Descriptive inorganic chemistry 6th edition pdf download

PDF 2014 – ISBN-10: 1464125570 – Descriptive inorganic chemistry (6th edition) By Geoff Rayner-Canham, Tina Overton #6974 2014 | | 720 pages | PDF | 15 MB H. Freeman and Macmillan Higher Education Company Geoff Rayner-Canham Grenfell Campus, Memorial University Corner Brook, Newfoundland, Canada Tina Overton University of Hull, UK This text introduces descriptive inorganic chemistry in a less mathematical way, using a periodic table in context to study chemical properties and discover the connections between elements of different groups. The sixth edition offers new learning tools, expanded coverage for biological applications and new help in solving problems. CHAPTER 41 Atomic electronic structure: Chapter A 2 Structure of periodic table 19 CHAPTER 3 Covalent bonding and molecular spectroscopy 41 Chapter 41 Periodic patterns 211 CHAPTER 10 Hydrogen 11 Group 1 Elements: Alkaline metals 243 CHAPTER 12 2. : Chalcogens 428 CHAPTER 17 Elements: Halogens e-ool 473 CHAPTER 18 Group 18 Elements: Nobility gases 507 CHAPTER 19 Transition Metal Complexes 519 CHAPTER 519 20 3D Transition Metals 559 CHAPTER21 4d and 5d Transition Metals 607 22 Group 12 Elements 633 CHAPTER 23 Metal metal chemistry 645 CHAPTER 24 Rare, Soil Actinoid and full contents CHAPTER 1 Atomic electronic structure: Overview 1 Context: Importance of Lanthanoids 1 1.1 A Overview of quantum model 2 1.2 Atomic orbitalforms4 1.3 Polyelectronic atom 8 1.4 Ion Electron Confi gurations 13 1.5 Magnetic properties of atoms 15 CHAPTER 2 Structure of the periodic table 19 Context : Bioorganic chemistry 19 2.1. Organisation of a modern periodic table 20 2.2 Presence of elements 23 2.3 Stability of elements and their isotopes 24 2.4 Classifications of elements 28 2.5 Periodic characteristics: Atomic Radius 31 2.6 Periodic characteristics : Ionization energy 35 2.7 periodic characteristics: Electron Affi nity 37 CHAPTER 3 Covalent bonding and molecular spectroscopy 41 Context: Greenhouse effect 41 3.1 Lewis structures at a glance 42 3.2 Partial bond order 44 3.3 Official charge 4 4 3.4 Valence-Shell Electron-Pair Rejection Rules 45 3.5 Valence-Bond Concept 50 3.6 Introduction to molecular orbits 53 3.7 Molecular orbitals for period 1 Diatomical molecules 55 3.8 molecular orbitals 2 Diatomical molecules 57 3.9 Molecular orbitals for heteronucleic diatomical molecules 62 3.10 Network Covalents 64 3.11 Molecular Symmolecular 66 3.12 Molecular symmetry 70 3.13 Symmetry and vibration spectroscopy 76 3.14 Bonding Continuum 8 0 CHAPTER 4 Metallic bonding and alloys 85 Context: metal matrix composites 85 4.1 Metal ing 86 4.2 Bonding models 87 4.3 Metal structure 89 4.4 Unit cells 92 4.5 Alloys 93 4.6 Nanometallic particles 95 4.7 Magnetic properties of metals 95 CHAPTER 5 Ionic Bonding and solid discele structures 99 Context : Superconductivity and ion compounds 99 5.1 Ionic model and size Ions 100 5.2 Polarization and covalency 102 5.3 Ionic Structures 106 5. 4 Hydrated salts 113 5.5 Isostructured ion compounds 114 5.6 Perovskite 117 5.7 Spinels 118 5.8 Defects and non-sophoncing compounds 119 6 Why compounds exist– inorganic thermodynamics 125 Context : Against Convention: Ionic Compounds of Metal Ions 125 6.1 Thermodynamics of Formation of Compounds 236 6.2 Formation of ion compounds 134 6.3 Ion compounds 137 6.4 Thermodynamics of the ion compound solution process 139 6.5 Lattice energy and comparative Ion sizes; Charges 142 6.6 Formation of Covalent Compounds 144 6.7 Thermodynamic versus Kinetic Factors 146 7. : Green solvents for the future 153 7.1 Solvents 154 7.2 Brønsted-Lowry Acids 158 7.3 Trends in acid-base behavior 163 7.4 acid-based reactions oxides 168 7.5 Lewis Theory 170 7.6 Pearson Hard-Soft Acid-Base Concepts 171 7.7 Application HSAB Concept 173 7.8 Biological Aspects 1 CHAPTER 8 Oxidation and reduction 181 Context: Unraveling the secrets of nature 181 8.1 Redox Terminology 182 8.2 Oxidation number Rules 183 8.3 Determination of oxidation numbers from electron gas acidosis 184 8.4 Difference in oxidation number and official charge 186 8.5 Periodic variations Oxidation numbers 187 8.6 Redox Equations 188 8.7 Quantitative aspects of semi-reactions 192 8.8 Electrode potential thermodynamic functions 193 8.9 Latimer (reduction potential) Diagrams 195 8. 10 Frost (oxidation state) Diagrams 1 97 8.11 Pourbaix (EU-pH) Diagrams 200 8.12 Redox Synthesis 204 8.13 Biological aspects 206 Chapter 9 Periodic patterns 211 Context: Are the periodic table only for groups and periods? 211 9.1 Group Trends 212 9.2 Periodic Trends Bonding 215 9.3 Isoelectronic Series Covalent Compounds 219 9.4 Group and (n 1 10) Group Similarities 221 9.5 Diagonal Relationships 227 9.6 Knights' Move Relationship 22 9.7 Early actinoid Relationships Transition Metals 233 9.8 Lanthanoid Relations 233 9.9 Combo Elements 235 9.10 Biological Aspects 239 CHAPTER 10 Hydrogen 243 Context : Hydrogen Communication – Real Special Agent 243 10.1 Hydrogen Isotopes 244 Nuclear magnetic resonance246 10.3 hydrogen properties 247 10.4 Trihydrogenion 250 10.5 Hydrides 252 10.6 Water and hydrogen 256 10.7 chrysanthemums 257 10.8 Element Reaction flowchart 260 CHAPTER 11 Group 1 Elements: Al Calib metals 263 Context: balance of sodium ion potassium ions in living cells 263 11.1 Group trends 265 11.2 Characteristics of alkaline metal compounds 2 66 11.3 Trends in alkaline earth oxides 269 11.4 Solubility of alkali metal salts 271 11.5 Lithium 274 11.6 Sodium277 11.7 Sodium hydroxide 278 11.6 8 Sodium chloride 280 11.9 Sodium carbonate and sodium bicarbonate 280 11.10 Potassium 282 11.11 Potassium chloride 283 11.12 Ammonium ionion ion as ionion ion ion as pseudo-alkali-metallic ion 284 11.1.1.11 Potassium chloride 283 11.12 Ammonium ion 13 Biological aspects 285 11.14 Element Reaction Flowcharts 285 CHAPTER 12 Group 2 Elements: Alkaline earth metals 289 Context: calcium and magnesium– second biological balance 289 12.1 Group trends 291 12.2 Characteristics alkaline earth metal compounds 292 12.3 Trends alkaline earth Metal oxides 296 12.4 Beryllium 297 12.5 Magnesium 298 12.6 Calcium carbonate 300 12.7 Cement 302 12.8 Calcium chloride 303 12.9 Calcium sulphate 304 12.10 Calcium carbide 304 12.11 biological aspects 305 12.12 Element Reaction flowcharts 307 CHAPTER 13 Group 13 Elements 311 Context: Aluminium-Toxic Ion 311 13.1 Group Trends 312 13.2 Boor 313 13.3 Borides 315 13.4 Boranes 316 1 3.5 Boor Halides 320 13.6 Aluminium 322 13.7 Aluminium halides 327 13.8 Aluminium potassium sulphate 328 13.9.9 Aluminides 32 9 13.10 Biological aspects 330 13.11 Element reaction Flowchart 331 CHAPTER 14 Group 14 Elements 335 Context: Cermets – the most stringent materials 335 14.1 Group Trends 336 14.2 Carbon and silicon chemistry contrasts 337 14.3 Carbon 339 14.4 Carbon isotope 34 3 14.5 Carbid 344 14.6 Carbon monoxide 348 14.7 Carbon dioxide 350 14.8 Carbonates and bicarbonates 352 14.9 Carbon sulph des 354 14.1 0 Carbon halides 354 14.11 Methane 356 14.12 cyanides 357 14.13 Silicon 358 14.14 Silicon Dioxide 360 14.15 Silicates 362 14.16 Aluminosilicates 364 14.17 Silicones 367 x Content 14.1 8 Tin and Lead 368 14.19 Biological aspects 371 14.20 Element Reaction flowchart 374 CHAPTER 15 Group 15 Elements: Pnic togens 379 Context : Essential phosphorus- Oxygen bond 379 15.1 Group Trends 380 15.2 Nitrogen and phosphorus chemistry contrasts 381 15.3 Nitrogen Overview of chemistry 384 15.4 Nitrogen 386 15.5 Nitrogen Hydrides 387 15.6 Nitrogen ions 394 15.7 Ammonium Ion 396 15.8 Nitrogen oxides 397 15.9 Nitrogen 402 15.10 Nitrous oxides Acid and nitrites 402 15.11 Nitric acid and nitrates 403 15.12 Overview of phosphorus chemistry 407 15.13 Phosphorus408 15.14 Phosphine 411 15.15 Phosphorus oxides 411 15.16 Phosphorus chlorides 412 15.17 Phosphoroxoacids and phosphates 414 15.18 Pnictides 417 15.19 Biological 418 15.20 15,20 Reaction flowchart 421 CHAPTER 16 Group 16 Elements: Chalcogens 427 Context: Macular degeneration and Singlet Oxygen 427 16.1 Group Trends 428 16.2 Oxygen and sulphur chemistry contrasts 4 30 16.3 Oxygen allotropis 431 16.4 Oxygen and atmosphere 43 6 16.5 Covalent oxygen compounds 438 16.6 Oxide properties trends 4 40 16.7 Hydrogen oxides 442 16.8 Hydroxides 444 16.9 Sulphur allotropides 445 16.10 Overview of sulphur chemistry 446 16.16.10 11 Sul Hydrogeni de 450 16.12 Sulphur oxides 454 16.14 Sulfi d 457 16.15 Sulphuric acid 458 16.16 Sulphates and Hydrogen sulphates 460 16.17 Other oxosulfurean ananes 461 16.18 Sulphur halides 463 16.19 Sulphur-Nitrogen compounds 466 16.20 Selenium 466 1 66.21 Biological aspects 467 16.22 Element reaction Flowchart 468 CHAPTER 17 Group 17 Elements: Halogens 473 Context: Atmospheric experimentation – Antarctic ozone hole 473 17.1 Group Trends 475 17.2 Contrasts with Fluorine and other chemistry Halogens 476 17.3 Halides 478 17, 4 Fluoride 482 17,5 Hydrofluoride and hydroflic acid 484 17.6 Overview of chlorine chemistry 48 6 17,7 Chlorine 487 17,8 Hydrochloric acid 489 17,9 Chloroxide 489 17,10 Chlroxoydoacids and oxonic acids 491 17.11 Intersed halogenated compounds and polyhalide ions 495 17.12 Cyanide ion pseudo-halide ion Xi 17.13 Biological aspects 499 17.14 Element Reaction flowchart 502 CHAPTER 18 Group 18 Elements : Noble Gases 507 Context: Helium-increasingly rarer gas 507 18.1 Group Trends 508 18.2 Helium 510 18.3 Helium compounds, Argon, and Krypton 511 18.4 Xenon Fluorides 511 18.5 Xenon oxides 515 18.6 Other xenon compounds 516 18.7 biological aspects 516 18.8 Element reaction flow chart 517 CHAPTER 19 Transition Metal complexes 519 Context : Platinum complexes and cancer treatment 519 19.1 Transition Metals 521 19.2 Introduction to Transition Metal Complexes 522 19.3 Stereochemistry 523 19.4 Isomerism transitionl Metal Complexes 525 19.5 Appointment transition metal complexes 528 19.6 Overview bonding theories transition metal compounds 530 19.7 Crystal Field Theory 532 1 9.8 Success Crystal Field Theory 538 19.9 More Electronic Structure 542 19.10 Ligand Theory 546 19.11 Thermodynamic versus Kinetic Factors 5 48 19.12 Synthesis of coordination compounds 549 19.13 Reaction mechanisms 550 19.14 Coordination complexes and hard soft acid base concept (HSAB) Concept 554 19.15 Biological aspects 555 CHAPTER 20 3D transitional metals 559 Context : Iron is at the heart of Everything 559 20.1 Overview 3d Transition Metals 560 20.2 Group 4: Titanium 562 20.3 Vanadium-Chromium- Manganese Triad 563 20.4 Group 5: Vanadium 564 20.5 Group 6: Chromium 564 20.6 Group 7: Manganese 571 20.7 Iron cobalt-nickel triad 575 20.8 group 8: Iron 576 20.9 Group 9: cobalt 586 20.10 Group 10 : nickel 20.11 Grupp 11: Vask 592 20.12 Bioloogilised aspektid 598 20.13
