It is an early example of the platform game genre, as the game focuses on maneuvering the main character through a series of platforms while dodging and jumping obstacles. In the game, Jumpman (since Mario was renamed) must rescue a damsel in distress, Lady (now called Pauline), from a giant ape named Donkey Kong (who would later become Cranky Kong). The hero and ape later became two of Nintendo's most popular and recognizable characters. Donkey Kong is one of the most important Golden Age titles of Video Game Video Games, and became one of the most popular arcade games of all time. Donkey Kong is one of the first examples of the platform gaming genre; it is sometimes said to be the first platformer, although it was preceded by Space Panic. Unlike Space Panic, however, Donkey Kong was the first platformer to feature jumps, introducing the need to jump between gaps and over obstacles or approach enemies, setting the template for the platform genre. Video gamers and competitive referees underline the high level of difficulty of the game compared to other classic arcade games. Winning the game requires patience and the ability to accurately time Jumpman's rise. In addition to presenting the goal of saving the Lady, the game also gives the player a score. Points are awarded for finishing screens; jumping on obstacles; destroy objects with a power-up hammer; collect items such as hats, umbrellas and handbags (apparently belonging to the Lady/Pauline); and complete other tasks. The player usually receives three lives with a bonus awarded for the first 7,000 points, although this can be modified via the game's built-in DIP switches.
