Personal narrative essay examples for middle school

The first, biggest battle when it comes to becoming a parent in a high school is this: wrapping your mind around the fact that your baby (with an emphasis on the baby) is about to be tossed by wolves -- or at least the bearish knot that seems to populate your child's future school. Since when do sixth-graders grow barns? Okay. Don't breathe into that paper bag. Your kid's going to be fine, you're the one we're worried about. We know that as a parent, it can be hard to see your baby grow up and become his own person. Watch as they accumulate under pressure from a new school, peers, sports and homework, and that's enough to turn time back to simpler days - the ones that get a fearless toddler into broccoli eating. But that, my friend, is your first mistake. It's time for the mental game to move. If your child's foray into high school becomes ok (and it is), you've got to get your head in the game. And that means recognizing the child growing up and mapping a strategy to deal with it before the first day of school arrives. Survival Strategy 2: Independence Day Sweet Freedom. High school students crave it, but they can't handle it too much, and maybe you're not ready to leave. The key is to strike a balance that's healthy for both of you. One way to do this is to fulfill the child's desire for freedom (which, by the way, is a natural development event) by allowing him to participate in various approved activities. Playing on the basketball team, for example, offers your child an outlet for many things: camaraderie, physical activity and even peer pressure. yes, pressure can have a silver lining. Just ask any tween who has failed pre-algebra, has been benched by the coach and let down by his teammates. It won't happen again. Better yet, organized extracurricular activities offer your child a (supervised) chance to get away from their watchful eyes. But you can still participate by cheering on games, applauding a two-act game, or going to an art exhibition. Whatever interests your child, give him a way to explore. Your task is to provide boundaries, restrictions and support. One way to practice your role is when it's time for homework. According to the National Association of School Psychologists, homework teaches children how to manage time, make decisions and solve problems. Help your child set up a system - a place and time to learn the resources they need - and then let them deal with the challenges of high school homework without your floating presence. Keep in touch with teachers, even if your child ensures it's the coolest thing you've ever done. That's why a smart person invented emails to send an occasional query to a child's department Survival Strategy Three: Oh, the drama is hard to get a tween bent teen-hood. No No there is increased self-awareness (thanks, puberty), but there are also a host of new relational situations encounters. When the school becomes a fashion show or popularity contest, this drama will be a bit risky. That's because it's hard for parents to know when to move on and when to let their son or daughter work things out on their own. What happens is that he agrees with Joe Bruzzese, author of the Parents Guide for high school years, who advises parents to play a supporting role as peer relationships form and dissolve. Sure, we've been guilty of dialing the evil girl mom and we'll tell you, but we've learned the hard way that usually doesn't help. Avoid daily friend drama, but you're willing to step in if you feel your child is being bullied. Another minefield to avoid? Fashion. Set some clear boundaries, such as hemline length or waistband stopping point, but be willing to give your child some say in what he or she wears. While the tweens are clamoring for friendship in high school melee, they're likely to try different styles. Personally, we don't start to worry until we talk about tattoos and more piercings come into play. As you guide high school, remember: Your role is not one of perfection. Shake off the nagging doubts about self-worth that bubble to the surface for the first time when you chaperone a high school dance. (Hey, this is happening!) The key is to participate, even if it allows the tween greater autonomy. According to a report by researchers at Johns Hopkins University, when you get to the high school scene, your child is more likely to have better grades, participation and homework. Plus, they'll be prepared to succeed in high school. Are you hyperventilating again? Ok. Put that paper bag down. Let's leave our high school conversation to another day. Page 2 School time means stacking pencils, glue sticks and other traditional supplies that have been stored in children's generations' tables, cubbies and cabinets. In primary and secondary schools teachers usually give lists of specific items to pick up; and even in high school, many instructors require certain types of notebook paper, pens and the like. In addition to the classic props - pencils, notebooks, rulers - that constantly make these school lists, there are a number of other things to keep in mind. Today's student has an arsenal of tools and gadgets to help him manage his workload and enhance his learning experience. Whether it's a fresh spin on a classic or a new-found gadget, these five cool school tools make it a grade that your son or daughter is studying in style. Content Even pre-K students get an advantage in computing know-how with learning laptops. For less than \$50, these laptoplike gadgets can confirm basic skills are taught in the classroom entertainment, educational games and and In their short history of learning laptops now come the hand-sized more sophisticated graphics and extensive software that includes subjects including reading, math, foreign language and more. Kids can navigate many of these models with keyboards, electronic pens or control panels, with an interface like a video game system. For middle and high school students who need word processing capabilities and Internet access, netbooks are a great option. Priced at a few hundred dollars, these mini-laptops are grabbing tech headlines for their utility and affordable. In fact, some schools are starting to take advantage of netbooks in the classroom thanks to budget-friendly tools. Advertising Finding the perfect backpack is key for many school-age children. After all, they tote around with them every day and want to make a good impression. Parents are likely to be more concerned about the toll the package takes on those young advocates. Fortunately, there are alternatives out there that please both parties. Unfortunately, you're probably going to have to spend more money in exchange for ergonomic quality. To protect your back and spine, look for packages with lots of padding. Padded straps and rear panels are good signs. Make sure the straps fit tightly to the body and that the backpack has a chest strap for further support. When wearing the backpack, you need to sit higher on your back, not by straining the spine at the hips. There are also rolling backpacks to choose from, but some schools don't allow them anymore. And it may reduce the crucial cool factor that the student demands. Advertising It is important for school children to learn how to add, extract and so on in their minds - occasional help with their fingers and toes. But when the higher math spins around in high school and forward, it's time to pull out the big guns. Calculators have been a routine item for older kids' backpacks for a while now, and now offer more mathematical and scientific help than ever before. Texas Instruments, one of the most common brands of calculator manufacturers, offers additional software, memory storage and pre-installed demonstration programs for certain models. Students can now choose aesthetically pleasing calculators such as bubblegum pink graphic editions and fire engine red starter models. Advertising Pencil and paper never go out of style for taking notes. But for the techie students out there who want to get the most out of their note-taking capabilities, Smartpens are neat and relatively cheap at around \$150. The LiveScribe Pulse Smartpen writes on special paper that digitally records what it writes and where it is on the site. At the same time, the pen can record the sound, which means that the student take notes and record the presentation. When When Time for learning, the Smartpen hooks into your computer to download all the notes from one source. This way, students can place the Smartpen on the special paper so they can hear the right sound. If the student doesn't require that much tech magic, the FLY Fusion Pentop Computer's Leap Frog can digitally record what a student writes. The writing tool then converts the written notes into digital documents. Like

the LiveScribe Smartpen, Pentop also requires special paper. Since the Pentop doesn't save audio, there are many discrete mP3 recording and audio recording on ras for iPods that can fulfill that function Advertisement Among the note-taking, laptop learning and backpacking toting, kids have to do their homework. Whether it's solving a difficult math problem, researching a science fair project, or creating a paper plate for a study, the web has plenty of educational resources. But tracking down the best of these resources can be challenging, and parents are being staked about releasing their children online. Fortunately, some companies have developed robust home help programs for students at all learning levels. DiscoveryEducation.com, for example, will help you with seven different subjects, as well as interactive games and student-customized external web links for further education. For a monthly fee, Cosmeo by Discovery Education is a one-stop shop for Discovery videos, scientific articles, step-by-step science education, and more. Taking advantage of the breadth of valuable information online, kids can improve their learning experience and continue to get A+ degrees. Ad
