Maverick and booner angle by hinge latch for slide lock seal 3 00. Booner blinds are made of 3 16 HD polyethylene uv protected and made in usa. All windows are clearly plexiglass. Heavy textured deer blinds in a variety of sizes. So... I checked on what Menards had to offer today ..... and sitting high on their shelves was a nice looking box blind with windows and fairly good looking construction. 4' x 4' x 6.5' Tall. I couldn't watch it carefully because some brain surgeon put it on top of their racking and didn't let me climb a ladder to look at it. Duh. The species looks great.... and the material looks good to me... and the price is \$450. !! Good deal IMO. Ad a plywood base a set of lift brackets and some 4x4 treated posts and a ladder..... And you about \$650 in a good box blind. Anyone have a good look at this?..... Or bought someone one of these. I'm tempted to add to my fleet. Good price. Photos to follow. images.tapatak-cdn.com/15/10/02/9a2a18f84c60e4c2ea43846ffc655ebb.jpg/IMG [IMG]/images.tapatak-cdn.com/15/10/02/ea22f149526e54eafcc498ed29152ff9.jpg Sent from my iPhone using Tapatak Shipping from my iPhone using Tapatak^ The brand name is Guidesman Box Blinds. Made in Michigan. (Google is your friend.) I thought about it... I would wait until January when they go on clearance and also have 11% rebathage going on. Bought some 16.5 foot leather stand last January with good seats, arm rest, etc. for &lt; \$80. I think the in season price was \$135 or so. The cheap 15' leather stand on the right side of your photo can be had for &lt; \$35 in January. However, they are not a comfortable sitting. Fitting and finishing the roof on sides leaves a little bit to be desired, but I don't know if it indicates the same for the rest of it or not. Either way, someone has to get the fork truck... how can you buy before trying? ;) I'd hunted out of blinds like this before and wasn't a big fan. Not sure about this brand, but it will have to isolate to dampen the sound. Every time I would barely move or rest my bow against the side, it was very loud. The colder it got the harder they got. I'd think you could find ways to cut off the sound pretty easily. Welcome Erik. Great group of people here. Lots of knowledge. Where are you from?? Thank you tools! I live south of the small town of Watkins, MN and hunt East of Sandstone, MN. I'm trying to change my name to EasyMN. That was my handle on QDMA. I suppose I have to transition and introduce myself on the other forum along with updating my profile. Just learning the new system here. Good to see you finally made it here Eric. Welcome. Yes was out of the forum game too long and missed it! Was that box well enough isolated, you think? I'm sitting like that in MO in January that had carpet but nothing on the walls. Yes was out of the forum game too long and missed it! Was that box well enough isolated, you think? I'm sitting like that in MO in January that had carpet but nothing on the walls. I doubt there is any isolation. I'm sure some low-cost lightweight carpeting can be applied. I had some plastic blinds with just carpet on the floor. I really don't find them to be noise. I don't bang too much on the walls. :) Just move slowly and don't get excited. :D So many answers left to get excited, but this is my first day... so I'll keep it clean and stay on topic. If these stands worked for you than I would say go for it. That's a good price. I'd foam spray any cracks to keep the cribs out. From what I've seen from this in store, it's plastic panels no insulation and over not something that seemed very durable or solid at all. Fit and finishing was pretty poor, but if you wanted fast and cheap - then you get you and cheap. I would either build one myself to get a quality ground blind instead. But that's just me. I'm sure with some help it would be a decent blind, but right out of the box I wasn't impressed with what I saw. They've been there for at least 3 weeks, as they had them there when I ordered the siding for the sheds. It was pure stupid luck I noticed them. Not a good position for marketing, and I agree that you have to sit in it before you agree to buy. I agree they may not have a perfect fit with the joints..... but they look good made... expesial for the money. I think of two tubes silicone would solve the gaps and maybe a little lightweight carpet under the windows would be in order for guys who can't sit still (:D). Looks like dedication of banging for the buck..... but I didn't come close enough to them to know. As stated.... it could be on my shopping list for next year. Foggy- Does it say whether the plastic is stabilized and UV resistant? Not sure about stabilized.... but I've seen UV-resistant in the features. Looks like someone knows a thing or three about plastic here..... so I think they covered the bases. I'm pretty sure she made of vacuum shaped LDPE..... which would be very tuff.... and should last a long time. If only I knew two loaded guys to make a start-up making high quality blinds for a reasonable price. We could own the market. :p I wouldn't be surprised if it was made for (or by, even) to sell Menards at a price point. The forms are not cheap, even if they are just vacuum with hot sheet. The roto-shaped stuff is a cash-intensive proposition, but you get a better product. Looks like with a little more thought given to the engineering you can have a rigid panel as tight as the roto, but almost as cheap as the vacuum offerings, and better sound qualities to start. Yes... but the thing with panels (like this one) is that you can send 20x the quantity for the size of ONE rotomolded (or fiberglass formed) blind. Redneck Can Only Ship 7 Blinds On A Truck Cargo! o\_o;eek: It kills freight costs. Panels will allow about 100 on a truckload (maybe more) and the freight costs are going down dramatically. It's a big deal you want to send some to Texas -- for example. I also have an idea for the blind... and I have experience making things like this (RV industry for years) ..... alas..... I don't want to work. :D They absolutely need to collapse. Page 2 found a little more information about the topic blind. Go to their website at terrain.com Michigan company that makes plastics outdoor products. I like what they offer..... if only I could get close to better looks. :rolleyes: Menards have specs on their website. Can see some guys like MO who have a hard time accessing land use something like that..... only 70 lbs and wing-bolt field assembly..... or make it permanent on an elevated platform. Someone had one on their trailer today with two other blinds in the parking lot. Then they pulled with a second trailer with at least a bunk bed of green treated 4x's. I had to get back to Discounts to get a nail removed or I would have stopped chatting. Today, I heard an ad for 11% of most everything at Menards. Hmmm. \$400. for a box blind? Not too shabby. That's ok by me. It's not like I never have to spend money at Menards again. Hell, I'll probably be there 2 or 3 times this week. Very tempting to try one of these blinds. I'm interested in one like this just for a gun blind. I even thought about the maverick just for gun. But it could be better. Ok Foggy, I live in W MI that's definitely not as cold as MN when the snow and nasty cold air comes. But the inside of this thing screams freezing cold, lol. You'll have to isolate the hell out of this thing to keep heat. Just put your HBS on and relax. At least you're out of the wind. If I didn't add foam insulation to the inside, I'd paint the inside black for sure just to make it darker and hide movement. Ok Foggy, I live in W MI that's definitely not as cold as MN when the snow and nasty cold air comes. But the inside of this thing screams freezing cold, lol. You'll have to isolate the hell out of this thing to keep heat. I don't know. It looks like my ice shanty and that thing remains toasty hot with a buddy heater perched on 12 from ice. We have several robotic soldered plastic blinds. We put carpet on the floors..... and put a buddy heater in them. They're not toasting like your living room, but we stay pretty comfortable in 0 temps. Not sure what you expect? We leave a few windows open. I take off my ice gloves. Beats sit on a ladder stand. :) I don't see insulation has a lot of value for warmth. Little buddy heater would have that blind roast hot. I recently bought one of these. The hecxy design. I'll report back on his quality, meeting, and so. Worst Case, I Bet It Makes large portable ice house for dam fishing. Weigh in at only 125lb Yes. Please let us know. Thank you. Looks like regular price is \$400 now without holy squirt foam. Wow!!! Blind looks cool, looks like you've gone HAM on the foam. Awesome!!! Sent from my iPhone using Tapatak I purchased the pentagon shape of Menards a few weeks ago for an elevated blind I built. I went to the wooden desk and had them ringing 8 sheets of plywood and a bunch of 2/4's. The total for the wood alone was more than \$300, which did not include windows or any kind of finish to protect the wood. After I got the wooden desk I walked through the pentagon formed blind of the same guys you discussed here. I immediately went back to the desk and got rid of most of the wood and had them add a blind :) Here's the finished product: It's not isolated by any means, but I've stayed beautiful and warm in pop-up blinds in the past with a little buddy heater. This thing will be much hotter than a fabric blind. I finished it in time for the Wisconsin 2 day youth season. Jake connects with a buck on Sunday night! Sorry for the poor quality, it got dark and all I had was my phone! - John That's quite the heightened blind John. Maybe that's the corner, but I don't see a tongue on that unit. how do you rotate with that thing? I imagine it's for off-road edges? I wanted to build some transportable hay bale blinds to put in my prairie grass, but haven't come to terms with it yet. Nice deer Jake, congratulations. Do they make one with bow windows at all? Sent from my iPhone using Tapatak Page 3 This is quite the elevated blind John. Maybe that's the corner, but I don't see a tongue on that unit. how do you rotate with that thing? I imagine it's for off-road edges? I wanted to build some transportable hay bale blinds to put in my prairie grass, but haven't come to terms with it yet. Nice deer Jake, congratulations. Freeborn - There's a tongue on the running gear, it's just the corner of the picture. I built it specifically to hunt a field edge of the high spot on the whole field. In the past we used ground blinds but had to choose which side of the field to watch. Now we can see the whole thing :) I wanted it on wheels so I could move it off the field for the majority of the year as the location makes it kind of an eyesore. Do they make one with bow windows at all? Shipping from my iPhone using Tapatak Menards doesn't wear one, I'm not sure if they have other models or not? Thank you, -John What about high snow loads? Do you guys think these things will rise to 2'-3' snow? The way the roof is made, do I doubt the snow would stand on it? If it did, I don't think it would hold 2' - 3' feet. They don't look so strong. Sent from my SM-G920V using Tapatak The way the roof is made I doubt the snow would stand on it? If it did, I don't think it would keep 2' - 3' feet. They don't look so strong. Now we can see the whole thing :) I wanted it on wheels so I could move it off the field for the majority of the year as the location makes it kind of an eyesore. Do they make one with bow windows at all? Shipping from my iPhone using Tapatak Menards doesn't wear one, I'm not sure if they have other models or not? Thank you, -John What about high snow loads? Do you guys think these things will rise to 2'-3' snow? The way the roof is made, do I doubt the snow would stand on it? If it did, I don't think it would hold 2' - 3' feet. They don't look so strong. Sent from my SM-G920V using Tapatak The way the roof is made I doubt the snow would stand on it? If it did, I don't think it would keep 2' - 3' feet. They don't look so strong. Now we can see the whole thing :) I wanted it on wheels so I could move it off the field for the majority of the year as the location makes it kind of an eyesore.
