Flash drive walmart 32gb

USB sticks may seem like an old story, but they're cheaper than ever, smaller than ever and faster than ever. This week we are curious to know which ones you think are best for toning these files around you need, but don't trust the cloud. We see a lot of storage offers these days, and often there are some very nice USB 3.0 flash drives among them. Some of them are almost indestructible, and can go anywhere. Others are super-tiny and can fit in your wallet. Others have the shape of keys, or have another amazing trick up their sleeve. What do you think are the best? Let us know in the discussions below. Let's hear your vote in the discussions below! To vote, follow these guidelines: follow this format for your vote, including bold printing. If you don't, it won't be counted: A PHOTO OR A BEST USB 3.0 FLASH DRIVEVote: [BEST USB 3.0 FLASH DRIVE] Why: Explain why these flash drives are the one you think is the best all around. Maybe you have one and you like it. Maybe it's super cheap, indestructible, super-portable, or just fast. Maybe it's packed with extra features. What makes it the one you would recommend to others, and why? Make your case! Don't duplicate the nominations! Instead, if someone named your choice, star (recommend) it to give it a boost, and respond with your story instead. Please do not let the non-entry, direct comments on this post. They're just going to get pushed down. Save your stories for other people's submissions! If you're not sure what we're hearing, just check out the nominations by our writers below. We'll give you a head start, and they should all be in the right format, so you can just follow our example. The Hive Five is our weekly series where you vote on your favorite apps and tools for any given job. Do you have a suggestion for a topic? Send us an e-mail to tips@hivefive@lifehacker.com!G/O Media can get a commission2-Pack: Juku STEAM Coding KitsPhoto by Simchen Lin. With the convenience of cloud storage, USB sticks may seem like old news, but the best ones are portable, fast, almost indestructible, and offer tons of space, enough to be worth reaching. This week we are looking for five of the best, based on your nominations. Earlier in the week, we asked you to tell us which USB 3.0 flash drives The best. Maybe they were super tiny and portable, but packed huge storage for files that are just too big for cloud storage. Maybe you just transported them to access important files on the issue that you don't trust the cloud with. Maybe they were just super cheap and had cool features like regular and mini USB ports. USB sticks may seem like an old story, but they're cheaper than ever, smaller than ever.... Read moreWe have tons of nominees, but as always, we only have room for the top five (so make sure you get back to the call for contenders to see more options!) they are, in no particular order: Kingston Digital 64GB Data Traveler USB 3.0 Flash DriveG/O Media can get a commission2-Pack: Juku STEAM Coding KitsKingston Digital Data Traveler line usb 3.0 flash drives are affordable, high capacity, and totally portable. The photo above tells the story, too. The all-aluminum case makes it just durable enough to go on a keyring and stand up to the drops and bumps your keychain might take, but it's small enough to fit smoothly in a USB port anywhere without blocking adjacent ports. It's compatible fast and upside down, thanks to the requirement that all our competitors be USB 3.0, and it even comes with a five-year warranty. The model above is the Kingston 64GB version, which will give you a \$30 drop at Amazon. If you prefer, you can enter 32GB or 16GB versions of Amazon for a little less, or go straight to Kingston to buy their 128GB version, all in the same form factor, of course. G/O Media can get a commission of \$132190 purchased by readersThe you who named the Kingston Data Traveler praised its form factor and portability, and particularly liked the form and form factor. Many of you said you kept yours on a keyring, others said you just liked the size it was for the amount of storage it offered. You universally liked the aluminum case, saying that you have broken or damaged so many cheap plastic drives over the years that it was refreshing to have a drive that lasted for years without breaking. You can read more personal stories and praise in his nomination thread here. SanDisk Extreme 64GB USB 3.0 Flash DriveSanDisk makes some great SD cards, but they also make some of the fastest USB 3.0 flash drives on the market. The 64GB SanDisk Extreme USB 3.0 flash drive (see above) displays transfer speeds of 245 MB/s read and 190 MB/s of writing; pretty quick, even compared to some of the other SanDisk readers (and more about it later.) The drive is on the big side, and certainly a stick that you'll want to keep in a bag until you need it plugged in, but the retractable USB port ensures it's never damaged and kept safe for when you need to use the drive. If you're interested, the 64GB version costs \$35 at Amazon, with 32GB and 16GB versions available for a little less. G/O Media can get a commissionThose from you who named the SanDisk Extreme praised its super high transfer speeds, and its retractable USB socket, both to keep the port safe and to Debris while you carry the drive, but also to be a little fun fidget when you have nothing else to do with your hands. Plus, getting these transfer speeds for that price is a welcome thing, especially when you have a lot of data to get around. A few of you have noticed that you are using yours as a USB installation drive, which is an ideal use case for when this added speed can actually make a difference. Some of you have noted it's a little bigger than a lot of readers these days though, so it's easy to break if you're not careful, and it might not be for you if you're rough on your readers. You can find out more in his nomination thread here, or this thread here. PNY Turbo 64GB USB 3.0 Flash DrivePNY is well known for affordable storage and memory, and their USB 3.0 flash drives are no exception. PNY Turbo USB 3.0 line flash drives are portable and tiny, easily stored in a pocket or anywhere in a laptop bag, boast solid and fast transfer rates, and come in sizes large enough to carry just about anything you might need. We highlight the 64GB version above, which will make you drop by only \$20 on Amazon. In reality, it's the \$30 128GB version that turned out in the nominations thread, which should highlight exactly how competitive the price these little things really are. There aren't many bells and whistles here though, which is how the price stays down. It's a simple and affordable storage in a plastic case with a cap to keep the USB socket clean while you carry it with you. Anyway though, if you need cheap storage, this is the way to go. If you're not interested in the 64GB version of the 128GB version, there are cheaper 16GB and 32GB versions, and a massive 256GB version for a pretty impressive \$73 dollars. G/O Media can get a commission \$102652 purchased by readersThose of you who named the Turbo PNY pointed out that it is difficult to beat storage as cheap, even when it comes with warnings sometimes- some of you have mentioned that these readers have failed you in the past, with apparently random disconnections and other issues. Others have said that you have had yours for centuries without problems or problems. Some of you have noted that this has so far been your first and only 3.0 USB drive, and you are satisfied with the transfer speeds and form factor, it has all the space of an external drive without any space. Many of you have pointed out that you have often seen these on sale via Kinja Deals, and that's how you pick them up so affordable. Anyway, you can read all these experiences, good and bad, in his nomination thread here. Corsair Flash Voyager Go 64GB OTG Flash DriveIf you're looking for a 3.0 flash USB player that works well with your computer, whether it's a Mac or a PC, and with your Android phone or tablet, the Voyager Go Corsair is a great option. You get 64GB in a tiny package and with an aluminum case and a transport strap that can connect to your keychain, or is small enough to fit just about anywhere you need to take it. After all, the thing is only about 37mm long. It can also switch from USB 3.0 port to USB microphone, so any Android device that supports OTG (On-The-Go) will work with it and see it as additional storage. Better yet, cross-compatibility between desktop computers (and desktop operating systems) and mobile devices, storage, storage. Portability won't cost you more money, it's only about \$30 at Amazon. If you don't need that much space, you can save a few dollars with the 32GB of 16GB versions. Hell, the whole thing even comes with extra caps in case you lose the included. That's a good idea. G/O Media can get a commissionThose from you who named the Voyager Go congratulated it for offering USB 3.0 and microUSB in the same round, being small enough to slip into your everyday carrier bag or attach to your keychain, and to offer features that you simply can't get on other drives without jacking the price to get it. You congratulated him for not requiring drivers or apps or something like that to work on your desktop or your smartphone or tablet. In fact, none of you even mentioned the drawbacks. You can check out the nomination thread here. SanDisk Ultra Fit 64GB USB 3.0 Flash DriveFor the pinnacle of portability - the kind I remember seeing mock-ups from on technology blogs years ago wondering if flash drives could ever get that small, -the SanDisk Ultra Fit is an amazing option. So small that it barely comes out of the USB stick in which you plug it (its size is similar to the Logitech unifying receiver, if you're more familiar with it), the Ultra Fit comes in a variety of storage options, none of which changes the basic form factor. The 64GB version shown above is just \$23 at Amazon, while the more massive (and more popular) 128GB version is only \$44. All models are USB 3.0 and boast high transfer speeds, carry a five-year warranty, and even come up with a small protective cap to keep the USB socket clean when not in use. G/O Media can get a commissionThose from you who named the line ultra fit readers pointed out that the profile is so low and these drives are so small that many of you just leave them in your laptops and computers for extra storage at the price of a USB port. It's quite small, you don't even have to take the drive when you pack your laptop to travel. Some of you have noted that they can be difficult to remove though, especially when flushing against a USB port because there is nowhere to really grab them, so to speak, and others of you have noted that while USB 3.0 speeds were great, if you use this in a USB 2.0 port, it's unfortunately slow. Others have noticed that these things are getting super hot for their size, so consider that too. You can read everything at this in his nomination thread here. Now that you've seen the top five, it's time to put them to a vote all azidés to decide the favorite Lifehacker community: Honorable mentions This week's honorable mention goes to Corsair Survivor, an almost indestructible flash drive that will make you back \$50 for the 64GB model on Amazon, but mostly because you could run on this thing with a truck or drop it from ridiculous heights and it won't would not only survive, but work perfectly. These advice things Aircraft-grade aluminum casings, a waterproof seal, shock-resistant and bumper cases, and all supported by a five-year warranty. If sustainability is your main concern, this is the drive for you, it is fast and durable. You can read more testimonials in his nomination thread here. G/O Media can get a \$28 commissionWe also want to highlight the SanDisk Ultra USB 3.0 OTG Flash Drive as our second honorable mention, which is SanDisk's dual port offer to compare with the Corsair Voyager Go in the top five above. The 64GB version is \$23 at Amazon, and while it's not as durable and robust, it still offers two USB 3.0 and micro USB ports to connect to your desktop and Android smartphone or tablet. Plus, it's still small enough to go anywhere, protects jacks when not in use, and even has a small slot on the center ring that goes around the body to attach to a keyring or thong for storage. You can read his nomination thread here. G/O Media can get a commission \$111893 bought by readersWiz something to say about one of the contenders? Want to make the case for your personal favorite, even if it wasn't included in the list? Remember, the top five are based on your most popular nominations from the thread call for nominations earlier in the week. Don't just complain about the top five, let us know what your preferred alternative is and make your point of view for it in the discussions below. The Hive Five is based on reader nominations. As with most Hive Five positions, if your favorite was left out, he did not receive the required appointments in the job call for nominations to make the top five. We understand that this is a bit of a popularity contest. Do you have a suggestion for Hive 5? Send us an email tips@hivefive@lifehacker.com!
