## Manual wheelchair accessory push-rim activated power assist system

Manual wheelchair accessories, push-rim activated power assistance system Durable Medical Equipment (DME) E0986 is a valid HCPCS 2020 code for manual wheelchair accessories, push-rim active power assistance systems or only Man w/c push-rim powr systems in short, used in Used durable medical equipment (DME). E0986 has been in effect since 01/01/2015 Glide Power Assistance System is designed to help you achieve a new level of independence, operating like a manual wheelchair but with the help of a drive motor. The end result is a power assist wheelchair that has superior control over the steering and braking systems, maximizing user experience through facilitated access and ease of operation. Glide Power Assistance System is designed to help you achieve a new level of independence and operate like a manual wheelchair but with the help of a drive motor. Price From \$8,000.00 Go Distance... Have the energy to go where you want to go! Quickie® Xtender™ expands mobility range for manual wheelchair users by adding power-assisted wheels to manual frames. Xtender improves your travel distance and propulsion efficiency and reduces overall fatigue while allowing you to maintain manual wheelchair look, control and functionality. Download product flyer HERE Price From \$6,000.00 All convenience &amp; manual wheelchair transportation. All &amp;power; power wheelchair speed. The power you need... iXpress offers high-performance and reliable Power Add On System, transforming manual wheelchairs into compact and compact powered solutions. Whether you're going shopping, going to the movies or just hanging around with your family and friends quickie iXpress will really prolong the little pleasures of life. Price From \$8,600.00 e-motion – push rim-activated add-on that takes the strain out of e-motion combines active mobility with therapeutic benefits. Even wheelchair drivers with limited arms and body strength can regain their mobility with e-motion. The electric motor integrated in the wheel hub effectively supports wheelchair users who have to do less to travel greater distances or slopes. Prices Start at \$13,000.00 Turning your manual wheelchair into a compact electric wheelchair with an e-fix add-on drive. Drives can be programmed individually and therefore can be perfectly adapted to your personal needs. Electric add-on drive is a simple way to increase your freedom of movement. The e-fix also allows you to travel longer distances and handle slopes with ease. Price From \$13,000.00 SmartDrive is a revolutionary new power assistance device that is lightweight and easy to install to change You became an electric wheelchair. Price From \$10,250.00 Art Moves Explore the outdoors! Be independent and move freely! KLICK ELECTRIC is our powerful handbike that Take you on adventurous cruises, outdoor trips with friends and loved ones, shop in the city or help you do your daily activities. It is suitable for different settings and environments and thanks to its small turning radius, it is easy to maneuver in small places. Go for a ride! FreeWheel gives you mobility, freedom, freedom. Whether you have a rigid frame or a folding wheelchair, FreeWheel is your ticket to Freedom, Independence, and Improved Mobility. Your own electric drive The SMOOV is one of your own innovative electric drive that you can flexibly dock into your wheelchair whenever you need it. Technology that drives the future of wheel suspension systems in transportation for softer travel and improved performance. SoftWheel's innovative suspension system transforms the rider's wheelchair experience! SoftWheel can help reduce pain and provide a more comfortable ride, giving you the freedom to go where you want. Based on the unique and innovative features of e-motion, SADMERC creates a billing code – E0986 – Wheelchair Accessory Manual, Push Activated Power Assist effective January 1, 2004. e-motion push rim activated power assist has been successfully funded by Medicare/Medicaid, insurance companies and human age care organizations. E-motion is often the cheapest alternative to power wheelchairs. Why consider electric assistance? E-motion provides a less stressful way of self-propulsion for manual wheelchair users who need to protect and preserve the strength and function of their upper body necessary for progressive conditions and long-term use. It provides a more functional and cheaper option for power wheelchairs for people who still have some ability in manual wheelchair push. Without the additional option of a e-motion power assistance wheel, they will not be able to perform their MRADL inside the house. E-motion provides the ability to be more independent and secure while negotiating slopes, drop, ramps etc without assistance. Travel longer distances compared to manual wheelchairs. Medicare criteria for Power Assist: Push rim-enabled power assist devices (E0986) for manual wheelchairs are covered if all of the following criteria are met: All criteria for power mobility devices listed in the Basic Coverage Criteria section are met; and The patient has been pushing himself in a manual wheelchair for at least a year; and The Patient has had a special evaluation conducted by a licensed/certified medical professional, such as PT or PL, or a physician who has specialized training and experience in wheelchair rehabilitation evaluation and who documents the needs of at the patient's house. PT, PL or doctor may not have financial relationship with supplier; and Wheelchairs are provided by suppliers who use Professionals (ATPs) who specialize in wheelchairs and who have direct and direct involvement in the selection of wheelchairs for patients. Advice to Include for Justification for Power Assist: The client has difficulty pushing his manual wheelchair which prevents him from getting ready for work in the morning and then having enough energy to complete his maintenance needs at the end of the day. His shoulder pain was 7/10 during manual propulsion and he needed some rest which delayed him completing the force drop task needed to push and the use of power assist would ease his pain and allow him more efficiency in the morning ADL. It will also save her energy so that she can participate in her family's needs eventually. Adjustments to the seat have been made without changing the manual wheelchair access. A full electric chair is not required at this time. With the addition of a power activated power assist wheel, clients will be able to more efficiently complete their morning ADL and return to a reliable work schedule and have enough durability at the end of the day to participate in daily activities. Without papaw, access to work and daily needs will be risky: DO..., Focus on activities at home, Focus on how equipment has changed their participation, Use measurable explanation (shoulder pain report 3/5), Know the resilience that participants have at the end of the day Please see the sample letter of medical needs: LETTER OF MEDICAL NEEDS 1 LETTER MEDICAL NEEDS 2 LETTERS MEDICAL NEEDS 3 LETTERS MEDICAL NEEDS 4 Power Assist References: LCD (Local Coverage Determination) information for Clinical Practice Guidelines Mobility Devices Powerful: Preservation of Upper Limb Function in Spinal Cord Injuries www.pva.org Published in 2005 A consortium of professionals including practitioners, researchers, and educators Consolidated the study findings and linked them directly to 35 clinical practice recommendations in 6 specific categories Please see Preservation Guidelines for Upper Limb Function : PVA Upper Limb Preservation Consumer Guide PVA Upper Rim Preservation Professional Guide End User/Point and Click Agreement: CPT code, description, and other data copyright only 2009 American Medical Association (AMA).
