Nano sim to micro sim adapter template

Many people, including ourselves, have ordered the iPhone 5 of the online Apple store to avoid the insane crowds and long waits. But the new iPhone uses the new Nano-SIM cards so unfortunately it would mean going into the crowd to get one anyway. Something we would like to avoid so we've put together a guide to trim an existing Micro-SIM or Mini-SIM to a Nano-SIM. Check out this printable nano-SIM cutting guide that will help you cut down your standard SIM or micro-SIM to a nano-SIM for the iPhone 5. The guide was created by Christian von der Ropp and can be downloaded here. After you cut down your SIM, you might want to get a nano-SIM to micro-SIM or nano-SIM to standard SIM card adapter. This is for those who are techno rebels who are not phased by declaring your device warranty negligent. There's a real risk that you can damage the SIM card and aggravate the iPhone. GoSoftWorks assumes no responsibility for damage to the iPhone or SIM card. Do it at your own risk and for its excitement. nanosimltr.pdf - Cutting guide for Letter size paper nanosima4 .pdf - Cutting guide for A4 size paper When printing the guides make sure the printing options are set to press the actual size. You can measure the rulers printed on the directory to ensure it is printed to the correct size. SIM cards believe it or don't come in 4 sizes. SIM Card - No more use; about the size of a credit card. Mini-SIM Card – Most commonly in the previous generation, this is what most people would call a SIM card. Micro SIM Card – The now Standard for Smartphones; much smaller; about contains the contacts on the back. Nano-SIM Map - I've only seen it used so far in Apple iPhones, but I'm sure it will catch on; it's literally just the contacts. No matter what size, I think most of you will have the Mini SIM Card and will want to cut it down to a micro-SIM card, but a Nano SIM is also possible. It's a link to a page from a UK mobile network that gives you the guide on how to cut your SIM to size. Obviously you're careful when cutting, you'll want to follow the guide exactly. You'll see the actual memory of the SIM card is nowhere near the edges, but is only in the middle, so there's little to no danger of cutting that, but just be careful not me or the template folder is responsible for what you do to your SIM. Stuck with a smaller-SIM card and should switch to a phone that uses the larger (normal) version? Like a lot of people I recently put into an order for a new iPhone that's a few weeks away from delivery, and in simultaneously managed to sell the existing parent-generation iPhone. What to use in the meantime? I fished an older Android phone from one of the storage drawers but had a problem - it uses a 'normal' size SIM card. The size difference is shown below. There were two options. First, to buy a commercially available as shown in the image below. Or second, maybe much more fun and challenging - making my own. I took on the challenge because I didn't have the time to wait for a purchased version to come in. The following ingredients are necessary: Correct measurements template for each of the SOEs - take a PDF printout of the useful ones at nanosim-adapter.com A material of the same thickness as a SIM card to make the adaptor some thick card – example: discarded garment tags, or in my case, a sock pack cover. Tool scissors, basic cellotape, a little adhesive steps: Take a printout of the earlier-named PDF sheet (A4 size). Make sure that in the printing preferences you don't downsize the document, or pass-to-page, or pass-to-margins. Cut out the full SIM form on the page, and Glue it to a suitable card material (For me, it was a sock packet :). Be sure to use very little, minimum adhesive. You don't want it leaking into your phone. Cut the card to the regular SIM form Carefully cut out the hole for the nano-SIM. Make sure the actual nano-SIM card fits into the hole on the map. Turn the card template and nano-SIM together on the non-contacts side, and put cellotape over the back. Trim off any extra card or cellotape. Your nano-SIM adapter is ready to put in your phone to test it out. If you got it right, it should work the way it did for me (see below)! Cost = \$0. Mobile phone using SIM adaptor that has full reception Note: The site called also offers options of converting a regular-SIM to nano/micro-SIM, which is likely a DIY destructive process. Also to turn micro-SIM into regular-SIM, which is similar to steps above. Check out this printable nano-SIM cutting guide that will help you get your standard SIM or micro-SIM truncated down to a nano-SIM for the iPhone 5.The guide was created by Christian von der Ropp and can be downloaded here. After you cut down your SIM, you might want to get a nano-SIM to micro-SIM or nano-SIM to standard SIM card adapter. [via pimsxk] In situations where your SIM card is too big for the phone, you need a cutting guide. In this post, you can download a free printable directory. If you have a contract and upgrade your phone, you could end up with a model that uses a smaller SIM and therefore you might want to cut off the plastic in size. Or you can buy an unlocked phone and realize the SIM you want to insert into it is too big. The point is that you probably want to keep using the same mobile number in different phones. A PAC code request or SIM exchange might be the answer, but if it isn't, the PDF download anger on this page can help. First, a word about the different sizes. The 3 sizes The SEMs come in three different sizes: Standard, Micro and Nano. The standard size is sometimes referred to as a Mini SIM, which seems odd given it is the largest its type. Mini SIM (2FF) Length: mm Width: 15.00 mm Height: 0.76 mm Micro SIM (3FF) Length: 15.00 mm Width: 12.00 mm Height: 0.76 mm Nano SIM (4FF) Length: 12.30 mm Width: 8.80 mm Height: 0.67 mm Hack Your SIM Size in 5 Steps The following guide is intended for anyone who wants to reduce the size of their standard SIM card to a micro or Nano size. It didn't take me long to cut off a SIM I used as my business contact number. The iPhone 4S I purchased online requires a micro (3FF) size. I use this guide to put my old SIM in the iPhone 4S. I laughed and rubbed my hands together. 1.) Download PDF and press it for sure that you print it as 100%. It is created by GiffGaff, but the principle applies to any SIM. DOWNLOAD PDF GUIDE 2) Loose SIM Safe on Page To keep the SIM in its place, I found it best to use double-sided cellotape or another double-sided self-destructive. If you want to try a small amount of blu-tack, make sure to press the plastic card firmly on the paper. Don't try to pull a MacGyver - bubble gum doesn't work in real life! 3) Use Pencil & Ruler to draw guidelines It is important to fix the SIM on the paper directory because you need to draw pencil lines on the plastic using a ruler. 4) Use knife or scissors to cut plastic once you have pulled the pencil lines, use a ruler and sharp knife to record lines as a pilot guide. Alternatively, use strong scissors (kitchen scissors are good) to cut along the pencil lines. Be very careful not to take too much off, otherwise you won't be SIM a snug fit in the phone. 5) Using Sandpaper to finish sides When cutting the plastic, I've fisted on the side of caution by not taking too much off. I finished the edges with sandpaper to submit the plastic. SIM Cut Video Guide There is a good video guide here if you want to watch someone else go through the process first. It's little scary tampering with the plastic first time because it's alarming to think of what might go wrong. Watch video on YouTube Upsizing the SIM The error in this blog post is that it assumes you want to make your SIM smaller. This is a problem if you decide to abandon Apple and head over to Google Android, which means possibly moving up a notch from a Nano SIM to a Micro SIM. In this case, you may have no choice but to request your carrier's PAC (Porting Authorization Code) and make a transfer. (You don't need the PAC code if you stay on the same network – you usually only do a SIM swap.) Pre Cut SIMs My provider, GiffGaff provides the three different size SIM cards, so if you upgrade your phone to a model that requires a smaller size, as long as you don't move to another network, it's not necessary to request the PAC code. The Other Thing they do is provide the Micro Sim (3FF) cutting fore and being charged inside the Standard SIM (2FF) in a fashion that doesn't differ to Airfix models. It's easy to the Micro-size from the standard size outer plastic. If you want to put it back together, it's easy snap back together. If it is loose, use super glue. GiffGaff helps keep your number Asking your current network provider for a PAC code. Learn more here. Unlock your phone If your phone is locked to another network, you must unlock it. Get support online We have a host of members and agents, ready to provide you with our super-speedy (24/7/365) online support. It starts here. Join the poisongaff community Buy a Micro SIM Cutter If you don't fancy cutting your precious SIM with a knife and ruler, consider purchasing a dedicated micro SIM mower. (Affiliate Link) Now I have to be honest and say I haven't used any of this myself (at least not yet) so I can't speak for the results they give. I am merely pointing it out as an option for those of us who dare not waive their SIM using the DIY method. Find out which SIM card your iPhone or iPad uses Are you an Apple user? I am, and the following link is useful in identifying what size SIM your device is using. hope that they continue to update the page with their latest models with information about the SIM size. Size.
