Home Forum &gt; Ammunition, Gear and Firearm Handling &gt; &gt; Help - Buzz Starter • #1 • September 12, 2015 Looking to buy a new up-to-date Shotshell reloading manual, I have a Lyman 4 version. A lot of options out there. BP has many different people who are listed in addition to the Lyman 5 addition. Mainly interested in .410, but I load 12 gauge slugs and 20 gauges for skeet. Quite honestly I'll go to the powder manufacturers' websites - there's more 'up to date' information, and you only need to look at the powder you want to use... · Websites of powder manufacturers. Lyman's books have never been in contact with the modern world. · Elliot loading data typically pairs the same manufacturer's hull and wads such that the data showing a REM hull with any primer other than a REM primer is sparse. The data in the Lyman Manual is more expansive than the data in the Elliot Data Guide. But Lyman's 5 vintages are 2007 and may not have data for powders such as the 20/28 and 300 MPs that have arrived on the market since. Lyman's 5th edition gives a decent set of instructions for a good amount of loads out there, including steel, heavy shots, and bimuths as well as slugs. I have BPI's manual, it's decent and has a ton of dishes, but I like to use Lyman whenever components change or do something different like steel. I would recommend Lyman on plain online recipes if you ever had questions about working with your re-loader or some traits you get with different types of recipes and columns/columns. BPI also has a ton of information and you can find ga. Specific load manuals can be ordered. An idea of what's in the context of your particular application in the context of your particular application without logging on to the computer Good to have a manual. Maybe I am Too old, but I like a hard copy on getting online every time. · - Since you already know how to load, you won't need that part of the book. You really just need data for different loads. Mostly I use Hodgdon.com loading information. They have Hogden, Winchester and IMR listings for a lot of different load combinations. I think it depends on the powder you're loading. I have some Lyman books, but I prefer the books of powder makers. I pick them up every year at the grand, free is good! Colonel - I also like online manufacturer Powder Web Sites. There's nothing wrong with Lyman's manual, I've printed every version ever. As stated above, the data is quite dated and many old loads are now deemed unsafe! Just my \$.02, Mark · In being all Lyman, reloading for shotguns with many others, I like RCB the best of more recent publications. The RCBS Shotshell Handbook has everything you want in the loading manual. I'm curious.... How often are reloading manuals updated?... I think all of the Shotshell books are between 5-9 years old? I would like to see a book with more variety on loading recipes... i.e.: more wad and primer combinations. For example.... In lyman manual they only have a recipe for components I am using and it is only a powder charge. · I There is a series of powder charges from minute to maximum and a load it lists is the pressure of 8800. Im guessing that there is a load that can be developed a little more even though I am no expert. I go to powder websites and download their data and print them and look at them in a book I refer to quickly but as already mentioned they sometimes have limited options on component selection. Reap · Lyman's 5th edition gives a decent set of instructions for a good amount of loads out there, including steel, heavy shots, and bimuths as well as slugs. I have BPI's manual, it's decent and has a ton of dishes, but I like to use Lyman whenever components change or do something different like steel. I would recommend Lyman on plain online recipes if you ever had questions about working with your re-loader or some traits you get with different types of recipes and columns/columns. BPI also has a ton of information and you can find ga. Specific load manuals can be ordered. It's good to have a manual to get an idea of what's in the context of your particular application in terms of your particular application without logging on to the computer. Maybe I'm getting too old, but I like a hard copy on getting online every time. Agreed, an easy to absorb a printed copy in the chair is very easy and highlight - I'm new to reloading shot shells, but Lyman reloading The new one is not a good book I also use one from Elliot since I use dots powder. I'll give an Elliot book just a request and they'll send you Free. Recipes websites on other powder sites hope it helps. Hodgden will send you a paper copy of their reloading manual if you call them. I have all the Lyman books and some others but the RCBS book is very good. I ordered my on-line. To put up queues.
