your Internet access is prepaid for all the time you're away from. Far away.
