It is not compatible with Genie Intellicode transmitters (If the keyboard contains intellicode printed on the cover, go to the next set of programming instructions below). The door icon in the step-by-step action on the right is determined by the internal switches inside your transmitter and the accompanying chart. Select the settings of the first 3 switches and write the corresponding number of the chart. Continue with the following 3 switches and its matching number and so on, until the last set of 3 switches. You must have 3 or 4 door code numbers. Door Settings Switch Up7UpDown6 UpDown5 DownDown4 DownUpUp3 DownUpDown2 DownDownUp1 DownDown1 Down0 Door Code in Step 4. _ You can Print a readable copy of the chart and programming instructions from your word program. Step-by-step programming procedure reset keyboard - slide the cover keyboard halfway. While pressing the #and 8 buttons at a time, slide the keyboard cover the rest of the way until it is sledded. Release #and 8 buttons. At this point, if the keyboard light is lit again stays on, go directly to step 2. If the illuminated keyboard light comes out, close the cover panel and reopen until it clicks. Continue to Step 2. Press 3, 5, 7 and # buttons in order. Enter your PIN and press the # button. Your PIN can be created from any set of numbers up to 8 numbers of your choice. Note: Do not use # or star key. Enter the door icon, as specified from the chart above, and press the star key. Slide the keyboard cover down. Test the keyboard by sliding the cover up the latches. Enter your PIN and press a star key. Your wireless genie door should work intellicode key-entry without programming key: 3 model models 1: fumble model GWKIC, ACSDBG (black with slide-up cover and word Intellicode printed on the cover) GWKIC, ACSDG, part two, step-by-step programming Part 1: To reset the intellicode wireless keyboard cover open halfway. Press and hold prog and 8 while opening the entire cover. The light indicator will flash once and out. Close the entire lid. To the Wireless Keyboard Program Intellicode open the entire cover by sliding the keyboard up latches. Press 3-5-7. Click on PROG. (Red Light Flashes) Enter pin. Press PROG. (red light flashes quickly) close the entire lid. Go to Part 2 below. Note: If the red cursor light does not flash, it does not take programming steps. Check the 9-volt battery under keyboard numbers. To arrive, press inside, under the lip plate number while slipping down to expose the battery. Part 2: Gently press and release the recipient's learning blog button on the receiver of your power head garage door genie opener (genie drive on the ceiling). Located behind the optical lens at the engine head, this small black button is the closest 6 flexible antenna wire to the power head. When pressed, the radio signal indicator will start with a red flash for 30 seconds. Enter your PIN after pressing the learn button on the icon above, while the engine head indicator lamp flashes. Press SEND twice for your system to grab your frequency and code in. Press SEND once to test the system and start moving your door. Add more doors to the keyboard: A fully open cover. Enter PIN 1. Click on PROG, PROG, PROG. Enter the total number of doors (2 or 3) click on PROG. Follow the instructions below to adjust each door. Press the Learn Code button. Enter PIN 1. Press send the input door number (1, 2, 3) press SEND three times. Close the lid. Test by opening the cover, enter Enter 1. Go to the next device and follow the steps from 8 to 13. With most genie units, remove the globe light lens to expose the learning button on top of the engine. The learning button is sometimes located on the back of the unit, or with Excelerator openers, it is under the light lens near the globe joint lens. Locate the flexible antenna cord first. The learning button can be found not far from this antenna. See Troubleshooting directories for Excelerator image. To make a copy, highlight the area and copy it in the word program. You can then print a readable copy of the layout and programming steps of the word program. Model 2: Intellicode GWKP model (outside white with face-up cover) programming instructions for WWKP garage opening keyless entry door involves following two sets of steps below: to erase the old PIN (ID) press down, order, PROG, 6 and arrow up/down keys. The red LED will flash once and then turn off. Release the buttons. To the program: Press in order, but don't hold down keys 3, 5, 7 and PROG. Enter your chosen PIN, anywhere from 3 to 8 characters. Press prog (red LED flashes – twice a second and off) find the learning icon button and led indicator light on top of your genie engine inside the garage. It is usually behind the light lens and close to a flexible antenna wire. If you do not have an air-door opening tool, you have an external receiver. The external receiver cover must be removed to access the code learning button and LED indicator. Follow the steps 1 to 3 described below: Press gently and free the Learn Code button. The red LED light will start to flash. It will flash for up to 30 seconds. As you flash, go to Step 2: Enter your PIN and press the arrow key up/down on the keyboard. The LED learning code pointer will remain on. Press the arrow key up/down again. The indicator learns the stop indicator code. Wait until the keyboard backlight is turned off (approximately 30 seconds). Test by entering your PIN and pressing the arrow up/down the key to run your door. Multi-garage door door programming door for GWKP- All garage doors will use the same PIN: enter the PIN and press prog (red LED flashes once a second). Press PROG again (red LED flashes twice a second). Press the number of doors you want to control (2 or 2 keys 3). Press PROG (red regenerated flashes several times and turns off). They decided which door would be #1 the door #2 #3. Press the learn code button on top of the engine. Enter your PIN and press a top/down key on the keyboard. Press the number you have chosen for this door-opening tool (key 1, 2 or 3) press the top/bottom key. Repeat steps from 6 to 9 per door opening tool. To make a copy, highlight the area and copy it in the word program. You can then print a readable copy of the chart and Steps of your word program. Model 3: Programming instructions for GK-BX Wireless Intellicode Keyad. Works with genie systems using Intellicode 1 and Intellicode 2 controls. The allergic code 1 refers to all systems manufactured from 1995 to the present, except for 2011 and 2012. Intellicode 2 refers to most units made in 2011 and 2012. Intellicode 1 programming: Note: To clear outside the factory or previous program settings press and hold the program key and arrow key up/down until the light flashes twice and comes out. In the system press keys 3, 5, 7 press the program key enter your PIN (from 3 to 8 characters) press the key program to find the code button and light led indicator on top of your genie engine inside the garage. It is usually behind the light lens and close to a flexible antenna wire. If you do not have an air-door opening tool, you have an external receiver. The external receiver cover must be removed to access the code learning button and LED indicator. Open and enter the PIN, press the arrow key up/down and release it several times to activate the door. Once your keyboard is programmed, you can achieve your current PIN change by entering your current PIN and then press the program, enter your new PIN and press the program. You must now set the keyboard to the new PIN. Programming Intellicode 3 and Intellicode 2 Intellicode 3 (systems built from 2009 to July 2011) follow the steps from 1 to 5 above the press and hold the program box button (shown in the chart above) located at the bottom of the engine head, so both round leds and a blue turn roller. Release button. Only the LED round will be blue. (Note: If round, blue turns off and the light is long, starts purple flashing, go to help for Intellicode 2 below) press the button program box and release again. PURPLE LED LIGHTS MUST FLASH. Use the existing remote to unlock the system by pressing it only once. On the wireless keyboard enter the PIN and press the UP/DOWN arrow key 3, 4 or 5 times until the door is activated. Wait 30 seconds for the LED to turn off. Test by entering the PIN and pressing the arrow key up and down once. Intellicode 2 (systems built from July 2011 to the present) follow the steps from 1 to 5 click and hold the program square button (shown in the chart above) located at the bottom of the engine head, until the LED turns round BLUE and free the button. When you edit the blue light box button will turn off and the long purple button will start to blink. While the purple light is flashing (30 seconds) go to the keyboard, enter the new code you are programmed into the keyboard and press slowly and release the arrow key up/down several times until the door activates. Test by entering the PIN and pressing the arrow key up/down once. Change an existing code (PIN) to a new code Enter the existing PIN (personal code) and press the program key Enter the new PIN and The program key waits for the backlight to come out on the test keyboard by entering the new PIN and pressing the arrow key up/down. Programming Jenny Hardwired keyless access platforms (KEP1) (this keyboard has no cover and is connected to the internal receiver by a special bar.) the door keyboard outside the garage has an apartment tape, which slides behind the garage door pouring in, and relates to the keyless entry box. Behind the cover of the future is a key. Scroll the switch to SET. Enter your PIN on the external keyboard, followed by a star button. Slide the receiver adapter to play. Test your PIN code followed by the asterisk button. Domino's hard wired switchkeys are programmed on the box in the garage to the program. Press ENTER, then place in your code (up to 6 digits) and press ENTER again. Slide switch on the box in the garage to run. Test the keyboard.
