With a three-quarter-sized guitar, Baby Taylor lives on the side of the road. It also loves a little hand, which makes it an irresistible choice for kids taking the story. Available in either solid spruce or solid mahogany top. Sitka Spruce Top Sitka Spruce (Picea sitchensis) grows in the coastal pocket of Northern California Alaska. This dense, straight-grained wood has the highest strength and elasticity-to-weight ratio available in tone forests, an attribute that makes it an ideal material not only for our soundboards, but for our internal bracing, as well. Sitka produces a slightly brighter tone than does Engelmann. Sapele Laminate Back/Sides This extraordinary, mahogany-like wood grows throughout the tropical rainforests of Nigeria and ivory coast of Africa. Since we introduced it in 1998, this legion of fans has grown exponentially. Like toned wood, it's denser and heavier than a mahogany, so it has a crisper, clearer, brighter, pop-ier sound than its more familiar counterpart. Loud and forceful, cute taped sapele has been used by Spanish guitar makers for years. Dreadnought Body Shape Original Dreadnought acoustic guitar was released in the 20th century. Most subsequent Dreadnoughts, including Taylor's, are derivative of that early design. In 1997, however, Bob Taylor redesigned Taylor Dreadnought by softening curves at the top and bottom and generally refining its overall shape. In 2003, the glossy-finish Dreadnoughts also underwent bracing qualifiers that greatly increased their overall volume and bass response, without sacrificing Taylor's signature balance and clarity. Dreadnought six-strings shine like plectrum or rhythm guitars because they react well to flatpicking or light-to-heavy strumming. Varnish Finish Durable lacquer finish offers protection, good looks and a smooth touch. The beauty of the spruce cane shine right through. Through.
