MN 55117 Phone: 651-788-4446, Fax All Records: 651-771-0083 Blue Star Ointment Review - What is it?warning: Blue Star Ointment until you read this review Don't buy! Is it really a scam? Blue Star Ointment has an official website that says this is the medicine chest in the bottle. However, there is no accurate information about the manufacturer, but it is known that the .C distributed by G.H. Group, LLC. San Antonio, TX 78283. Blue Star Ointment was invented in 1920 and has been placed on the shelves of drugstores, retailers and grocery stores nationwide since the 1960s. Let's take a look at the main ingredients of the ointment to understand if it really works. Blue Star Ointment Ingredients - Does it really work? So, I had to do my own research and I was able to find a complete list of inert ingredients too. They include benzoic acid, methyl salicylate, mineral oil, lanolin oil, paraffin wax, salicylic acid, wasaninim, and aloe oil extract. I don't know if these components are properly combined and safe for use, but if you look at this list of ingredients, not all of them are natural. Chemical compounds always carry potential dangers for human health, which can cause side effects and allergic reactions. The only active ingredient of Blue Star Ointment is Kamphor (1 gram of 12.4mg). Generally, it is made by distilling kusunoki trees and bark. Today, it can also be chemically produced from turpentine oil, which is further added to different products such as Blue Star Ointment, Vix VapoRub, etc. Usually, such products are rubbed against the skin. Camphol is used topically to reduce itching and relieve pain. It's useful.Of fungal infections of toenails, hemorrhoids, cold soles, warts, osteoarthritis. Camphor works by increasing blood flow in the application area to reduce swelling and pain causing skin irritation. For this reason, it is prohibited to apply substances to broken skin. Also, entering the body through the skin can cause poisoning very quickly. Alevere this compound is commonly used, in the United States in the 1980s, the sale of camphorate oil (20% camphor in cottonseed oil) was banned due to safety concerns. Kusunome stimulates nerve ends that cause itching and pain. According .com webmd, kusunoki is likely to be effective in relieving pain, skin itching and irritation when used at concentrations of 3% to 11%. It should be rubbed against the skin with insect bites and bites, cold soles, sputions and mild burns. There is insufficient evidence of efficacy in the treatment of fungus, warts, hemorrhoids and some other conditions of the toenails. Camphor needs more evidence to assess the effectiveness and safety of these applications. Customer Review - Are there any side effects? The risk of side effects is quite high because the product is not completely natural. It may not be effective enough to get rid of all of your skin problems. Blue Star Ointment is likely to cause sensitive skin irritation due to its formula. For sensitivity it is recommended to test the drug on a small area of the skin. If irritation does not occur, follow the instructions to use the product. But if there are some irritations, refuse from the use of this ointment and be appalled to consult a doctor.Blue Star Ointment is for use by adults and children over 2 years old. Never use this product for young children. When used in children, it is recommended to dilute with petroleum jelly to reduce the concentration of kusunoki,benic acid, salicylic acid and methyl salicylic acid contained in the product. Do not use Blue Star ointment on or near the nose, eyes, mouth, mucus membrane. Avoid swallowing the product, but if it happens accidentally, call the Poison Control Center as soon as possible and follow any instructions you get. This product can cause allergic reactions, the most common of which is irritation. Camphor, the active ingredient in Blue Star Ointment, is also dangerous for side effects such as irritation and skin redness. Do not apply kusunoki to broken skin because its absorption can reach toxic levels in the body and cause seizures and death. Children are particularly sensitive to the side effects of kusunome. Do not use this ointment during pregnancy or lactation. We'll take a look at the main ingredients ofBlue Star Ointment gave me a terrible reaction to all of my skin. It was very inflamed and burning red. I don't recommend this product to anyone. I rubbed it on my shoulder and stomach and my skin looked like after tanning. I had to take benadril and apply hydrocortisone cream to reduce redning. I immediately put it in some patch of ringworm on my arm, but soon I felt burning on my skin. So, I had to wipe it off. I can still feel it burning. I'm going to try out another product that's sold on Amazon. Blue Star Ointment was shipped very quickly, but the quality of the product will remain much needed. Cream doesn't help my ringworm at all. Too much baking, responsible for burning the skin, contains salicic acid where to buy Blue Star Ointment? Amazon sells Blue Star Ointment for Ringworm (2 ounces) for Free shipping is also available. My final summary I can't recommend Blue Star Ointment for usage because it has many drawbacks. My main concern is a lot of user complaints about the side effects they experience when using the product. Manu customers have reported that they do not feel any improvement in symptoms when using the product. I recommend looking for more effective and safe anti-itch drugs available on the market. Many doctors with affordable alternatives think that the problem can be solved well by another product known as Revitol eczema cream. I study many products of kind, so I totally agree with them! You will be pleasantly surprised.
