Crane institute of america inspection forms

CIC proudly offers certifications to crane operator Telescopic Boom Cranes Boom Cranes Multifunction Cranes Tower Cranes Rigger / Signalperson Rigger / Signalperson (includes Rigger Level I & Level II) Master Rigger ADA Accommodation CIC allows ADA accommodation in certain test situations and provides documentation on the Forms page for this purpose. However, all crane operators must meet OSHA and ASME standards for physical and mental abilities. In particular, ASME B30.5 requires crane operators to demonstrate the ability to read, write, understand and use an arithmetic chart and load capacity in the language of the materials provided by the crane manufacturer and the employer. CIC does not recommend applying for certification if you are unable to meet these requirements and firmly states that certification is not a guarantee of employment in this area. Mixing Paper & Electronic Testing CIC is unfortunately able to provide research for a group in which candidates use both electronic and paper tests in the same session unless valid ADA documents are provided for these candidates. While CIC understands that some people may be uncomfortable or unsociable with modern technology, the construction industry is changing rapidly and will require these skills more and more often to remain employed. Mixed test groups also pose additional challenges for CIC staff to ensure accurate registration and dispatch of exams and increase the risk of costly errors. Therefore, the CIC requires all candidates in the test session to be registered for a single method of delivering the exams. Thank you for the most interesting on our sites. We are a non-profit group that runs this website to share documents. We need your help in maintaining this website. For our site to work, we need your help to cover the costs of our server (about 400 USD/m), a small donation will help us a lot. Help us share our service with your friends.
