Texas plumbing supply schertz tx

Schertz receives his water from the Carrizo aquifer, not through the Edwards Aquifer Authority. The carrizo aquifer is not under restrictions of stage 1, 2, 3 or 4. Schertz promotes a year-round water conservation plan, the rules are as follows: Irrigation of outdoor sprinklers throughout the year is prohibited between 10 a.m. to 8 p.m. every day. The use of a hand hose or other hand irrigation device or drip irrigation system can be used at any time. It will be a violation if a person or customer allows water to escape into a non-permeable ditch, or cannot repair a controllable leak. Water reuse is exempt from the water conservation plan. Customers using water from a private water well must meet all water conservation plan requirements. All people are urged not to waste water. As this dry season continues, be prepared for restrictions. Be cautious about water. WHEN DOES THE WATER PRESSURE TOO HIGH OR TOO COME DOWN? The Schertz City Department of Water is regulated by the Texas Environmental Quality Commission (TCEQ). TCEQ rules state that the system must be designed to maintain a minimum pressure of 35 psi at all points within the distribution network at flow rates of at least 1.5 gallons per minute per connection. The deviation in elevation along Schertz's water service area makes it impossible to maintain a constant pressure zone for our customers. Higher elevations will tend to have lower water pressures and lower elevations to higher pressures. The Schertz water system is designed to provide a minimum flow of 750 gpm of fire hydrant and ensure that we meet minimum water pressure requirements. It is important to know that the Texas/Schertz plumbing/construction code requires a pressure reducing valve to be installed when pressures in the residence exceed 80 psi. Although the working pressures of plumbing and household appliances exceed 80psi, some insurance companies will not cover any damage or replacement of a device if this situation exists. It is important that you know what your insurance provider requires/will cover. If you have any questions about water pressures in Schertz, please contact the Schertz Department of Water at 210-619-1800. To find out what your insurance companies' rules are about damage coverage or replacement of an appliance, you should contact them directly. If you experience unexpected water loss or a line break, we will consider an adjustment to your bill after repairs have been made. Complete the Leak Adjustment Request Form (PDF). Pool discharges are generally not allowed unless it is dechlorinated to less than 1 ppm of chlorine or unloaded through the courtyard of the property in which it is located, and does not cross the adjacent property. Notice will be provided to the Department of Public Works (210-619-1800) at least one business day in advance.
