Among other lights and set a large number of brightness visual problems. Plus too much! This amazing world pixel style, the game picture of the treah mobile version and pc version and so on, using a very modern 2D pixel images. Modern image technology, such as soft light changes and so on. The most beautiful part of the game or different bifonipaheri is a different color, every time you walk in different baffonipaheri, you will notice clear changes in the picture: some sunshine, some black sift ingestion are forest. Similarly with different sounds in different environments, the game is true for music, but most of the time you should hear about the screen of this title and popular theme song background music everywhere. No matter when the game is very easy to resin and pleasant electronic head, which is the biggest feature of the game, the overall level of many sports will be much better, every capital can give people a deeper impression. Extremely high degree of freedom. The purpose is very easy, you revolve around paintings, build a broken house, live a comfortable life. You can also move to challenge boss, collect resources, kill the small owner, attract NPCs, build their own palace and village, ride on a brave sahask. In addition to acquisition and composition, the second feature of the game is the plasticity of the course, without any major lines, the development of the world completely free. There is snow and snow to the left, wide desert running to the right, the sky can destroy and build the whole world up to the island, to go to hell to cut through the earth, to put the sky tower to go to the island. The game is also divided into the world day and night, finally decided to make games by players how to make themselves themselves. You can find resources in different places to build your own empire, to synthesise your own equipment, equipment, furniture and other needs. Every inch of this game can be destroyed, unless you have free time, for you to dig the entire map into any tube in a pit. Bulky, with more and more of the game, resources need to find a more dangerous place. It has a great degree of freedom, but the main line is also very clear and brilliant game. The basic joke of the tiriya is naturally acquisition and texture. In the world of tiriya, almost everything you see can be broken, and as a material goes out. As long as the material and the situation are enough, at any time, anywhere Be taken over. And it does not seem that this is a medieval fantasy story, as game development, lasers, circuits, bombs and other high-tech can also be used. As to how to synthesise, it is the basic joke of the game, and constantly discover and create new things, to find everyone! Actually, the only fault of the mobile version is nothing that I think it does not shrink the content, but bad operation. Although the game was very vecharous lying, still can't solve how to insert objects or elements into the desired location, and also the full range of multi-angle good migration, it can also be set to jump buttons, this can be called the biggest failure on the operation. However, it can still be due to freedom and extremely rich content, as well as by the excellence of a good grasp of the game's playing the tala, become a very funny task of utkarjata. The gaming experience and working out of the PC version is not very different except. Even if the content has the ass, but the game still provides plenty of time to hit huge content. There is no doubt that this is a task that should not be remembered. If conditional players can consider with a handle... This touchscreen operation is really unsure. -APKAward.com APKAward.com
