## Ibm http server

9/13 This section includes general instructions for configuring the port on IBM's HTTP Server i IBM for WebSphere 7.0 and 8.5.x, as well as setting up the correct virtual host. Complete these steps only once, then all subsequent installation of JD Edwards HTML Web Server will use the same webserver name that you created using the procedure in this section. This section describes this task: To configure a new HTTP Server example: Open the browser and enter this URL to start the HTTP IBM Server Web Administration console: Click the Manage tab. Select the HTTP Server you created in Creating a New HTTP Server Instance, for example HTTPSVR. In the left pane, scroll down and select &gt; Edit Configuration File. Configuration files include a port listen command for the port number you specify when you create an HTTP Server port in Creating a New HTTP Server Instance. This port number may not be the same as the port you specify when you install HTML Server. For example, if you select port 81 as an HTTP Server port, the command in the configuration file should be: Listen \*:81 When an example is installed with JD Edwards EnterpriseOne Server Server added to the httpd.conf file to include the contents of the scf\_&amp;lt;INSTANCE\_NAME&gt;.conf file. You can verify this by checking the following lines in the httpd.conf file (usually at the end of the file): Include /www/HTTPSVR81/conf/scf\_&amp;lt;INSTANCE\_NAME&gt;.conf Di &amp;lt;INSTANCE\_NAME&gt; which is the name JD Edwards HTML (HTML Server) created for example (for example, EA\_JS\_101 and so on). Refer to the sample screenshot below shows the instructions included in the httpd.conf file. Click the Apply button. Click the OK. In the Configuration file, add this command to the end of the file: &lt;Directory/qibm/userdata/websphere/appserver/v7/nd/profiles/defaults/= installedapps/dense/denying/ea\_js\_202.ear/webclient.war/web\_inf=&gt;Instructions allow access to the web store To protect your configuration files, subtract access to the WEB-INF directory by adding following the configuration file, after the instructions above. &lt;Directory/qibm/userdata/websphere/appserver/v7/nd/profiles/defaults/= installedapps/dense/denying/ea\_js\_202.ear/webclient.war/web\_inf=&gt;Order Denying,Allow Denying From All&lt;Directory&gt; Click Use button. Click the OK button. IBM HTTP servers for IBM i run in the QHTTSPVR substem, and each example HTTP server starts several jobs. WebSphere Application Server Code that installs to IBM HTTP Server for IBM i runs in the work of HTTP servers that communicate with administrative servers and one or more application servers. There are two ways to start IBM HTTP Server for IBM i example: To start IBM HTTP Server for IBM i Instance from the command line: On the command line i, masukkan ini&lt;Directory&gt; &lt;/INSTANCE\_NAME&gt; &lt;/INSTANCE\_NAME&gt; &lt;/INSTANCE\_NAME&gt; &lt;/INSTANCE\_NAME&gt; STRTCPSVR SERVER (\*HTTP) HTTPSVR (MYINSTANCE) where MYINSTANCE is the example name of your HTTP server. The cepter of this name shall match the recommended nomination conventions set out in this guide. For example: HTTPSVR If you change your HTTP server example configuration, stop, and then start an example of your HTTP server. The Configuration and Administrative Forms also allow you to choose to restart your HTTP server example. When restarted, the HTTP server will recognize all configuration changes except changes to the Basic and Security configuration form. Start your JavaScript-enabled browser. Enter this URL in the location window or URL address:&amp;lt;server\_name&gt;http://:2001/HTTPAdmin at &lt;server\_name&gt; which is your IBM system hostname. Press Enter to navigate to the URL. The Tasks page i IBM appears. Click the link for IBM HTTP Server for IBM i. IBM HTTP servers for the IBM i page appear. Click the Manage tab. The Manage page appears. In the right pane, click Manage All Servers. Click the radio buttons on the left side of the server you created. Click the Start button. This message appears in the Messages box at the bottom of the screen: HTTP servers start. A screenshot of the sample is provided below. You can test WebSphere by accessing the default app, but the default app requires Port 80 to be configured with WebSphere. You can configure Port 80 with WebSphere using previous tasks in this chapter. To test WebSphere Application Server: Make sure IBM HTTP Server is started (as described in the section above: Starting IBM HTTP Server for IBM i Instance). If it hasn't started, start webSphere default server (server1) using the commands in chapter: Start webSphere. Access the default snoop servlet using this URL: machineName is the server name where you install HTTP Server. If you change your HTTP server example configuration, stop, and then start an example of your HTTP server. There are two ways to stop IBM HTTP Server for IBM i example: To stop IBM HTTP Server for IBM i example from the command line: Enter this command on the IBM command line i: ENDTCPSVR SERVER (\*HTTP) HTTPSVR (MYINSTANCE) where MYINSTANCE is the example name of your HTTP server. To stop IBM HTTP Server for IBM i example from the IBM configuration and administration form i: Start your JavaScript browser is enabled. Enter this command in the location window or URL address: http://&lt;server\_name&gt;:2001/HTTPAdmin at &lt;server\_name&gt; where your IBM system hostname is. Press the Enter. You button is prompted for the IBM user ID and password: Your IBM user ID must have \*ALLOBJ AUTHORITY. The Tasks page i IBM appears. Click IBM HTTP Server for IBM i. IBM HTTP servers for IBM i pages In the upper pane, click Administration. Administrative Page&amp;lt;/server\_name&gt; &lt;/server\_name&gt; &lt;/server\_name&gt; &lt;/server\_name&gt; &lt;/server\_name&gt; &lt;/server\_name&gt; Click Manage HTTP Servers in the left-hand frame. Click the radio buttons on the left side of the server you created. Click the Stop button. This message appears in the Messages box at the bottom of the screen: THE HTTP server ends. A screenshot of the sample is shown below. Fonte: ebasso.net Wiki This article has multiple issues. Please help improve it or discuss these issues on the discussion page.
