Web md giardia

The risk of getting Giardia infections in your pets is small. However, there are a few steps you can take to lower your risk. Giardia interstinalists (aka: Giardia duodenalis, Giardia Lamb) are a common lamb, microscopic (interstinct) parasites that often affect people, dogs, and 1.2 cats. Common signs and symptoms of Giardia infection (in both human and pets) are diarrhea, gas, abdominal unease, nausea, and vomiting. However, it is possible to be infected and have no signs or symptoms of 1.3.4 disease. Please visit our other web page for a more detailed description of Giardia, including its life cycles, prevention tips, and treatment information for people. The risk of getting Giardia infection to dogs or cats is small 4-7. The exact type of Giardia infected humans is usually not the same type that infect dogs and cats 5-7. Note: If you own other household or exotic pets, please contact your veterrinay. Looking for more information, as some rodents and other species can bring human tension to Giardia. Anything that comes in touch with fes (poor) from infected people or animals can become contaminated with the Giardia parasils. Humans and animals become infected when they swallow the parasit. It is not possible to become infected in contact with blood. Your dog or cat can be found infected by: When in touch with infected festive (poop) from another dog or cat Rolling and the contaminated body was contacted with a contaminated surface (for example, a dirty lith box or dog cage or trash) drinking water from a contaminated creek, ponder, or other body of young water pets , such as puppies and cooks, there is a higher risk of disease than adult dogs and cats. The risk of getting Giardia infections in your dog or cat is small. However, there are some steps you can take to minimize your exposure to Giardia if you have dogs or cats: Wear gloves when fields reduce the risk of coming in touch with infected spills (poor) or soil. The surface of the house regularly. Clean and disinfect areas that access your pets -- as well as items such as toys, beds, and water and food bowls -- regularly. Wash hands often and well: Wet your hands with clean, run water (hot or cold) and apply soap. Rub your hands together to make a pen and burst them well; be sure to rub the back of your hand, between your fingers, and under your nails. Continue to rub your hands for at least 20 seconds. Shrab your hands well underwater running. Dry your hand using a clean or dry towel when they are. Giardia is difficult to completely eliminate from the environment, but there are things you can do to reduce the risk of your pets' reactions and to human infections. Hard surfaces (for example: cement and floor tiles, tables, trash cans, etc.) Cleaning Insert gloves. Remove feces and toss from a plastic bag. and surface rubs using soap. Ulcer surface well until no obvious visible contamination is present. Disinfection Wear gloves. Disinfect according to manufacturing guidelines using one of the following: Product composite growth harmonium (QATS) 4, which are found in some cleaning products in the house; The active ingredient can be listed as dimethyl chlorist amonium alcohol. Bleach mixing with water (3/4 cups of copper in 1 gallon of water) 8 Follow product instructions, ensuring the product stays in touch with the surface for the recommended amount of time. Shrip and clean water. Carpet / Upholstered Furniture Cleaning Set Gloves. If feasting them on a rug or improving furniture, remove them with absorbent materials (for example, double terrain paper towels). Place and toss the fes into a plastic bag. Clean the contaminated area with regular detergent or carpet cleaning agents. Allow carpet or furniture to improve in completely dry. Disinfection Wear gloves. Steam clean the area at 158°F for 5 minutes or 212°F for 1 minute. Harmonium products amonium products (QATS) are found in some rug cleaning products and can also be used after disinfected cleaning. Read the product labels for specifications, and follow all the instructions. Other items (toys, clothes, pet beds, etc.) items in the house must be cleaned and disinfected daily while a dog or cat is being treated for Giardia infection. Dishwasher Dishwasher-safe toys and water and food bowls can be disinfected in a dishes with a sugar or a final ulcer beyond one of the following: 113°F for 20 minutes 122°F for 5 minutes 162°F for 1 minute If a cargo is not available, submerge flat-safe items to boil water for at least 1 minute (at elevations above 6,500 feet, boiled for 3 minutes). Washed with dry clothes, some pet items (for example, bed and toy cloth) and end fabric (bedding and towels) can wash in the washing machine and then heat-driven over the higher heat setting for 30 minutes. If a garment dryer is not available, allow the clothes to dry up under direct sunlight. Giardia is difficult to completely eliminate from the environment, but there are things you can do to help reduce the risk of pets to renfection and to human infections. Please note that despite your best efforts to clean up the environment, Giardia may persist in outdoor space and pet reinfection is possible 4. Wear gloves when touching feses. Remove the holidays promptly 4 and place them in a plastic bag. Limit access to common outdoor spaces, where possible, whether pets have diarrhea or being treated for Giardia. Eliminate any standing water source (for example, puddles, containers and water, and water sources that are not in use). Don't try to use cooking in your soil or area of your soil or track, as will be effective. Leave no new creatures, especially youth, enter the or other outdoor space until you are advised by your veterinarian. In the earth 8,9 in cold temperatures (around 4 °C / 39.2 °F), Giardia can survive for approximately 7 weeks (49 days). At room temperature (around 25°C/77°F), Giardia can survive for about 1 week (7 days). Dry surfaces moist or environmental in a crisp, hot environment that experiences direct sunlight, Giardia can survive for only a few days 8.9. In a humid, cool environment, Giardia can survive for up to several weeks. Water 10 At the water temperature below 10°C/50°F (for example, lak water or water is issued during winter, water fridge), Gadya can survive for 1-3 months. At water temperatures above 10°C/50°F (for example, river water during the autumn season, tap water, and puddles during the summer), Giardia can survive for less time than in cold temperatures. For example, in water above 37°C / 98.6°F, Giardia can survive less than 4 days. Clean and disinfect potentially contaminated items (toys, water bowls and food bowls, pet beds, floors, tailor, end fabric, towels, litter boxes, etc.) regularly for as long as your pet is sick. If your pets are taking medication, clean and disinfect often (every day if possible) until a few days after the recent dose of medication. Giardia survival depends on many factors, so we recommend that you consult your veterinarian for further advice. If you have other dogs or cats, be sure to tell your veterinarian even if they don't show signs of diarrhea. Other pets also have to be placed on medicine depending on the situation. Even animals showing no signs of Giardia infection could be infected with Giardia colors in the setting 4. Bathe all pets and pets shampooo after medical treatment to make sure no fecal residue is in the 11 pet clothes. Clean dogs and cats' settings, as described above, 11 (keep areas, floor,

garbage, etc.) and wash daily water bowls with soap and water. Limit your dog's access to processed water surfaces (creeks, ponds, lakes) to avoid re-infecting your animals and contaminate the water that could make other animals sick. If your pets are persistent diarrhea, seek veterinary care. Diarrhea has different causes and could result in dehydration or other serious complications. Diagnosis and treatment of Giardia infections must be done by a licensed veterinarian. No over-the-counter approval treatment is available for Giardia infections. Giardia may pass from feces intermittently, and a beast may appear healthy or without signs of disease before it stops passing through Giardia. Repeated fecal tests may be necessary. 4. Follow your veterinary recommendations, and take your pets to all follow-up appointments. The Merck Veterinary Manual.
