Neewer 160 led cn-160 dimmable

In a quick summary... if you don't have this lamp yet, go and buy it now. They have some weak points, but you can't argue with that price. They are far from the most powerful lamps available, or the most reliable, or best for battery life ... but at less than \$50 for TWO (less than £40 in the UK) how could you possibly go wrong?? Scroll down to the bottom for a video we shot using only these two lights. LOW COST REVEIW KIT: NEEWER 160 LED CN-160 Dimmable Ultra High Power Panel Light – REVIEW Even if you only use double lights, you've got two sessions with good LED lights for about a quarter of the cost of renting them, and you still have the option to use it again! So... for business ... Here's what's good about this Neewer LED lights: Power output is fine. Sure, it's not the best in the universe, but it's far away, far from the worst. As long as you keep this CN-160 light close to your subject, you'll find you get enough light, more than enough to make a difference to your photos or videos. Check out the bottom of this review for videos we shot using only two of these NEewer LED camera lights! They're cheap! Maybe I have to say that again, should you miss ... They're cheap! But they're not just cheap, they're so cheap! It's really crazy. For the same price as ONE Litepanels Astra 6X, you can have nearly 70 x Neewer CN-160s. CRAZY. You can power them with AA batteries, or Sony NPF batteries (quite a lot of industry standards, and cheap as chips for batteries and chargers, see other reviews for more on them), or with the adapter they'll take Panasonic CGR-D batteries as well. They come with a mountain of hot shoes as standard, which means a simple attachment to the top of your camera, if that's how you want to use it, or with an adapter to a light stand. They are daytime colors (5600K) and come supplied with tungsten filters (3200K), and dispersals, which only slot in front of the LEDs.They are dimmed. There is a small wheel on the side of the unit that allows you to gradually adjust the power up or down. REVIEW: NEEWER 160 LED CN-160 Dimmable Ultra Panel High Panel Light And here is what's bad about them... Not a great battery life. They flow when switched off, when using their AA bats die as the AA bats come to the end of their life. Work well on sony NPF batteries though. Not the bright lights available. But also not the worst. They feel cheap, they are plastic and quite large for power output. On Amazon they now have a score of about 3.5 but what's really telling is reading the reviews themselves. I always read the reviews carefully, but I also always, always read between lines. Take a look at what reviewers are saying and ask yourself why they say that, what prejudice they have when they buy a product, and perhaps what unreasonable expectations are carry on when I test the product and write a review. Poor Battery Life Almost all of the bad reviews for this product refer to battery life. They don't really complain about the battery life itself, especially the drain battery even if the unit is not used. And they die right. The battery performs a drain when the unit is switched off. But here's the thing ... Here at our BudgetProPhoto ethos, our mantra, is that if you pay the bottom dollar for your equipment, you need to be prepared to make a concession. If you are not ready to make a concession, then you are not satisfied with your equipment. It was as simple as that. So here is a summary of this product, including important concessions: these lights, for price, are incredible! More than extraordinary. They are insane! Take rough smoothly! Sure, they drain the battery even when switched off. So, in exchange for saving hundreds, maybe thousands of dollars if you buy some lights, you have to remember ... wait for it... to take the battery when you do not use it. I am very sorry to have to deliver this terrible news. I realised of course, how many of these shots will be... Seriously guys, get to grips! Take the battery out! Use the cheapest lights in the business, and be happy with the fact that, literally the most tiniest amount of extra effort, you get high-quality, almost for free lights. Once you stop expecting the \$800 function to \$40, you will suddenly be the happiest person in the business! Let us know your opinion on this review, whether you agree with our assessment, and anything else you want to say by clicking a comment at the bottom of the article. Our advice is to go get these lights out now! Here's a video we shot using only NEEWER 160 LED CN-160 Dimmable Ultra High Power Video Lights Note: Compatible Battery (Not Included): AA Ni-MH battery or Alkali; Panasonic SD Series Li-ion Batteries; Sony Li-ion Battery FH, FM and F models.
