History and creation In 1974, the Brazilian army issued a major contract for the Beretta 92, for which Beretta established a factory in Sao Paulo, Brazil. This factory was subsequently sold to Brazilian gunman Taurus (Forjas Taurus S/A) in 1980, after the contract had expired. Shortly the day after, Taurus closed the factory and transferred Beretta's original machinery to his factory in Porto Alegre, Rio Grande do Sul, using it to make his own pistol, which were a copy of Beretta 92's original design, which was no longer produced in Brazil. They did so without a license and also did not have to pay royalties, as the designs and patents had expired since then. [1] Design Like the Beretta, the Taurus PT92 uses the open slide design where the top of the slide is cut exposing much of the barrel itself. The original PT92 was, in most respects, exactly like the original Beretta 92, it was also unusual for the time when it featured a square trigger protector to support the index finger of the opposite hand shot, a feature that was later introduced in the Beretta 92 with the 92SB-F (92F) model in 1985. Taurus PT92 is less expensive than Beretta 92 in most cases. The Taurus PT92 has undergone many design revisions since it was originally produced in the early 1980s. Originally, the first models of the PT92 (made between 1982 and 1983) were almost exact copies of the original Beretta 92, with non-ambidextrous safety, round trigger protector and, more notably, the release of the magazine on the heel of shiny plastic tweezers. However, this design was soon replaced by the release button at the base of the trigger protector, the most common magazine capture location in today's industry. However, the accessories market magazines for the Taurus PT92/Beretta 92 often have cuts for both magazine releases. The first PT92 and PT99 did not present the third safety position decocker that is now standard; this feature was added to second generation models in the early 1990s, which also included the three-point sights found on the Beretta 92F. A third revision in the late 1990s changed the grip and slip design (which now has wider cocking saws than PT92s manufactured before 1997). More recently (as of 2005), Taurus has started manufacturing the PT92 with a thicker trigger protection hook and accessory rails built into the frame, a feature found in the new Beretta M9A1, a military update of the Beretta 92 from which the PT92 is derived. While 15-round magazines were standard for the PT92 for many years, Taurus now manufactures 17-round gun magazines to give it a firepower comparable to the Glock 17, and 30-round magazines from the aftermarket are also available. Despite many design changes, the Taurus PT92 still retains many of the design elements of the original Beretta 92, such as the trigger shape. Other versions of the PT92 include the PT99, which has an adjustable rear sight and a higher front sight, the compact PT92C, and the PT100 and PT101, which are .40 S&W versions of the PT92 and PT99, respectively. [2] Variants 7.65mm (.32 auto) PT57, described as a small brother to the PT92, the PT57 is on camera at .32 ACP (Auto) and has a charger capacity of 12+1. .380 ACP PT58, compact model with .380 ACP camera and has a capacity of 19+1. 9mm Parabellum PT92, bluish finish, wooden or black plastic handles, three-point fixed sights; Factory magazines of 10, 15 or 17 cartridges available. PT92AF, lightweight alloy frame, five-inch gun, wooden or plastic grips fixed three-point sights. Factory magazines of 15, 15 or 17 rounds available. (Ambidextrous safety lever; F. Pin Lock) PT92AFS, lightweight alloy frame, polished stainless steel slide, decocker, frame mounted accessory rail, five-inch gun, wooden grips, three-point fixed sights. 17-round magazine. (A - ambidextrous safety lever; F - pin lock; S - Stainless Steel PT92SS, stainless steel finish, black rubber grip panels to box, three-point fixed sights. Factory magazines of 15, 15 and 17 rounds available. PT92C, compact model with 4-inch gun, wooden or black plastic handles, three-point fixed sights. Twelve factory magazines available. PT99, bluish or satin nickel finish, wooden or black plastic handles, adjustable rear sight. All PT99 variants are compatible with PT92 chargers. PT99AF, bluish or satin nickel finish, black or wood plastic grips, lightweight alloy frame, 4.75 inch gun, adjustable rear sight. PT917C, compact version with 4-inch gun, bluish finish, alloy frame, three-point fixed sights. Seventeen and 19 cartridge factory magazines available. The 19-round magazine extends one inch below the handle. PT917CS, compact version with 4-inch gun, stainless steel finish, alloy frame, three-point fixed sights. Seventeen and 19 cartridge factory magazines available. The 19-round magazine extends one inch below the handle. Supplied with a 17-round and 19-round factory charger. .40 Smith & Wesson PT100, .40 S&W version with 3-point fixed sights. Factory magazines of 10 or 11 cartridges available. Pt101, .40 S&W version with adjustable rear sight, compatible with PT100 chargers. Argentine users: PT92 and PT917, in some detachments you can use a standard side gun of Police of the Province of Buenos Aires since 2009. Brazil: PT92, standard Brazilian Army weapon, Military Police and National Public Security Force. It is designated as an M975 pistol in military service troops. Chile: Used by Carabineros de Chile. Dominican Republic Israel: Mishteret Y'Israel, Israeli Civil Police of Jerusalem District issued taurus PT92C [3] Libyan Indonesia[4] Malaysia Paraguay: Gradually retired from service being replaced by Glock Models as the standard side arm of the Peruvian Army and Police: PT92AFD and PT92AFD-M, standard side arm of the Peruvian Army, Special Forces. Using a hammerless design, fired by a striker, these pistols are manufactured by Forjas Taurus S/A (Taurus Forge) in Porto Alegre Brasil and distributed in the United States by its subsidiary Taurus USA. The 24/7 product line was designed for the civil hidden firearms market, and as backup weapons for law enforcement officers. [1] In 2016, the PT24/7 was included in the settlement of a lawsuit alleging that she, and some other Taurus pistols, could accidentally fire if dropped and that Taurus covered security flaws. Without admitting guilt, the company paid $39 million, extended the guarantees and withdrew the guns for repair. [3] As of April 2017, the manufacturer's website says it is no longer being manufactured. [4] Design features The 24/7 gun features an injection-molded polymer frame with bluish carbon steel, stainless steel or titanium slides. Available cartridge cameras include 9×19mm Parabellum, .40 Smith & Wesson and .45 ACP. Charger capacities range from 6, 10, 12, 14, 15 and 17 cartridges depending on model and caliber. [5] PT 24/7 pistols share several safety innovations with other Taurus product lines, including a positive firing block as well as the 'Taurus Safety Latch', a transfer bar safety that prevents the gun from firing unless pulled off the trigger. Together, these safes ensure that the gun will not fire if accidentally dropped; selected models have been certified as meeting California's fall safety requirement. In 2016, the guns were removed due to a failure of this safety feature. All 24/7 models also include a rack-mounted manual safety lever, and are equipped with an integrated firearm locking safety system, which Taurus calls the Taurus Safety System (TSS). [6] The 24/7 pistols are also equipped with a visible/touch camera indicator and a Picatinny accessory rail integration system allowing the attachment of accessories such as laser sights or tactical lights. The sights of the 24/7 pistols vary by model, the basic models are equipped with fixed open iron sights with a single point of high contrast/visibility in the front sight. Three-point sights and Heinie 'Straight Eight' combat sights are available for Pro and OSS models, as well as Tritium nightlife attractions. The handling characteristics of the 24/7 pistols are reinforced by features such as an ambidextrous decocking lever and an ergonometric design that Taurus calls 'Memory Pads', which consist of several slots that promote proper hand placement for superior handling control. [7] In addition, a secure grip clamping of the gun is offered by a high grip grip surface. An option on basic guns selected 24/7 and standard on Pro models is a soft, ribbed, non-slip, hand-compliant grip that Taurus nicknamed the 'Ribber'. [5] Shooting Actions Previous standard versions of the 24/7 pistol were equipped with single-action triggers (after a long shot), since once the slide is screwed, the firing pin/striker is ready to fire and there is no mechanism to free it from pulling the trigger. This system differs from most double-action triggers in that the initial pull is single-action with the double action coming into play only in a shooting error. Most dual-action triggers are double-action in the initial shot, with subsequent single-action shots. This system allows two great advantages; one is that the initial trigger pull is light and sharp, therefore more controllable, and the second is that if a round fails, the trigger can be quickly pulled back into double action mode, repeating the attempt to fire the recalcitrant round. This type of SA/DA system, a pioneer in Taurus pistols, is much faster and easier than the standard method of tap, rack and bang cleaning a cleaning cartridge. Later Pro DS models and some of the OSS pistols feature a unscrew lever to safely release the striker, even in a live round, requiring a double-action pull for the first shot. This feature gives the shooter the option to use the gun in a more traditional DA/SA way, which, of course, still defaults to double action in case a cartridge does not fire. [8] The OSS series The United States Special Operations Command (USSOCOM) issued the requirements in 2005 for a new ACP .45 service gun and asked interested firearm manufacturers to submit models for field test tests. With a large U.S. government defense contract for up to 650,000 related guns and accessories on the scale, Taurus was one of many companies to respond, featuring an improved 24/7 design that called the model 'OSS'. When the USSOCOM application was initially delayed, and eventually stopped indefinitely, Taurus decided to offer his to the civilian market[9] where it attracted a lot of attention and popularity, eventually winning the National Rifle Association (NRA) Pistol of the Year award in 2005. [10] OSS models feature a 5.25-inch phosphor-grade forged gun [11] and a 3-position safety system - the lower position allows the gun to fire, the center setting puts it in 'safe' 'safe' and the top brazen front. This arrangement results in several transport options for the user, as the weapon can be carried with a round on the 'cocked and locked' camera in 'Condition one' (striker cocked with safety on), or the 'Condition Two' (striker decocked and safety off, which requires a revolver-like DA to cock and fire the gun), or even with the front decocked and safety on. The OSS retains the loaded camera indicator of the other models 24/7, and also allows visual verification that the gun is ready to fire as the front can be seen when the gun is cocked.
