The R4 3DS card, sometimes called the R4i 3DS SDHC card is one of the first cards that worked on the Nintendo 3DS. Check the package you received to make sure you download the card firmware. Often you can look at the sticker on the card and compare it to the R4 3DS firmware files

that we have on our firmware page. Once you have a firmware file, you may need to download a shareware version of WinRar or 7-zip. Both will disconnect the archive for you and put it in a folder on your computer on your computer or Mac. You have to be very careful here. Most of the time, when you decompress and archive, it will create a folder that has exactly the same name as the archive itself. For exmaple, if the file that we have is called R4 3DS Firmware.rar then by default, most programs will create a folder called R4 3DS Firmware, and in this folder there will be a different set of files and folders. Most people copied the folder as it is, and keep all the separate files and folders there and then put the micro SD in my R4 and try to run it. Often this will bring the DOWNLOAD screen and it simply won't work. In this actual folder you need to take all the files and folders and copy them to the root of your micro SD card. By root we mean the main part of your micro SD. Other folder or file names must not be present. They would copy firmware files and run. Below you can see a screenshot of what your micro SD card should look like when you have copied all files and folders into the micro SD. These are just files and folders that you need to see when you first click on your micro SD card from my computer on your computer or finder on a MAC computer. You will notice that we have already included MoonShell for you, so that you can enjoy media and music from the beginning. 1. Insert the memory card into the card reader that you can get from the R4i 3DS package. 2. Insert the card reader into your computer. 3. Format the card by right-clicking it and selecting Format. Note: Click on Start, which you can find in the left corner at the bottom of the screen, click on My Computer, and then right-click on the memory card icon. 4. Select FAT 32 and get the check mark off quick format option then click Start. 5. Download only the latest version of R4i SDHC 3DS English or regional language pack you want to install. 6. Unheed the folder. Right-click and select Extract. Note: The extraction process requires winrar or winzip. (Expect to find files called moonmemo, R4iMenu, moonshl2, R4-'date'_ 7. Select all of these items and copy them. Note: Click-drag all four items, right-click on them and select Copy. 8. Copy all files to the memory card. Note: Right-click on the icon and select Paste. 9. Pull out the memory card and IN R4 3DS. There seems to be no good side that consolidates the collective knowledge and proper guidance for R4 DS, I'm trying to eliminate that. R4 Homepage R4 DS SDHC What is R4 DS? R4 DS is a Slot-1 (Nintendo DS Cartridge style) card that takes a MicroSD card to store Homebrew applications and Nintendo DS Roms. How do I set up R4 DS? So, you got your hands on one, you got your MicroSD card, what about now? R4 does not have built-in storage for its software, keeps all the necessary files on the MicroSD card, this allows for easy upgrades and the potential for damage has kept it extremely low. The system software for R4 DS is called kernel, download the kernel files from the relevant R4 or R4 SDHC home page above (the kernels are unique to each device). Download the latest kernel files from the appropriate home page for your device above. Loading microSD into a reader, turn on your computer. Unsephees the contents of the kernel folder to the MicroSD card. Pull out the microSD card from your computer, insert microSD into R4, and then Insert R4 to DS. Start DS, you must be presented with an extremely ugly launcher screen. How do I use R4? Let's talk about the launcher, here are 3 elements that represent: NDS, Moonshell, and Boot Slot-2 applications. NDS Applications This section will allow you to browse the files on the . NDS files that are either Homebrew applications or Games in the form of ROM files. Home Okay, my second post :) Pretty excited to have your website up here, and to be able to help and give some cool reviews and reviews and comment on some of the things that I love the most. Ok. I searched youtube to find a cool video on how to set r4 ds card and r4i card. I've watched probably far too many videos to say it's productive, but the one that seems to have the most views (and the most thumbs up) seems to be the R4 DS firmware setup video. It covers where to go to download firmware, how to extract the firmware and put it on the card, and some small tips and tips thrown in to good measure. You can check the R4 ds firmware setup video by clicking the link. Next, one of the things I struggled with before I got my R4 3DS card for my 3DS was which card should I buy. I was pretty much set to the R4 brand or the Acekard brand. With acecardide, it's an easy choice. There's only one card. But if you want something that costs less and does all the same things, you should look at the R4 3DS or R4 DS card and finally, for DSi XL owners out there R4i SDHC Card. Here's a breakdown of which card works on which system. 1. R4 DS Card - This is a card that works on Nintendo DS and Nintendo DS lite. And that's where it stops. It will not work on any of the newer DSi or DSi XL systems. So get this card only if you have DS or DS Lite (or have kids with DS or DS Lite) 2. R4i SDHC card - If you have a Nintendo DSi or DSi XL, then the R4i card of choice appears. Seems. works on these hands, but it is also compatible with the first DS and DS lite too. Back compatible if you want. 3. R4 3DS - This is the one I have, and it's new. It was made when the Nintendo 3DS came out. You could say it was designed for nintendo 3DS consoles. But like the R4i SDHC, it also works on DSi, DSi XL as well as DS and DS lite. If you get this card, you'll be set up, regardless of the system you have, and give you room to grow if you're going to get a newer system. You can still place about 20 games at 2gb, so it's still worth it.in you used a microSD card you formatted it?
