Ikea minde mirror hack

IKEA products are a great choice for any home because they are versatile and cheap. What's more, they are simple enough that you can customize them to suit your personal taste and style. Hacking normal furniture from IKEA is a great way to save money while adding something new and unique to your home. Here are some of the most amazing IKEA hacks that can inspire you.

1. Desk with Ikea Alex drawers as a base. Get the instructions on: Emily every day.
2. Ikea Billy bookshelves returned home library. Get the instructions at: Makerista.
4. A modern library card catalogue using Kallax shelves. Get the guide at: The Savvy Heart.
5. Ikea Vittsjo laptop board turned into classic gold bar cart. Get the guide on: Ikea Hackers.
7. Bed slats turned bathroom wall organizer. Get the instructions at: Ich Designer.
9. Ikea Memory mirror turned into a beautiful farmhouse window mirror. Get the instructions at: Upright & Caffeinated.
11. Three metal candlesticks turned pendant chandelier. Get the guide at: Kitchen Trials.
12. Plastic stool turned chic faux Mongolian perch. Get the instructions at: Darling Darleen.
13. Glamorous feather lamp from a paper lampshade. Get the instructions at: Pillar Box Blue.
15. Bookshelves turned kitchen island. Get the guide at: Golden Boys & Me.
16. Ottawa lights turned into a copper barn pendant light. Get the guide at: Kojo Designs.
17. Ikea Ekby Alex shelf turned into a minimalist vanity. Get the instructions on: A new Blooming.
18. Plain round mirror turned stylish wall accessories. Get the instructions at: Wonderfully Made.
19. The bookshelf turned into a storage bench. Get the instructions on: Feeling Fix. Every farmhouse needs a Farmhouse Mirror and as we all know they can get pretty pricey. So if your budget doesn't allow for a \$400 mirror, and even if you can... you just might want to save a finished with this DIY Framed Wood Mirror that starts with a \$9.99 IKEA Memory Mirror. When you have one, Steffi over at DIY Weekend Wife will show you how to transform it into a beautiful Farmhouse Frame. She walked with a stain... but you can also go with a paint treatment... maybe a falling white ... the sky is the limit and when all is said and done it won't cost more than \$25. Look, it's amazing you don't think. Enjoy! Photo Via IKEA hackers

Hanging a mirror is a painless way to add depth and interest to a wall. Mirrors reflect light and movement in a room, they're eye-catching, and they can make a room look bigger than it is. If you know us here at Curbly, you know we love a good IKEA hack. Today we reflect (sorry!) on some of our favorite IKEA mirror hacks and transformations, all in uniquely awesome ways. Keep reading!

1. Suspended mirror: This hack doesn't use an IKEA mirror at all - it's the tray that's the hacked piece! Source: Farm Fresh
2. This IKEA mirror was hacked with rope and some eye hooks for a unique installation look. While this model mirror is not sold in IKEA anymore, there are plenty of round mirrors to replace. Source: Curbly
3. A few small mirrors - like this thumbtack mirror hack - can completely bring a wall to life when grouped together. This project was made using a small craft mirror, an IKEA HEAT trudge, and a lot of silver thumbtacks. Source: Lonny
4. This IKEA mirror hack goes back in time with an antique look. Believe it or not, to make this aged piece, you don't need a mirror! It all starts with a picture frame. Source: HELLO Magazine, via Gran
5. Add abstract interest to any IKEA mirror (or glass, period!) by adding diluted glass paint. Source: Heimatabaum
6. This one is less of an IKEA mirror hack, and more so inspiration. Check out how these HONEFOSS mirror tiles are hung (note: these mirror tiles are not available in the US anymore, but you can buy them on eBay). Source: Apartment Therapy
7. More HONEFOSS tile inspiration! This time they are adding height and interest to a dark ceiling. Source: Upright and caffeinated
8. Check out this tutorial to transform an IKEA floor mirror into a faux farmhouse window mirror (on the cheap!). Source: Hometalk
9. There's no need to limit reflection to walls only - check out this DIY mirrored secretary desk using a HEMNES secretary desk and some overlays. This treatment can be applied to all kinds of IKEA pieces, from bedside tables to the back of shelving! Source: Made 2 Style
10. This IKEA vanity mirror hack was created by combining an IKEA mirror, and IKEA wall lamps. Source: IKEA Hackers
11. If you're always chasing the perfect selfie, this IKEA mirror hack is for you. Source: Studio DIY
12. This Mean Girls' inspired mirror would go well in your BFFs home. Source: IKEA Hackers
13. Sure, this IKEA mirror hack may look expensive, but don't be fooled! This hack only cost a few dollars. Source: Fall for DIY
14. Add a tassel to something and it's 1000% more amazing. This project doesn't call an IKEA mirror specifically, but you can easily make it from any round mirror. Source: Apartment Therapy
15. For a nautical look, this homeowner hung their IKEA mirror from rope. Source: Off for season
16. And finally, this IKEA mirror got roped up for a fun rustic look. Share this roundup on Pinterest!

Whether you are in your entrance, bedroom or bathroom, a mirror makes a great addition to any space. And fortunately for everyone, it's easy, thanks to IKEA, to hack a mirror that's unique mirror. Happy crafting! Have we missed any IKEA mirror hacks we should know about? Let us know in the comments! Continuing with the decoration of my bedroom, this time I will show you my latest mirror DIY, there is none other than an Ikea hack from an Ikea Memory mirror. A wall originally turned into a floor mirror, leaning against the wall with a very simple but very special design as it goes completely to match my DIY headboard too. Among the furniture we brought to Dublin from our apartment in Madrid was an Ikea floor mirror buttons, which also allow clothes to be hung from behind. The truth is that it's convenient but doesn't fit into the new bedroom decoration I'd thought (yes I know you haven't seen much, but it's unfinished and I'll teach you piece by piece because it's a 100% DIY bedroom). It took up a lot of space in the new bedroom. So I put the mirror up for sale in DoneDeal (a website that sells second-hand stuff - like the Spanish Wallapop - but in Ireland) and I started looking for a full-length mirror that doesn't take up too much space. Surfing the internet I saw this idea which I loved. It's a Ladder Mirror on Serena&Lily: Photo: Serena&Lily website screenshot But \$448 was out of my budget! So I said to myself: why not do it yourself? Said and done. It seemed to me to use the frame of a canvas that I had not used because the fabric was torn. That would be a good base for the mirror. Photo © Home archiLAB The canvas was 40x120 cm, so I needed a mirror of these dimensions. My first choice was to go for a glass and ask for a price quote. It would cost me €50 to cut a mirror of these measurements (Dublin is so expensive, in Spain it would be something else!). But to my surprise in Ikea there was a mirror of these dimensions without frame that is ready to hang on the wall for less than 9.99 €. How wonderful! Photo: IKEA website screenshot Ikea has always had the power to give me happy surprises. Never stop looking there when you're looking for something. So to start, I already had the base and the mirror. Photo © Home archiLAB The first part was to remove the torn fabric of the canvas by removing staples with a screwdriver and a pair of pliers. Photo © Home archiLAB You can see here the frame of the canvas ready. Photo © Home archiLAB At first I thought of the idea of making a mirror with legs. I had these two at home that I had once bought and in the end I hadn't used. Photo © Home archiLAB I'm going to tell you the process step by step as I did it thinking that these would be the legs so that you can see that the creative processes are not perfect nor do you get it right the first time or have it quite clear from the beginning. Then I changed my mind and went back to Serena & Lily's mirror. As in principle I was only going to put a horizontal transom up and down I needed a wooden strip like the one I used in my padded Headboard DIY. It is a strip of pine 46x46 cm and 1.8 m long. I really didn't have to buy it because I had leftovers from headboard, but the price is € at Woodie's in Ireland. I put slat on the frame to the correct length I needed. Photo © Home archiLAB And then I cut it. I used an electric saw because for all the work I do it is very useful, but as I already told you in the headboard post, it is not necessary. It is a soft wood that you can cut with a regular saw. Photo © Home archiLAB Both crossbar were clear, with the appropriate lengths. One to the top and one for the bottom. Photo © Home archiLAB So they had to be sanded. Also in this case I used an electric grinder (which in the way cost me €8.95 at Leroy Merlin in Spain), but you can grind it by hand with sandpaper. Photo © Home archiLAB It's time to join the crossbar with the frame. Note that seen from the edge, the crossbar was thicker and came out a little. This is an advantage as it is a mirror that would fill this gap and be adjusted. Photo © Home archiLAB I joined them with a tree delay that was long enough to pierce the strip and into the frame. Photo © Home archiLAB The next step was to paint with clear oak and varnish all the parts to be seen: the upper and lower cross bars and the sides of the frame. Photo © Home archiLAB So I glued the mirror. For this I used SIKA special silicone for mirrors. I applied silicone strings all over the wooden frame and then I put the mirror on top and let it dry for 24 hours. In fact this step should have been done at the end of everything as I had also joined the side strips of the mirror, but I didn't do it because I decided to incorporate them later when I commented above. If in your case you want to make the mirror the same as mine, skip the steps for gluing the mirror with silicone and later I will specify when you have to perform it. Photo © Home archiLAB At this time, what I had was something like this: Photo © Home archiLAB I wasn't entirely satisfied because when the mirror leaned on the wall, my legs were too short and to see myself completely I had to go very far back. It could have been hung on the wall, without legs, but I try to avoid making more holes in the apartment as it is for rent, and the day we leave it is going to look like a sieve full of holes. It was here when I decided to place two vertical slats on each side that acted as legs and support on the wall and it would allow me to have the mirror in a higher position. I bought two slats of 46x46x1800 mm that I sanded and varnished. Photo © Home archiLAB To attach them to the frame, I first made several holes in this one that would cross it from side to side as it would screw from inside so the screws were not seen. Photo © Home archiLAB It is important to mark well the height at which you want the mirror to remain, centered on the length of the side slats. Photo © Home archiLAB Once this was done I glued the side rail to the frame in the correct position and and it dry with the weight of the mirror on top. Photo © Home archiLAB After a few minutes, I bolted from the inside of the frame through the holes I had previously made. I put three screws on each side. It is important that this union be strong, which is why I used both silicone and screws, since it really is the union that will support the weight of the whole mirror and believe me that it weighs a lot. Photo © Home archiLAB The last step is to place the second lateral in the same way, always taking into account and being precise with the distance, to ensure that they are at the same level on both sides. That's why I put it on top of it, and I marked the position. Photo © Home archiLAB After all this, I allowed the mirror to dry out 24 h, so silicone got enough strength before putting it on the feet. This would be time to silently glue the mirror to the frame has done the process correctly. If this is your case, first let dry a day posts and the next day insert the mirror and let dry another 24 hours. And this is the mirror finally finished and in place. Photo © Home archiLAB I am very happy with the result because it is a very special mirror that I have done for very little money. You want to know how much I spent exactly? Photo © Home archiLAB Let's analyze the price of what it cost me to make the mirror: Broken canvas: € 30 (I really had it already and I had to throw it away, I did not buy it for this, but to be strict I will include what I paid for it. You can find it cheaper in cheap shops because what matters is the wood and not the fabric, which is what made it more expensive in my case). Even online you can only buy rack. 3 slats of 46x46x1800 mm (€6.89/pc): €20.67 Memory mirror in Ikea: €9.99 Silicone Sikaflex EBT White Multi Use Sealant Filler Adhesive: £6.73 bought at Amazon.co.uk oak varnish 250 ml: €10.99 Sand and Screws: I really don't buy these individually, but I buy more sandpapers in a package (likewise with the screws), but I would comfortably estimate about 10€ if you need something more like a brush. TOTAL: €89.26 In front of \$448 worth of what I saw and it's about €397, it's really not bad at all!! I saved €307. Photo © Home archiLAB Now I can see myself at a normal distance without having my head cut from the frame. Photo © Home archiLAB And really the mirror takes up very little space in the bedroom because it leans against the wall and slightly separated from below. Photo © Home archiLAB Since the mirror weighs quite a bit, it should not be moved from its position. If it was lighter it could slip easily, but the mirror itself weighs about 5kg and the slats another 5kg. Photo © Home archiLAB It also matches in the style of my padded Headboard DIY. You can already see a small example of how are with headboard, mirrored and of course hanging lamps I brought from my honeymoon in Burma and you can see how I put them together here: DIY Hanging lamps. Photo © Home archiLAB Did you like the mirror? I must admit that it is my favorite DIY so far. It brightens my day every time I see it! But of course, by removing the Ikea Buttons mirror that you can hang clothes behind, Charli is a little unhappy because I have usurped this functionality. So I am designing a companion to the mirror that meets this functionality. Stay tuned to the blog and if you do not want to miss it leave me your email here and I will notify you: Suscribe. I'll see you soon. Soon.
