Anderson Valley Tasting Room Located on Hwy 128 to the west of Philo; 707.895.2152. Over the years, the New School of Social Research, now formally named New School, became a city university divided into private, non-profit academic schools and colleges: The Parsons School of Design Eugene Lang College of Liberal Arts College Performing Arts Performing Arts The New School of Social Research Milano School of International Affairs, Management and Urban Policy School media studies Sai, offered by the New School at first reflected the founders' interest in new social sciences, international affairs, history, philosophy, drama and literature, writing, performing arts, fine arts, foreign languages, media studies and information processing. Several of the schools offer to fully online programs that lead to certificates, associate degrees, and bachelor's degrees. WITH about the real world It's not easy to be a home educator, especially if you've still got to work. That's why Google makes it easier for kids to learn by combining parts of the classroom at home with their AR tools, which are now directly available on Google Search. See life-sized human skeletons, explore the muscular system, or carry apart larger-than-life animal cells, all without leaving their living room. One of the biggest expenses for many middle class families is the school cost to their children. Many parents pay thousands of dollars each year to send their children to private schools – especially those living in areas where public schools are of poor quality. A 2014 comparison with real estate, which Trulia found in postcodes with the highest rated public schools, only 4% of children go to private schools, compared with 19% of children in postal codes with low-rated public schools. However, this does not mean that parents who live in good school districts spend less overall. Homes in these high-performance school districts typically cost much more than other homes in the same area – 32% more, according to a Trulia study. So for many families, the additional cost of housing increases up to more than what they would have paid for private school. This means that parents who want the best possible education for their children find it difficult to choose: pay directly for private school or indirectly pay for homes close to a good public school. To find out what's best, they need to know how many of these two costs compare, and what options they have to keep the cost down. Cost private school According to figures from the National Center for Education Statistics (NCES), about 4.5 million were enrolled in private schools between 2011 and 2012. More than 80% of these students were in schools with a kind of religious affiliation. About 43% were Catholic schools, and another 37% went to schools identified as common Christians, Jews or special Christian names. Some 68% of all private schools have a religious orientation, while 32% are slow. On average, the cost of private school tuition for the 2011-2012 school year was \$10,740 per child, according to NCES. This is a significant burden for the middle class family. According to the U.S. Census Bureau, in 2014, the average household income of the U.S. population was \$53,657. This means that a family that generates an average income would have to spend around 20% of their income to send only one child to private school and 40% to two children. However, tuition costs vary considerably depending on the type of school. The average tuition cost was \$6,890 per year for Catholic schools, \$8,690 for other religious schools, and a whopping \$21,510 for nonsectarian schools. So a middle-income family would pay less than 13% of their income to send a child to a Catholic school, but more than 40% for a nonreligious school. The cost of a public school cost for a private school is easy to identify – just a fixed number of dollars a year. Calculating the cost of a public school is much more complicated. You need to know which neighborhoods parents choose in their schools, how much it costs to live in these neighborhoods, and how these costs compare to the cost of living in other, nearby neighborhoods. A good place to start is with Niche, a website that rates and compares U.S. school districts based on factors such as student test scores, graduation rates, health and safety ratings, and feedback from parents and students. Each year, Niche lists 10 school districts at its rates as the best in America. In 2016, the niche list is the number one school district in the Tredyffrin-Easttown school district. Centered in Tredyffrin Township, Pennsylvania – a suburb of Philadelphia – this district earns-plus ratings for its academic performance, teachers, extracurricular activities, and more. According to Trulia, the average sales price for homes in the area is \$532,500. This adds up to a monthly mortgage payment of about \$2,610 based on a 30-year loan, a 20% pre-volume, and an interest rate of 4%. For a buyer who can afford only a down payment of 10%, the monthly payment jumps to \$3,072. In nearby Paoli, on the contrary, Trulia says the average house price is only \$287,000, or \$1,407 per month. That's the difference of \$14,436 a year – 34% more than the average cost of private school tuition per child. So a family with one child could spend less, living in Paoli and sending the child to private school. However, a family with two or children could spend less by living in Tredyffrin Township, where the extra money paid for housing would cover school costs for all their children. A similar conclusion is reached in a 2014 article on school cost of cash-blowers. It compares the cost of a private versus public school for two bogus families living in eastern Massachusetts: One family spends \$2,120 a month on an average priced home in the village of Auburndale, which has some of the best public schools in the country; others spend \$998 a month on houses in the neighborhood with middle school, as well as an average \$782 per month for private school tuition. Adding these two costs together, private education families come forward with \$340 a month. However, mathematics changes completely when both families have two children. In that case, public education families save a total of \$70,000 over the course of both years of their children's school. Keeping school costs under control overall, it seems that public schools — even in expensive neighborhoods — are a better deal for families with multiple children, while private schools tend to be of better value only to children. However, this provision does not apply to all. Parents who choose the right private school can bring tuition costs up to an acceptable level, even with multiple children at school at once. And, on the contrary, making a smart choice about housing can make living in a large school district an affordable choice, even with only one child. Private School Options One way to make private schools more affordable is to choose a school with lower tuition. As mentioned above, religious schools – especially Catholic ones – tend to be much more accessible than nonsectarian private schools. Based on NCES figures, the family would send two children to a Catholic school at an average cost of \$13,780 per year. That's a little less than the extra \$14,436 a year it pays to live in Tredyffrin Township instead of Paoli. Another private school option is the Montessori School. These schools take an educational approach that focuses on letting children learn at their own pace through all five senses. Most Montessori programs are for younger children, but some expand into early adolescence. According to a 2009 survey by the North American Montessori Teachers Association, the annual cost of the Montessori school varies widely, while the average price for elementary school students is about \$8,600. This makes Montessori schools more expensive than a typical Catholic school, but on par with other religious schools. Parents can also save money by starting their children in public primary school, then transferring them to a private high school. According to the Money article, if their hypothetical private education family did it with two children, they would end up saving a total of \$71,000 compared to the family pricey school district. Private School Scholarships For families who have difficulty affording private school tuition can sometimes give it to their financial reach with scholarships and other forms of financial assistance. Some schools have their own financial assistance programmes, while others participate in national, regional or national scholarship programmes. The sources of funding are: Children's Scholarship Fund. Originally started as the Washington Scholarship Fund, the Children's Scholarship Fund (CSF) now provides partial tuition grants to low-income families across the nation. Scholarships cover up to 75% of tuition costs, with an average amount approaching \$1,700 per child. They can be used in any type of school - religious, secular, or even home education. To qualify for scholarships, families must meet to have a child in primary school and comply with the national school lunch program income guidelines. In 2015-2016, the Foundation provided scholarships to more than 24,000 students. To apply for a scholarship, parents must contact one of the CSF partner programmes in 16 countries; the time it takes depends on the program. Young scientists program. Run by the Jack Kent Cooke Foundation, the Young Scholars Program provides scholarships for high school and high school students with top-notch grades. About 60 students receive scholarships each year, which they can use to teach at school, day school or parochial (religious) school. In addition to financial support, young students receive academic advice, access to specific enrichment programmes and other resources. Families with incomes of up to \$95,000 can be applied, but most Young Scientists come from families with incomes below \$60,000. The application period runs from January to April, and students know until September whether they are qualified for support. More chances. This program focuses on students of color grades 4-9 who receive good overall grades and operate out-of-school activities. The program does not actually provide scholarship funding, but it does apply to qualified students in more than 300 high schools and high schools across the country – both religious and secular – and helps them apply for financial support from these schools. Better prospects say most students who apply through their program get financial support, but it doesn't give a special percentage. The application process starts in February for the school year, which starts 18 months later. There are many other scholarship and school voucher programs that operate in specific countries or regions of the country. Parents can learn about programs in their area through the Private Schools website. Affordable Home Near Best Public Schools In general, neighborhoods with large public schools are more expensive than other neighborhoods in the same general area. There are some exceptions to this provision. Neighborhood Scout has compiled a list of neighborhoods in the state's 20 largest metropolitan areas that combine good schools with affordable home prices. For each neighborhood, the site lists the average house price and the school district's rating on a 100-point scale based on factors such as class size and national test scores. For the 10 largest metro areas in the U.S., the top neighborhoods are: Metro Area Neighborhood Median House Value Public School Rating New York, NY Queens, NY \$234,924 92 Los Angeles, CA Los Alamitos, CA \$411,225 87 Chicago, IL Elmhurst, IL \$260,105 86 Dallas, TX Richardson, TX \$259,597 90 Philadelphia, PA Narberth, PA \$274,086 96 Houston, TX Friendswood, TX 218,832 94 Washington, DC Laurel, MD \$279,307 88 Miami, FL Hallandale Beach, FL \$184,819 52 Atlanta, GA Fayetteville, GA \$202,980 65 Boston, MA Brookline, MA \$390,447 98 If the area you live in — or want to live in — is not part of a large metropolitan area, Neighborhood Scout can still help you find affordable areas with good schools. You can enter your country and region sites in an advanced search engine, then select your criteria for school quality, pricing and other features that are important to you, such as crime rate or walkability. However, to use this feature, you need to subscribe to a site that costs \$40 per month, \$90 per quarter, or \$192 per year. Another way to afford a home in a top-ranked school district is to consciously choose to live in a smaller house. In Tredyffrin Township, PA, for example, Zillow lists a three-bedroom home for as little as \$390,000. Mortgage payments for a house like this could come in at about \$1,912 per month – a saving of \$698 per month, or \$8,376 a year compared to the average house price. Final Word Choosing a place to live, the school district is not the only factor to consider. For starters, you'll want to find a home that's close to your workplace, so you don't have to face a long commute every day – perhaps even one that's close enough for you to walk or bike to work. Ideally, you would also like to be close to friends and family. And finally, you want to live in a neighborhood that is comfortable for you, with access to all the amenities you care about – from local businesses to a good public library. So if the neighborhood that you love best isn't the one with the best schools, don't give up on it. Instead, crunch some numbers and see how much you could save by combining affordable homes with private schools. Or, on the other hand, if the place you're in love with is a large school district and sky-high housing prices, look for ways to find affordable homes in the neighborhood. Did you go to a public school or a private school? Which one would you choose for your children? Children?
