Steampunk art ideas

Catch up on the latest daily buzz [🐝 BuzzFeed Daily Newsletter!](#) A group of artists gathered a few months ago to put together the best Mad Max-themed high fashion photo shoot they could do. Mad Max: Fury Road just took the Oscars by storm. To celebrate that victory, here's a look at this amazing set of photos. March 1, 2016, 11:36 If you're a Lord of the Rings fan or really want to have a great resolution that hits everything, this is the biggest New Year's resolution you can do every year and is set to take it perfectly the following year. December 30, 2014, 9:13 AM Do you want to be part of the history of animation? Below are five spies who stand out from the rest, unique in their wit, independence and complete boldness. Some are fanciful, some are awkward and realistic, but they're all really iconic. April 24, 2014, 11:47 AM Has Gaga went gaga for steampunk again? October 27, 2013, 11:28 AM Now You can play poker in five great vampire novels, according to the latest issue of steampunk Oct 21, 2013, 6:47 PM Dark Beauty magazine An rice to G.D. Faulksen. February 11, 2013, 4:10 AM Kitchen Collage Decorates the walls with shadow boxes holding items likely to be found in the food preparation area: cellulose sponges, bottle cap sports graphic logos, stainless steel kitchen mounts. Make vivid backgrounds from art supply paper cuttings to fit inside the box. Create dynamic placements using asymmetric groups. Alternate the orientation of the sponge vertically and horizontally (to maintain the color of the sponge, rinse with a 50-50 solution of water and mineral oil, squeeze out and dry for 1 hour). Set the bottle cap to a diamond pattern. Pull one cap away from the rest. Place the whisk on the left edge of one box, then echo the vertical line to the display with a combination of small tools with one on top. Set one pair slightly higher than the rest. Stick sponges and bottle caps on the background with glue guns, tools with Velcro adhesive back fasteners (available at craft stores). Spools of living area artwork fabric strips, tassels, paint chips, tiles and threads lend designer talent to shadow boxes. For visual unity, select a box with the same color frame and use the same fabric as the background. Wrap the dough around a 1/4 inch thick foam plate precut to fit the box. 1 Secure the fabric edges to the back of each board with strips of 1 1/2 wide packing tape. Let the fancy velvet tassels take center stage in one box. The other alternates spools of eight threads in two columns to form a checkerboard pattern. Stacking flat items such as paint chips and paint chips in the third box like a decorator design board. Attach a lightweight object to the background with 1 1/2 T-pin (available in craft store). Use glue guns to adhere heavy items like tiles and spools. Tip: Amazing items in-blow energy and placement. Symmetric layouts convey order and balance. Office space decoration desktop supplies can be wonderfully graphic when presented in a silver brushing metal frame. For the background, trim 5 pieces of art supply paper (2 grays, 1 rust, 2 browns here) and 3 1 1/4 thick foam boards to fit the frame. For the upper frame, attach a piece of gray paper to a single board with multipurpose spray glue (available in the craft store). Use the 1/2- inch T-pin to secure one end of six large red, blue, and purple rubber bands (alternate colors) to the cluster in the upper-left corner of the background. Stretch each pair diagonally towards the lower right corner to form a starburst pattern. Secure the loose end with the T-pin. For the center frame, spray-mount the rusty paper to another board. With the X-acto knife and ruler, cut out the plus sign in the center of the board. Make Xs in each corner with a metal pushpin. Slide a sheet of brown paper under the board. It is displayed through the plus sign. For the lower frame, spray-mount the second piece of brown paper to another board. Use a knife and ruler to cut out thin, stepped, unsynthiguous borders. Then work outwards from the center of the board, layering selfie stick notes in three colors to create a weaving pattern. Leave a space between the note and the cut-out boundary. Slip the remaining sheets of gray paper under the board; This content is created and managed by third parties and imported to this page so that users can provide their e-mail addresses. Most of the materials I get, I had to buy some things for this project, but most of the materials I get can find details about this similar content in piano.io from recycling depots, curvside chuck-outs, donations from friends! Larry Canteen (Box) 1x Brass Horn - These are repos imported from India (1 of many sites: 1x mini stereo amplifier - which I built from an old kit I was lying in my home, it has an LM380 audio amplifier, but really you need to use a mono amp for this! 1x Transformer feels blue 2x1.5 meter square to run amplifier 2x potentiometer knob 2 x 1 meter shield audio cable 2 x 3.5mm stereo plug 1 x 3.5mm stereo socket 1x Power Lead Main 1x Power Socket 1x Power Switch (3 Way) 2 x Main Drive LED Light (1 Red and 1 Green) 1 x 100mm Square Acrylic (Thickness 3mm) Equipment: Drill Bard iron & Bar wireDremel (mini drill) hole drill bitwood glue JB weld (epoxy) varnish (I use Danish Oil) Brasso 000 wire wool propane torch and silver bard (ally you can use good epoxy) sander and sandpaper This is a neat build. But it's really just showing off the final product and doesn't give you any steps on how to make this. Update this instruction to include the steps so that others can learn how to create them. I've had this idea for a while. It's good to see how some are coming together. Perhaps replace the nylon strap with elastic or leather. It sticks out like a little sore thumb. But great job. Here I am 50 years old and now look at this steampunk stuff and why they didn't have this when I was a kid, you don't have to be a kid to look great in steampunk attire! Quite the opposite. yes, I wish I could grow a Gentlemen mustache. It looks like a brass sink drain fitting. Is that right? What are leather-looking eyepieces made from? Psh, I don't know what it was, XD just found a random thing I was lying around. I built mine a little bit like a leather eyepiece made from some thick cow leather, just started collecting up to the images of inspiration that formed in my head and the boiler it's spectacular. The perfect amount of steam panky goodness without being too messy or messy. Beautiful execution. I'm inspired. Has anyone thought of doing Mad Eye Moody's magic eye from Harry Potter? It just came back here, building this and with a glass eye in it. Same thing. By the way, can you give instructions from it? 1. I couldn't find the same parts I used (I found them in the garage). 2. because you can't do any tutorials like this. You need to be inspired by the painting and build out of it and I just saw the end of that pipe and thought, Hey, it's going to be a cool eyepiece, so I just threw some random wires in there and glued the straps on top. If you build something, I'd love to see a picture of it! You can have a pretty cool pair of goggles, but I'd still use baseball as my base (while I'm mostly destroying my mine), yes, I do it and I'll post it as a slide, my neva is going to take fotos when I'm working.) I kindly would like to make a functional monocle to help with delicate tasks like looking at circuit boards (my eyes are not the best in the world thanks to my monitor). I'm still working it through it. If your vision problems are not so complicated, it may work. I have myopia, ast disturbance and presbiopia myself. That's when I get a real good monocle type viewer that works except for limited space and situations, like advance distance. But I really would like to be if I could do alastair Moody's magic eye. No, I stare at two big monitors for hours at a time and then have weak eyes. My glasses will work, but it's not as geeky as the souped-up monocle!
