This is a project of Android port open source project x86 platform, formerly known as patch hosting for Android x86 support. original plan is to host different patches for Android support x86 from open source community. A few months after we created the project, we found that we could do more than just hosting patches. So we decided to create our code base to provide support on different x86 platforms, and set up a git server to host it. This is an open source project licensed under Apache Public License 2.0.
