Hartell condensate pump kt-15-1ul

The capacitors in Hartell are produced at a rate of up to gallon per hour by a residential central air conditioning unit or gas condensation furnace. The installer will feed the capacitors of draining the devices at one of the pump entrance ports. Hartell capacitor pumps are equipped for communication with 3/8 plastic pipe ID. The pipe is connected to the pump inspection valve, resulting in a drain line, swamp, French drain or washing sink. Lifting or head of the pump indicates the height of the pump required to lift the water until draining. The distance that water needs to travel horizontally once you achieve the elevator is referred to as running. Running does not affect the pump lift rate or flow unless it exceeds 50 feet. Runs of 50' or more will reduce pump output by about 10%. Hartell capacitor pumps are ideal for use as sewage pumps for ice makers, beverage dispensers, drinking fountains, water coolers and dehumidifiers. The Help Security Switch (in the Accessories section) Hartell strongly recommends that all installations have an additional wired security key correctly. The auxiliary safety key will turn off the device in case of pump overflow that can lead to property damage. The pump capacity can be caused by a dead-end discharge line, power loss of the pump, or pump failure. The adapter can be wired in line with heat to turn off the device; or wired directly to the alarm. Best KT-15-1UL Hartell Capacitor Pump for Air Conditioners or 15' Gas Ovens Lift for Your Favorite.
