These starters are simple to install but require complex wiring. To wire one accurately, refer to the wiring diagrams included with your remote initiator. Incorrect wiring leads to mechanical problems, including engine failure. Remote starters usually install on automatic vehicles only and cannot be installed on a vehicle with manual gearbox. Place the control unit in the passenger compartment behind the dashboard at a distance of 24 inches from the ignition switch of the cable beam. Press the control unit into the passenger compartment and highlight the position of the mounting brackets with a pointer. Drill the holes in the cabin markings using a drill. Push the control unit into the holes. Place the hood pin switch under the hood. Drill a hole, 1/4 inch in diameter, and press the cocoon pin switch into the hole. Secure the switch using a 7/16 inch nut. Install the control switch on the bottom dash panel using the same techniques that you used when you mount the control module. Wire the leash. Connect the vehicle battery cables to the red remote start switch. Connect the yellow starting output cable to the vehicle side of the starting relay next to the ignition switch. Connect the black cable to the ground source of the vehicle. Consult the wiring diagram in the instruction manual for additional wiring instructions. Drill Installation Manual (optional) APS997Z two-way LCD command confirming remote start/keyless entry and security system with up to 1 mile operating range Prestige Upgradeable Prestige Transmitter Kit Security Systems Prestige Remote Start Car Safety Systems and Remote Boot Accessories
