With about 80% of all GSM use - about 2 billion people in over 212 countries, the widespread use of GSM makes it easy for most mobile phone users to use their phones abroad with roaming agreements between operators using the same GSM standard - and then labeled the original Groupe Spécial Mobile, thinking back in 1982, as the European standard for mobile phones. In Finland, GSM introduced the concept of sim card (card module, identity of the member) - the concept of the SIM card. The removable smart card, which allows users to switch phone numbers and contacts between 3G mobile phones - analog handsets are the first generation, while digital marking 3G second generation is loosely set, but generally has high data speed, always data access and greater audio capacity. High data speed is perhaps the most prominent and most hypnotic feature. They enable advanced features such as live streaming video. There are several different 3G technology standards that are most prevalent in UMTS, depending on WCDMA (wcdma and UMTS are often interchangeable). It is a special circuit designed to accelerate the image output in the frame buffer intended for output to the GPU display, is very efficient in managing computer graphics and is generally more efficient than the general purpose CPU for algorithms where processing large data blocks is done in tandem. Modern smartphones are installed. It provides short-term wireless high-speed data connections between mobile data devices (such as laptops, PDAs or phones) and nearby Wi-Fi access points (special hardware connected to wired networks). Older versions of Wi-Fi, The 802.11g can provide a maximum speed of 54Mbps and is compatible with 802.11b (up to 11Mbps),) the latest standard is called 802.11n (provides a maximum speed of 150Mbps per channel or a maximum of 6. It can be used in a band of 2.4 GHz or 5 GHz, although the receiver must have a dual-band antenna to use both Universal Serial Bus (USB) as a serial bus standard to quickly connect usb computer peripherals, changing serial and parallel port requirements to the interface device.
