What topics does the Scion xA service/repair manual deal with? In total, there are over 3325 pages of content dedicated to your Scion xA. Here is a non-exhaustive list of what is covered: Scion xA road repair manual Scion xA owners manual covering weekly controls Scion xA workshop manual covering lubricants, Scion xA Pdf tire fluids and tire pressures covering Scion xA Engine routine maintenance and maintenance and associated service systems (for repairs and revisions) (PDF) Scion xA Transmission data Manual PDF Scion xA Brakes and suspensions PDF Scion xA Wiring diagrams looking for a free scion xA Haynes / Scion xA Chilton Manuals? We have a lot of people who come to the site trying to get a free xA Haynes scion manual. There are two things you need to know, firstly it is illegal and, secondly, there are much better ways to maintain and understand your Scion xA engine than the Haynes manual. That's essentially what we're here for -- to give you an alternative to Haynes Chilton, online and totally free of charge. Show more Show Less The odd looking, yet infinitely practical Scion xA (i.e. 10-A, folks) was produced by Toyota Motors and sold in the United States only for two years before being replaced by xD. Powered by a double head camera 1.5 L 1.5 four, was not known for power or speed (it estimated only 103 horsepower), but could go nearly 40 miles on a gallon of gas traveling on the highway (at 32 MPG, the city mileage was impressive too). The Scion xA is considered a sub-compact hatchback sedan, yet it looks like the result of an illicit tryst between an SUV and a minivan. Stylish isn't -- but there's still a lot to do if you're a pilot who appreciates practical considerations over style. There is room for the room for four passengers plus the driver (assuming they are all reasonably thin), and with an adhesive price of around \$13,000, the price was certainly fair. The engine, like the old Boxer the Horse at Orwell Animal Farm, is solid, robust and reliable. It has a lot to do, with two aerial cams, four valves per cylinder and multi-door fuel injection, all with excellent fuel savings. However, it is not fast. It takes almost 11 seconds to go from zero to 60, and while it is adequate for crossing the highway, it is preferable to have a manual transmission and knowledge of how to use it effectively. Generally, this is a vehicle for elderly retirees and small stable families - young drivers with a sense of adventure won't care at all. In fact, most of the buyers were people of advanced and older age. That said, it wasn't the most comfortable vehicle in the world. It was adequate at lower speeds, but at higher speeds, the steering and suspension system was not up to the handling of winding roads (which is why the Scion xA is not suitable for young drivers, likely to push it to its limits). This is the likely reason why the Scion xA lasted only two years in U.S. showrooms. Toyota's marketing department has decided to market it to young professional hipsters. It was a bad move. They would have done better to point to the crowd of over fifty people, who eventually bought it. It's not an adventurous trip by any means, but it's a practical, reliable (if unattractive) transport. For periodic repairs and maintenance, you'll find a complete catalog of Scion xA parts online at PartsGeek.com. All units are built with new 100% O-rings and high-quality HNR seals to prevent leaks. HNR does not break at high temperatures such as conventional sealing material. As part of the original regenerated equipment, this unit ensures a perfect fit of the vehicle. Final pump assembly is computer tested to measure bypass, fluid flow, valve operation, steering effort and noise to ensure reliable performance. Our regeneration process is earth-respectful, as it reduces by 80% the energy and raw material needed to make a new part. The shafts are on the surface according to precise specifications to eliminate premature wear of the seal and extend the life of the pump. The units come with 100% tested and and pressure discharge valves. Each unit has its main components tested or measured against the O.E. standard [Armor, field, bearing, parking switch or pulse board] - Then the final product is tested for each of its functions on the vehicle. Each motor bearing is re-impregnated or replaced as needed. Lubrication is applied to the output gear to provide maximum load capacity and long life. Motor magnets are 100% recharged for performance and reliability. Our regeneration process is earth-respectful, as it reduces by 80% the energy and raw material needed to make a new part. Welding weaknesses are 100% eslowed to extend life expectancy This part fits: Catalog: B Vehicle 2004 Scion xA 2005 Scion xA 2006 Scion xA Hood - Action Crash SC1230101PP Click to enlarge (Read reviews) Condition: New Quality: Capa Certificate - Ensures the right part, and lasts like the original. Each engine is 100% tested. The test includes loading the engine onto a simulated window device to check the speed and strength of the engine Each engine has its internal components inspected and measured. The bushings are measured and re-impregnated with lubricating oil, the ball bearings are replaced with new ones and the reinforcements are completely tested to ensure insulation Every regenerated engine is assembled with the precise amount of lubricant to ensure quiet operation and long life Each regenerated engine is fully compatible with the O.E. Mounting and regulator For engines that have an up/down car function, output signals and pulse count are paired with vehicle application and engines are shipped to full up position Internal gears are measured, inspected and renewed for reuse or replaced if out of specification. Replacement gears are redesigned with a more durable and less fragile material than O.E. to prevent premature wear, stripping and breaking Motor magnets are 100% recharged, ensuring efficiency and reliability Our regeneration process is earth-respectful, as it reduces the energy and raw material needed to create a new part by 80%.
