VersionenAktuelle VersionAlle Versionen60 BewertungenAktuelle Version60 BewertungenTurbo BewertungenTurbo C - This is a free C++ compiler from Borland. It comes with an IDE and debugger. NewFixed some bugs. Turbo CTech SpecificationsDeveloperOperating SystemsWindows Vista, 2003, XP, 2000, 98System RequirementsNo additional system requirements. Turbo C++ is one of the most important software specifically designed for programmers and computer science students that allows them to test and execute their codes. C/C++ languages are the basis for various programming-based applications and other languages and thus represent a very important place in the field of software development. C/C++ language is taught in almost every computer-related area and is therefore very important to understand all its basic concepts that can only be deleted if you practice by implementing your codes on C++ compiler and Turbo C++ is one of the most commonly used compilers currently. Considering the importance of Turbo C++ In our lives, I've already discussed Turbo C++ for Windows 64bit users in my previous posts, and here I'll once again provide Turbo C++ for Android users that allow Android users to compile their C++ programs on their Android phones or tablets. Get Turbo C++ for Android APK free download from here. How to install Turbo C++ on Android devices: Turbo C++ for Android APKInstalling Turbo C++ on Android devices is now much easier and within minutes you would be able to encode your programs on Turbo C++ without any problems at all and to do this, you need to go through the step by step procedure given below. First of all, you need to download Turbo C++ app file on your Android device - Click DownloadThe downloaded file will be in compressed format so you need to extract the contents of the .rar file and for extraction purposes you can install Easy Unrar app from Google Playstore. This is It after extraction you will see a folder TC with an APK file AnDosBoxInstall AnDosBox from the APK file and move the TC folder to your SD card and make sure that this TC folder must be in the SD card and not somewhere in subfolders. Run DosBox, which will look similar to the Windows like DOS Box and here enter the following commands one of one.cd tcdd bintcThat it is and if the process goes well, you will soon see a blue screen that will be your Turbo C++ encoding screen and you can now start writing your programs there. Related Searches :Turbo C for Android apk freeTurbo C++ Compiler for androidTurbo C++ App for Android Get Step by Step Guide to Downloading and Installing Turbo C++ for Android Platform. If you come from India and depart You started programming C/C++ at school, then you definitely used the Turbo C++ compiler. Many schools, colleges and institutions in India still prefer Turbo C++ for student teaching (don't know anything about other countries). I do not recommend you to use Turbo C++ Compiler for Android because it very outdated (approx. 23 years old). There is another option, such as C4droid, it's a great C/C++ IDE that supports the gcc compiler. So let us move on to the main subject on which I am writing this article. In Windows we use DosBox Emulator for turbo C++ for Android, in the same way we need an emulator for Android platform, which is known as AnDosBox. So without wasting a lot of time lets take a look at how we can use Turbo C++ for Android platform. Turbo C++ for Android - Steps to download and install 1. First download Turbo C++ for Android from link below specified: 2. It is compressed so you need to extract it. This can be done by any compression tool such as Easy Unrar. You can download it for free from the Play Store. 3. Now after extracting you will get a folder TC and an apk file AnDosBox. 4. Install AnDosBox and move TC folders in your sD card, remember that TC folder does not need to be in sD card in another subfolder. 5. Now open the already installed AnDosBox. It looks the same as DoxBox used in windows. 6. Enter lines or commands below and press Enter after each line. You can get the keyboard by pressing the option button on the left side of your device. tc 7. If everything is done

correctly, then after entering the last command, a blue screen will open and it is Turbo C++ for Android. You can control the pointer by moving your finger on the touch screen. To understand this tutorial easily, I've added a video below that will help you download and install Turbo c++ for Android. Now just go and install it, write and run your program and share your experiences with me. Feel free to ask if you get a problem. Note: If you cannot switch to the TC directory, move the TC folder to the internal store and try again. Comment below if you are having trouble downloading and installing Turbo C++ for Android. Happy coding!! ☺ ☺ ☺
